	1.	All parameters NOT specially mentioned are measured at 12, 48VDC input, rated load and 25°C of ambient temperature.													
	2.	Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.													
	3.	Tolerance : includes set up tolerance, line regulation and load regulation.													
	4.	The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 230mm*230mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (available on <a href="http://www.meanwell.com">http://www.meanwell.com</a> )													
	5.	To insure proper operation, a 47uF/100V electrolytic capacitor with Esr <1 Ω must be added to the input line.													
	6.	EMC filter suggestion(TBD):													
7. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
