Flow sensors • Sensors for air

Sensor flow, air, calorimetric, 80x61x30mm, G 1/2 "mm, 12-24V DC, cable tail 2m PVC, plastic PC, pressure resistance 15bar, 5-1000l/min, with LCD display, parameterization, IP40, integrated pressure sensor

LCD display integrated pressure sensor

The function of the flow sensor is based on the calorimetric principle. The sensor is heated by a few degrees Celsius from the inside in relation to the flow medium into which it projects. If the medium flows, the heat generated in the sensor is dissipated by the medium. The temperature generated in the sensor is measured and compared with the temperature of the medium, which is also measured. The flow condition for each medium can be derived from the temperature difference obtained. Applications for these sensors include monitoring cooling systems, ventilation systems, dry running of pumps and monitoring the presence of liquid or gas flows.
