

Product description

- The mic+ Sensor with one analogue output and one switching output measures the distance to an object within the detection zone contactless. A signal proportional to distance is created and the switching output is set according to the adjusted detect distance.
- The sensor automatically detects the load put to the analogue output and switches to current output or voltage output respectively.
- All settings are done with two push-buttons and a three-digit LED-display (TouchControl).
- Three-colour LEDs indicate all operation conditions.
- Choosing between rising and falling output characteristic as well as output function NOC and NCC is possible.
- The sensors are adjustable manually

via TouchControl or via Teach-in procedure.

- Useful additional functions are set in the Add-on-menu.
- Using the LinkControl adapter (optional accessory) all TouchControl and additional sensor parameter settings can be adjusted by a Windows® Software.

The mic+ Sensors have a blind zone in which distance measurement is not possible. The operating range indicates the distance of the sensor that can be applied with normal reflectors with sufficient function reserve. When using good reflectors, such as a calm water surface, the sensor can also be used up to its maximum range. Objects that strongly absorb (e.g. plastic foam) or diffusely reflect sound (e.g. pebble stones) can also reduce the defined operating range.

Safety Notes

- Read the operating instructions prior to start-up.
- Connection, installation and adjustment works may only be carried out by expert personnel.
- No safety component in accordance with the EU Machine Directive

Proper Use

mic+ ultrasonic sensors are used for non-contact detection of objects.

Synchronisation

If the assembly distances shown in Fig. 1 for two or more sensors are exceeded the integrated synchronisation should be used. Connect Sync/Com-channels (pin 5 at the units receivable) of all sensors (10 maximum).

mic+25...	≥0.35 m	≥2.50 m
mic+35...	≥0.40 m	≥2.50 m
mic+130...	≥1.10 m	≥8.00 m
mic+340...	≥2.00 m	≥18.00 m
mic+600...	≥4.00 m	≥30.00 m

Fig. 1: Assembly distances, indicating synchronisation/multiplex

- Detecting distance at operating range
- Measurement range set to maximum range

Maintenance

mic+ Sensors work maintenance free. Small amounts of dirt on the surface do not influence function. Thick layers of dirt and caked-on dirt affect sensor function and therefore must be removed.

Notes

- mic+ Sensors have internal temperature compensation. Because the sensors heat up on their own, the temperature compensation reaches its optimum working point after approx. 30 minutes of operation.
- If an object is within the set window limits of the analogue output, then LED D1 lights up green, if the object is outside the window limits, then LED D1 lights up red.

- The load put to the analogue output is detected automatically when turning supply voltage on.

- During normal operating mode, a yellow LED D2 signals that the switching output has connected.

- During normal operating mode, the measured distance value is displayed on the LED-indicator in mm (up to 999 mm) or cm (from 100 cm). Scale switches automatically and is indicated by a point on top of the digits. Alternatively a percentage scale may be set in the add-on menu. In this connection 0% and 100% correspond to the set window limits of the analogue output.

- During Teach-in mode, the hysteresis loops are set back to factory settings.
- If no push-buttons are pressed for 20 seconds during parameter setting mode the made changes are stored and the sensor returns to normal operating mode.

Show parameters

- In normal operating mode shortly push T1. The LED display shows »Par.«

Each time you tap push-button T1 the actual settings of the analogue output are shown.

Operating Manual mic+ Ultrasonic Sensors with one switching output an one analogue output

mic+25/DIU/TC
mic+35/DIU/TC
mic+130/DIU/TC
mic+340/DIU/TC
mic+600/DIU/TC

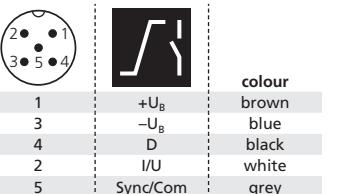

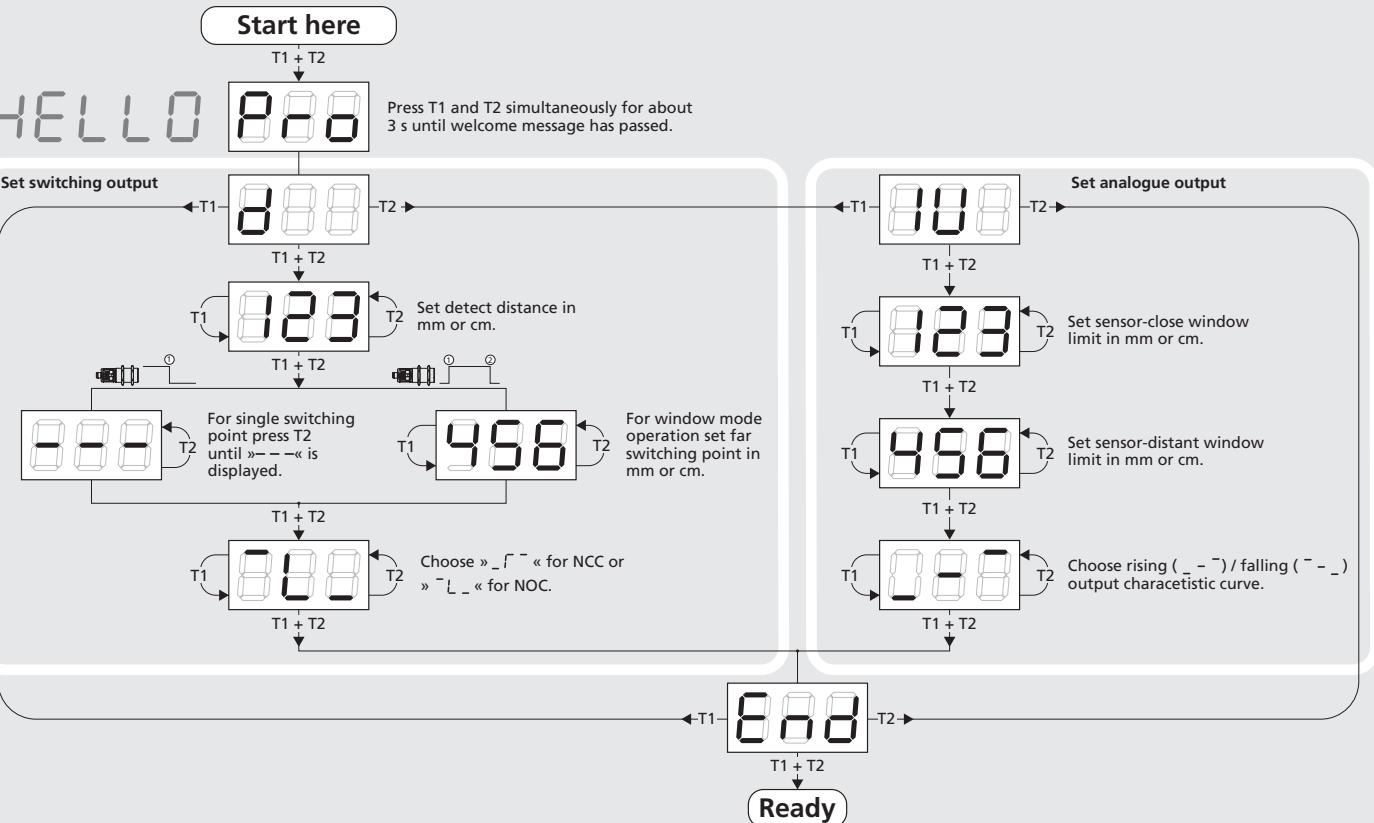

Fig. 2: Pin assignment with view onto sensor plug and colour coding of the microsonic connection cable

Start-up

- Connect the power supply.
- Set the parameters of the sensor manually via TouchControl (see Fig. 3 and Diagram 1)
- or use the Teach-in procedure to adjust the detect points (see Diagram 2).

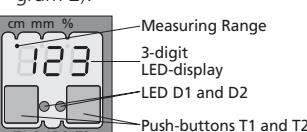

Fig. 3: TouchControl/LED display

Factory setting

- Rising analogue characteristic
- Window limits for the analogue output set to blind zone and operating range
- Switching output on NOC

¹⁾ Can be programmed via TouchControl and LinkControl. ²⁾ With TouchControl and LinkControl, the selected filter setting and the maximum range influence the switching frequency and the response time.³⁾ Can be deactivated via LinkControl.

Enclosure Type 1
For use only in industrial
machinery NFPA 79 applications.

The proximity switches shall be used with a
Listed (CYN/7) cable/connector assembly
rated minimum 32 Vdc, minimum 290 mA, in
the final installation.
