

HTU318

Ultrasonic sensors with 2 switching outputs

en 01-2017/02 50135816

50 ... 400mm
150 ... 1600mm

10 - 30 V
DC

- Function largely independent of surface properties, ideal for detection of liquids, bulk materials, transparent media, ...
- Small dead zone at long scanning range
- Adjustment of the switching point can be taught
- NO/NC function reversible
- 2 independent switching outputs (PNP or NPN)
- **NEW** – Both outputs can easily be taught using a button
- **NEW** – Stable plastic design
- **NEW** – Temperature-compensated scanning range

Accessories:

(available separately)

- Mounting systems
- Mounting adapter M18-M30: BTX-D18M-D30 (Part no. 50125860)
- Cables with M12 connector (KD ...)

Dimensioned drawing

- A** Active sensor surface
B Teach-in button
C Indicator diodes

Electrical connection

10-30 V DC +	1	BR / BN
OUT 2	2	WS / WH
GND	3	BL / BU
OUT 1	4	SW / BK
Sync / MUX	5	GR / GY

Order guide

The sensors listed here are preferred types; current information at www.leuze.com.

	Designation	Part no.
Scanning range / switching output / teach-in		
50 ... 400 mm / 2 x PNP / teach button	HTU318-400.3/4PK-M12	50136082
50 ... 400 mm / 2 x NPN / teach button	HTU318-400.3/2NK-M12	50136083
150 ... 1600 mm / 2 x PNP / teach button	HTU318-1600.3/4PK-M12	50136088
150 ... 1600 mm / 2 x NPN / teach button	HTU318-1600.3/2NK-M12	50136089

Device functions and indicators

All settings on the sensor are taught-in via the **teach button**. Device status and switching states are indicated as follows by means of 3 LEDs:

Switching behavior

Note!

The switching behavior is not defined in the dead zone.

Switching behavior with 2-point window-teach as a function of the switching function

Switching function configured as	First taught object distance	Second taught object distance	Output switching behavior
NO (normally open)	Close	Far	
	Far	Close	
NC (normally closed)	Close	Far	
	Far	Close	

HTU318

Ultrasonic sensors with 2 switching outputs

Adjusting the switching points via the teach button

The switching points of the sensor for both outputs are set to 400mm or 1600mm (static 1-point teach) on delivery.

By means of a simple operating procedure, the switching points for each output can be individually taught to an arbitrary distance within the scanning range with 1-point teach (static) or 2-point window-teach (static).

Moreover, the output function can be switched from NO contact (NO - normally open) to NC contact (NC - normally closed). An LED is permanently assigned to each output for the setting.

Selecting the output that is to be taught: OUT1 or OUT2

1. Press the **teach button** for **≥ 2s** to **activate teach mode**. The **yellow LED (OUT 1)** flashes at 1 Hz.
While in this state, **output OUT 1** can be taught.
2. To teach **output OUT 2**, **briefly** press the **teach button** again. The **blue LED (OUT 2)** now flashes at 1 Hz.
While in this state, **output OUT 2** can be taught.
3. Briefly press the teach button again to toggle between outputs **OUT 1** and **OUT 2** in this state. The flashing LED indicates which output is ready for teaching:
yellow LED flashing = OUT 1 ready for teaching,
blue LED flashing = OUT 2 ready for teaching.

Teaching output OUT 1 or OUT 2

First activate the previously described teach mode for output OUT 1 or OUT 2.

1-point teach (static)	2-point window-teach (static) ¹⁾
1. Place object at desired switching distance.	1. First, place object at desired switching distance for switching point 1 .
2. To adjust the selected output, press the teach button for 2 ... 7s until the yellow LED (OUT 1) or blue LED (OUT 2) flashes at 3Hz. The current state of the selected output is frozen during the adjustment process.	2. To adjust the selected output, press the teach button for 7 ... 12s until the yellow (blue) and green LEDs flash alternately at 3Hz .
3. Release the button. The current object distance has been taught as the new switching point.	3. Release the button. The sensor remains in teach mode and the LEDs continue to flash.
4. Error-free teach: LED states and switching behavior according to the diagram shown above. Faulty teach (object may be too close or too far away – please note scanning range): green and yellow (blue) LEDs flash at 8Hz until an error-free teach event is performed. The selected output is inactive as long as there is a teaching error.	4. Then, place the object at the desired switching distance for switching point 2 . Note: The minimum distance between the switching points is as follows: scanning range of 400mm: 40mm scanning range of 1600mm: 160mm
	5. Briefly press the teach button again to complete the teach event. The switching window for the selected output was taught in.
	6. Error-free teach: LED states and switching behavior according to the diagram shown above. Faulty teach (object may be too close or too far away – please note scanning range): green and yellow (blue) LEDs flash at 8Hz until an error-free teach event is performed.

1) See table "Switching behavior with 2-point window-teach as a function of the switching function"

Adjusting the switching function (NC/NO) via the teach button

The switching function of the sensor is preset as follows on delivery:

- **OUT 1: NO contact**
- **OUT 2: NC contact**

The output function for each output can be individually switched from NO contact (NO - normally open) to NC contact (NC - normally closed) and vice versa. If the switching function is changed, the switching output is changed to the opposite state (toggled).

First activate the previously described teach mode for output OUT 1 or OUT 2.

Changeover of the switching function
1. To change the switching function of the selected output, press the teach button for longer than 12s. The current state of the selected output is frozen during the adjustment process.
2. The green and yellow (blue) LEDs flash alternately at 3Hz. If the yellow (blue) LED is ON afterwards, the selected output operates as an NO contact . If the yellow (blue) LED is OFF afterwards, the selected output operates as an NC contact .

HTU318

Ultrasonic sensors with 2 switching outputs

Synchronization of multiple HTU318 ultrasonic sensors

If adjacent ultrasonic sensors receive the signals of other sensors, so-called crosstalk occurs, which leads to faulty measurement results. Through temporal synchronization of the adjacent sensors, this can be avoided. Via the **Sync/MUX** input, the HTU318 ultrasonic sensors can be synchronized in 2 different ways:

Synchronous operation

In this operating mode the mutual interference of adjacent sensors can be avoided. For this purpose, up to 6 sensors of the same type are wired together in a network according to the following diagram.

The devices work in synchronous operation with a **simultaneous transmission pulse**. The response time of the individual sensors in the network corresponds approximately to that of a single sensor. However, an additional delay time of approx. 20ms occurs in comparison to the specified response time in standard operation.

Synchronous operation wiring schematic

NOTE

Please make certain that the wiring is performed according to the connection diagram. **Sync/MUX** pin 5 on all sensors in the network must be connected to one another. Generation of the synchronization signal for all sensors in the network occurs automatically.

Multiplex operation

In this operating mode the mutual interference of adjacent sensors can be reliably avoided. For this purpose, up to 4 sensors of the same type are wired together in a network according to the following diagram.

The devices operate in multiplex operation with a **cyclically time-delayed transmission pulse** and are switched to a passive state outside of the active phase, whereby the states of the outputs are frozen until the next active phase. The response time of the individual sensor in the network is therefore extended with respect to the response time of a single sensor as follows:

Response time in the network = (Response time of sensor * n) + 25ms (n = number of sensors in the network)

Multiplex operation wiring schematic

Resetting to factory settings

The sensor can be reset to the factory setting (one switching point each at 400 mm or 1600 mm).

Resetting to factory settings
1. When switching on the supply voltage (during power-on), press the teach button for > 5s.
2. Release the button. The green, yellow and blue LEDs flash alternately and very quickly for a brief time. The sensor was reset to the factory setting: switching output OUT 1: NO contact, 1 switching point at 400 mm or 1600 mm (static 1-point teach), switching output OUT 2: NC contact, 1 switching point at 400 mm or 1600 mm (static 1-point teach).
