- ✓ silicone-free
- ✓ suitable for trailing chain
- ✓ M12, straight and angular
- ✓ 3-pin assignment
- ✓ degree of protection IP67

high temperature-cable sockets
temperature range up to +150°C

desription

Inductive high temperature sensors for an enlarged operating range up to +150°C with M12-connector have been available for many years at **ipf electronic**. Now we can also offer you appropriate cable sockets for this temperature range.

The cable contains three wires, while the wire cross-section is 0.34mm². The outer sheath of these cable sockets consists of electron beam cross-linked polyolefin copolymer and is silicone-free, of course. They are suitable for an installation in trailing chains.

In case of flexible cable installation a minimum bending radius of 5 x Ø has to be observed.

The cable sockets are available in lengths of 2, 5 and 10m, each in straight and angular version.

The degree of protection is IP67.

application examples

- ideal for use in high temperature environment and heavy meachanical load
- use with **ipf**-high temperature sensors
