

## Features

- Universal AC input / Full range
- Fanless design, 400W convection
- Modular design, optional configuration available
- Slim and 1U low profile
- No minimum load required
- Protections: Short circuit / Overload / Over voltage / Over temperature
- -30 ~ +70°C working temperature
- LED indicator for power on
- 3 years warranty

## Description

The UMP-400 series is the break-through 1U height modular power supply from MEAN WELL, and it can deliver up to 400W maximum output power with convection cooling only. The front-end can function as an independent 400W 24V or 48V single output power supply, and it can be configured into a multi-channel modular power supply by incorporating the NID series non-isolated DC-DC converters, which are also standalone standard products that can be purchased and used separately. The NID output modules can deliver up to 100W with adjustable options for the major working voltages used in the industry, including 5V, 12V, 15V and 24V. In addition, the UMP-400 series is certified to ITE 62368-1 safety standards, and is designed to meet medical (2xMOPP) safety standard, thus offering the best flexibility for various types of applications.

### Note:

- 1: NID35/65/100-24 modules are intended for UMP-400-48 only.
- 2: Only UMP-400-24 can be configured with negative output voltage modules.
- 3: Only output channel 4(V4) may be configured as negative voltage.

NOTE	1. All parameters NOT specifically mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1 $\mu$ f & 47 $\mu$ f parallel capacitor. 3. Tolerance: includes set up tolerance, line regulation and load regulation. 4. De-rating may be needed under low input voltages. Please check the derating curve for more details. 5. The efficiency changes by installing different output modules. 6. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m (6500ft). 7. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 450mm*450mm metal plate with 3mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." - When V4 is configured as positive output, Pin7 of TB2 is the common ground reference(COM).  
When V4 is configured as negative voltage, Pin8 of TB2 is the common ground rererence(COM).
- TB2 is installed only when multiple output sets are selected.

**■ Installation Instruction**

For heat dissipation, at least 5cm installation clearance keep-out area around the PSU should be kept and the top side must be face up, shown as below:
