Dimming function

※ Three-in-one dimming function (S version only)

A. To adjust the output current, applying one of the three methods between DIM+ and DIM- : a resistor of 0-100K, or any voltage of 0-10V , or a PWM signal with amplitude of 10V. .

B. output current of dimming port: 100uA (typical value).

Remark:

1. It is recommended to use 1-10V and the equivalent 3-in-1 dimmer, and the default state is to dim-off but can't meet the requirement of less than 0.5W standby power. If it is no need to be turned off, please contact the technicians for help.
