Mitsubishi Electric AC Servo System MELSERVO-J5

Innovate Together

MITSUBISHI ELECTRIC SERVO SYSTEM

MELSERVO-J5

GLOBAL IMPACT OF MITSUBISHI ELECTRIC

Through Mitsubishi Electric's vision, "Changes for the Better" are possible for a brighter future.

Changes for the Better

We bring together the best minds to create the best technologies. At Mitsubishi Electric, we understand that technology is the driving force of change in our lives. By bringing greater comfort to daily life, maximizing the efficiency of businesses and keeping things running across society, we integrate technology and innovation to bring changes for the better.

Mitsubishi Electric is involved in many areas including the following

Energy and Electric Systems
A wide range of power and electrical products from generators to large-scale displays.

Electronic Devices
A wide portfolio of cutting-edge semiconductor devices for systems and products.

Home Appliance
Dependable consumer products like air conditioners and home entertainment systems.

Information and Communication Systems
Commercial and consumer-centric equipment, products and systems.

Industrial Automation Systems
Maximizing productivity and efficiency with cutting-edge automation technology.

OVERVIEW

Create new value with MELSERVO-J5. Unlock performance with a total drive solution.

- Interchangeability with previous generation models

Create a cutting-edge servo system together with MELSERVO-J5

Maximize the performance of your system and equipment with MELSERVO-J5 total drive solutions

Progressiveness

For evolution of machines

The dramatically improved basic performance of MELSERVO-J5 and CC-Link IE TSN enable total drive solutions that help to increase production efficiency and keep your equipment on the cutting edge.

Performance improvement	Program standardization
● High-speed/high-accuracy/multi-axis	● Conforms to IEC 61131-3
● Vibration suppression	● Function blocks for motion control
● Compact and energy efficient	● Synchronous control /cam control

Connectivity

For flexible system configurations

CC-Link IE TSN enables a high degree of compatibility with AI systems and IoT technology. Our servo system provides new opportunities for value creation with highly integrated connectible devices and a dramatically expanded range of compatible devices.

Integration with connectible devices
- ● CC-Link IE TSN
- ● Vision system integration

Usability

For quick operation start

Our intuitive and user-friendly products are designed to make program development as simple as possible. From system design to maintenance, efficiency is improved at each step of the development process through software and sizing tool enhancement.

Tool enhancement	Improved drive system usability
● Simple programming	● Single connector/one-touch lock
● Motor sizing/model selection software	● Single/dual cable types
● Collaboration with partners	● Servo adjustment

Maintainability

Usability

Maintainability

For prompt detection and diagnosis of failures

Thanks to years of technical know-how and experience designing state of the art drive technology, we have created predicative and planned maintenance functions that allow you to quickly discover, diagnose, and resolve errors when they occur.

Predictive/preventive maintenance

● Machine diagnosis

Corrective maintenance

● Drive recorder

Zero-maintenance

● Batteryless absolute position encoder

Heritage

For utilization of existing devices

Incorporate existing manufacturing devices into your new system and benefit from reduced costs and faster construction speed.

Interchangeability with previous generation models

● Interchangeable mounting method

Created using a brand new approach, this reducing the TCO through improved

Focused on improving total performance.
The MELSERVO-J5 series servo system boasts industry-leading level basic performance.
The high-speed, high-precision capabilities of MELSERVO-J5 help to increase the productivity of your machines.

Minimum operation cycle *2	Max. number of control axes
250 μs	**256** axes

*2. The number of controllable axes varies by the operation cycle.

CC-Link IE TSN

CC-Link IE TSN supports TCP/IP communications and applies it to industrial architectures through its support of TSN enabling real-time communications. With its flexible system architecture and extensive setup and troubleshooting features make CC-Link IE TSN ideal for building an IIoT infrastructure across the manufacturing enterprise.
The communications speed is 1Gbps.

* TSN: Time Sensitive Networking
* IIoT: Industrial Internet of Things

CC-Link **IE TSN**

Servo System Controllers

The servo system controller is a controller which performs various types of motion control, including positioning, synchronous, cam, speed, and torque control. We offer two new types of servo system controllers: RD78GH/RD78G Motion modules and SWM78 Motion Control Software.

Motion Modules   RD78GH RD78G

RD78GH/RD78G Motion modules utilize a multi-core processor to achieve enhanced basic performance.

Motion Control Software   SWM78

SWM78 Motion Control Software performs motion control by being installed on an industrial personal computer with a real-time operating system.

Servo Amplifiers

The MELSERVO- J5 series are high-performance, industry-leading servo amplifiers featuring a unique engine that is more powerful than ever before.
These servo amplifiers can connect to CC-Link IE TSN to perform high-speed, high-precision control.
Each multi-axis servo amplifier drives a maximum of either two or three servo motors (depending on the model of servo amplifier chosen), simplifying wiring and enabling a compact machine at a lower cost.

MITSUBISHI ELECTRIC SERVO SYSTEM
MELSERVO-J5

Rotary Servo Motors

The HK series rotary servo motors are equipped with a 26-bit resolution batteryless absolute position encoder.

Batteryless Absolute Position Encoders

Mitsubishi Electric's unique multi-revolution detection method allows the saving of absolute position data without a battery.

Single Connector/One-Touch Lock/Single Cable Type

The servo motor power supply, encoder, and electromagnetic brake can be connected using only a single cable.
The one-touch lock lever allows for simple wiring.

* "Industry-leading level" refers to results from a Mitsubishi Electric June 2019 research study.

Notes: 1. Connectors and the gap along the rotor (output shaft) are excluded.

Construct a high-performance servo system using our extensive product line

We understand that each system is different and has unique drive control requirements.

To meet these demands, we have expanded the product line for our next-generation servo system to offer simple converters, engineering software, servo system controllers, servo amplifiers, servo motors, and a variety of other components.

Mitsubishi Electric is dedicated to satisfying all of our customers' needs.

Collaboration with partners

Collaborating with our extensive group of partners allows us to flexibly support your system needs

Servo systems are constructed using iQ Platform devices such as controllers, servo drivers, actuators, and sensors, and collaboration with our partner companies allows us to expand the number of possibilities available to customers. For example, partner products such as stepping motors, direct drive motors, vision systems, and various types of software are available to keep your equipment on the cutting edge. We will be continuously expanding collaborations with partner companies to support customers' systems.

Single network

Open integrated networking across the manufacturing enterprise
CC-LinkIE TSN

CC-Link IE TSN supports TCP/IP communications and applies it to industrial architectures through its support of TSN enabling real-time communications. With its flexible system architecture and extensive setup and troubleshooting features make CC-Link IE TSN ideal for building an IIoT infrastructure across the manufacturing enterprise.

* TSN: Time Sensitive Networking
* IIoT: Industrial Internet of Things
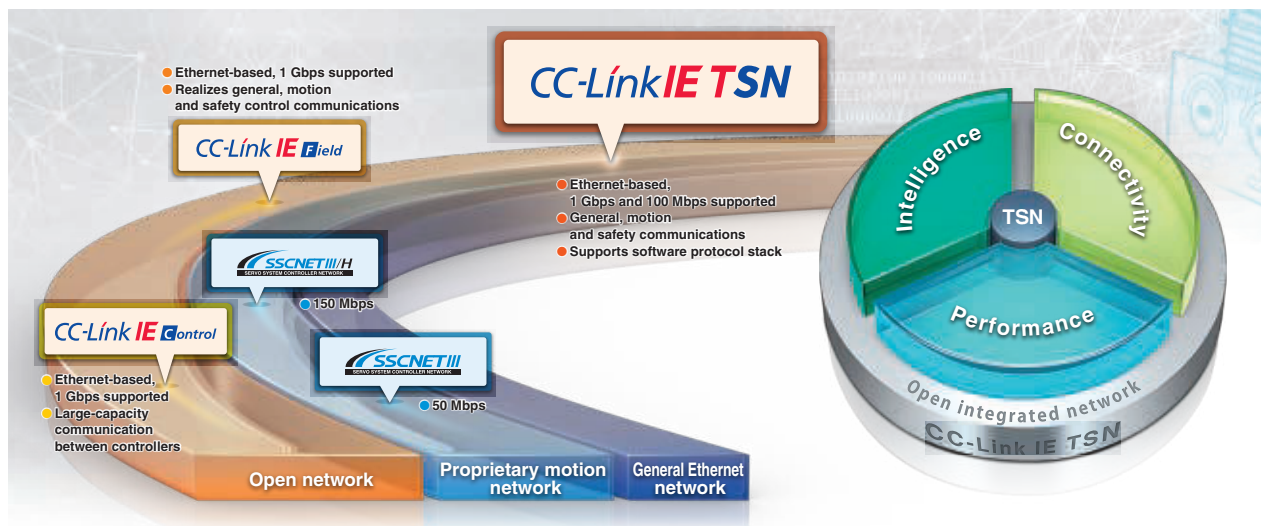

Real-Time Network Performance Even When Integrated with Information Data

TSN technology enables mixing of deterministic communications with IT system information data on the same network. Giving higher priority to CC-Link IE TSN cyclic communications and TCP/IP communications by allocating increased network bandwidth, devices using general Ethernet communications can be connected on the same network while maintaining real-time control communication performance.
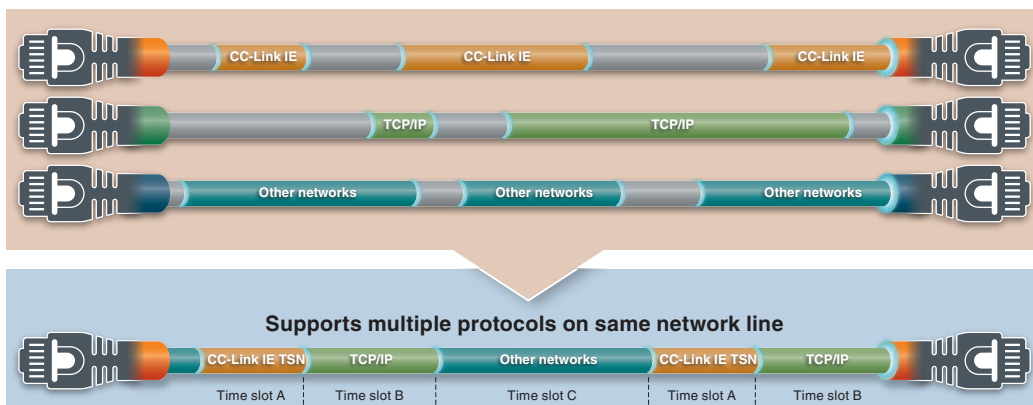

Deterministic Control Even When Mixed with TCP/IP Communication

Deterministic performance of cyclic communication is maintained even when mixed with information data (non real-time). This enables TCP/IP communication devices to be used without affecting overall control.

Servo System

High-Speed, High-Accuracy Motion Control

CC-Link IE TSN controls I/O modules while also maintaining high-speed motion control. The single network boosts machine performance.

● Motion control (high-speed processing)
● I/O control (low-speed processing)
*1. The connection of general stations are planned for a future support.

Time Synchronization

Set time is completely synchronized among servo amplifiers, Motion modules, and PLC CPUs. This time synchronization enables accurate recording of the event history in chronological order, making it simple to identify the cause of errors.
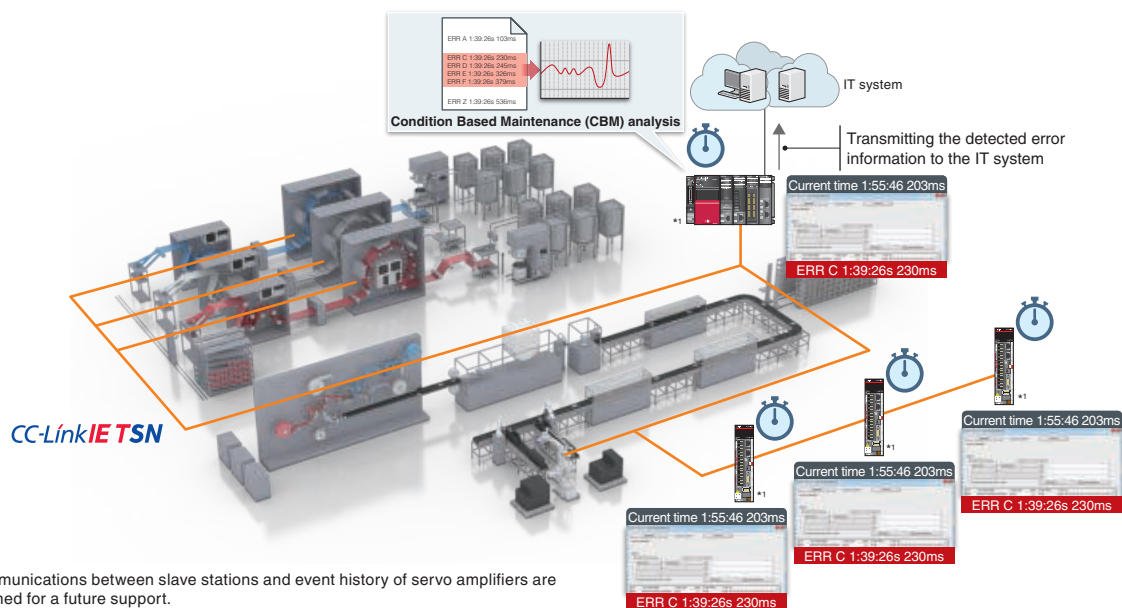

*1. Communications between slave stations and event history of servo amplifiers are planned for a future support.

Seamless Connectivity Between IP Communications Devices and the Servo System   Future support planned

Various types of modules and devices, such as servo amplifiers, I/O modules, and IP communication devices, can all be connected to the CC-Link IE TSN. The connection order of these modules is highly flexible; for example, I/O modules can connect between servo amplifiers with high-speed communications.
Large-Capacity Data Communications

CC-Link IE TSN is a high-speed, large-capacity 1 Gbps communications network that is capable of sending and receiving large amounts of data, such as manufacturing, quality, and control data from the production process. The network can transmit large recipe data or traceability data at high speeds without degrading the performance of servo system communications. In addition, Ethernet supported devices can directly and seamlessly connect to controllers on the same network line.
Network configuration example (includes functions and products planned for future support/release.)

Simple maintenance

Comprehensive diagnostic functions contribute to improved maintenance

Increasing the capacity of your production line is an important factor in this fiercely cost-competitive market. The MELSERVO-J5 series servo system provides various kinds of maintenance functions that predict and prevent unforeseen problems and enable quick recovery when trouble arises.
These functions contribute to reduced downtime and increased productivity while protecting the quality of your products.

MELSERVO-J5 series servo amplifiers and servo motors are equipped with various predictive and preventative maintenance functions.

Predictive Maintenance (CBM)

Predictive maintenance, also known as Condition Based Maintenance (CBM), is the practice of detecting changes in machine vibration and friction so that parts can be replaced accordingly before they fail.
Performing predictive maintenance leads to increased machine capacity and helps to avoid downtime, reduce maintenance time, and improve both productivity and product quality.

Detects Changes in Vibration and Friction to Predict the Life of Mechanical Drive Components

[Machine diagnosis function]
The machine diagnosis function detects age-related deterioration based on the frictions and vibrations of mechanical drive components such as ball screws, belts, and gears. This function automatically generates a failure warning limit, detects errors, and outputs a warning upon signs of failure. Results of the failure are transmitted via CC-Link IE TSN to the motion module and IT system and can be used for maintenance and overall machine diagnostics.

Ball screw

To detect the life of the ball screw:
● Friction failure prediction with the friction estimation function
● Vibration failure prediction with the vibration estimation function
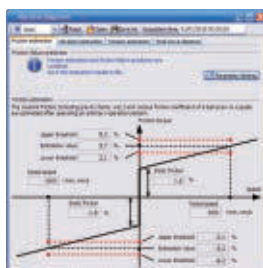

Estimated friction value is displayed.

Belt NEW

To detect the life of the belt:
● Static friction failure prediction
● Belt tension deterioration prediction
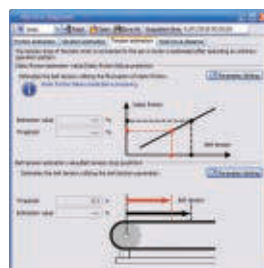

Estimated static friction and belt tension are displayed.

Gear NEW

To detect the wear level of the gear:

● Backlash estimation function
● Gear failure prediction

Estimated backlash value is displayed.

Preventative Maintenance (TBM) *[1]

*1. TBM stands for Time Based Maintenance.

Machine Diagnosis (Mechanical Drive Components)

This function estimates when a machine failure will occur based on the total travel distance of the servo motor, and notifies when it is time for replacement if the rated life of the mechanical drive components is set.

● Machine total travel distance failure prediction

Total travel distance of the machine is displayed.

Total travel distance / Maintenance notification / Machine failure / Signs of failure / Time
Servo Amplifier Life Diagnosis

This function displays the cumulative energization time and the number of inrush relay on/off times. The data can be used to check life of the parts as a rough guide.

● Cumulative energization time (Smoothing condenser/ cooling fan life span)
● The number of inrush relay on/off times (Inrush relay life)
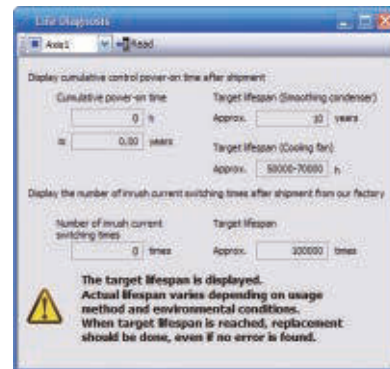

Corrective Maintenance

Servo Amplifier Drive Recorder

Enhanced functions

This function continuously monitors the servo status and records the status transition such as a trigger condition before and after an alarm for a fixed period of time. Reading the servo data on MR Configurator2 helps you analyze the cause of the alarm. In addition to the monitor values and the waveform of the past 16-time alarms in the alarm history, the system configuration and the servo parameters are displayed. Alarm occurrence time is also displayed when the servo amplifier and the controller are normally in communication on CC-Link IE TSN.

Stores data in non-volatile memory at an alarm occurrence.

Displays an occurrence time for MR-J5-G.

Records past 16-time alarms

Displays a system configuration

Stores data in the memory continuously over certain period of time

Displays waveforms

Displays monitor values

Displays parameters
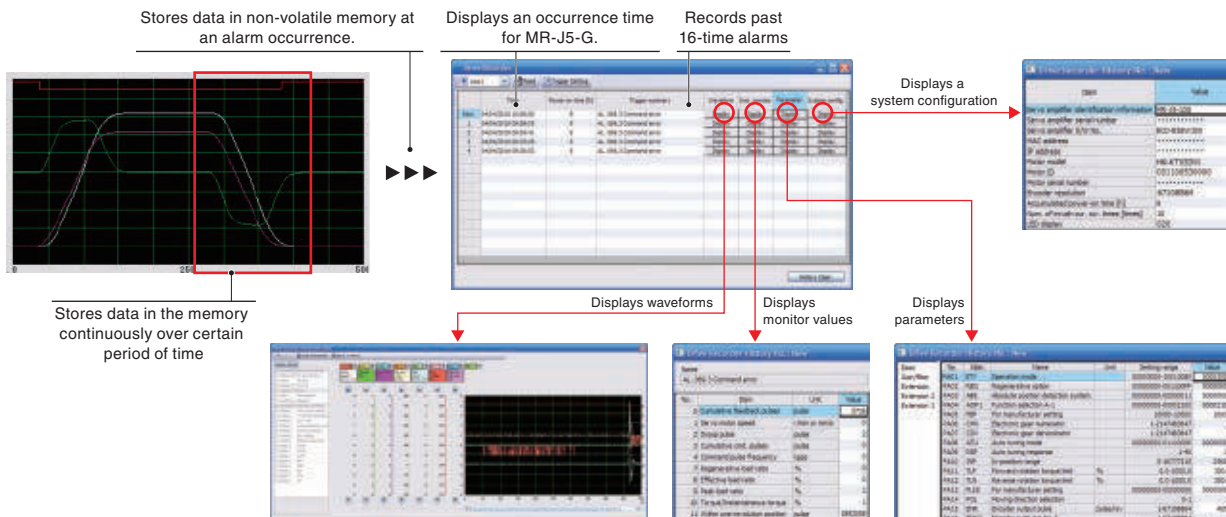

An engineering environment that provides common, consistent usability throughout all product development phases

Programmable Controller Engineering Software

MELSOFT GX Works3

Program creation is largely dependent on the ability of the programmer; therefore, an enormous amount of time is often spent on creating a servo program where a high level of programming expertise is required.

"MELSOFT GX Works3" introduces a more intuitive, efficient, and user-friendly programming environment that revolutionizes the programming process and minimizes hassles.

Engineering Environment for Maximizing Your Machine Performance

● Mitsubishi Electric offers a complete, consistent engineering environment which covers all aspects of the product development cycle - from sizing motors all the way to programming with function blocks, startup, and maintenance.

Globalization

[PLCopen® Motion Control FB]
PLCopen® Motion Control FB is a standardized interface, and therefore people other than the program designer can understand the programming, leading to reduced design and maintenance time.

PLCopen® motion control

[Conforms to IEC 61131-3]
MELSOFT GX Works3 realizes structured programming such as ladder and ST, making project standardization across multiple users even easier.

[Multi-language support for global operations]
To adhere to today's global production needs, MELSOFT GX Works3 supports multi-language features at various levels, from the multiple language software menu system to device comment language switching features.
Supported languages: English, Japanese, and Chinese.
Easy programming

Faster, Simpler, Intuitive Programming with MELSOFT GX Works3

The software supports the internationally standardized PLCopen® Motion Control Function Blocks for motion control programming, and provides three selectable programming languages: ladder diagram (Ladder), function block diagram/ladder diagram (FBD/LD), and structured text language (ST). Select the programming method that suits your system scale, the application, and the required functions.

Programming

MELSOFT GX Works3 includes various user-friendly features - including intuitive operation with graphical setting screens, labels, and function blocks.
These features greatly help users create a program faster and simpler.

PLC CPU
Ladder, FBD/LD, ST language

Motion module
ST language
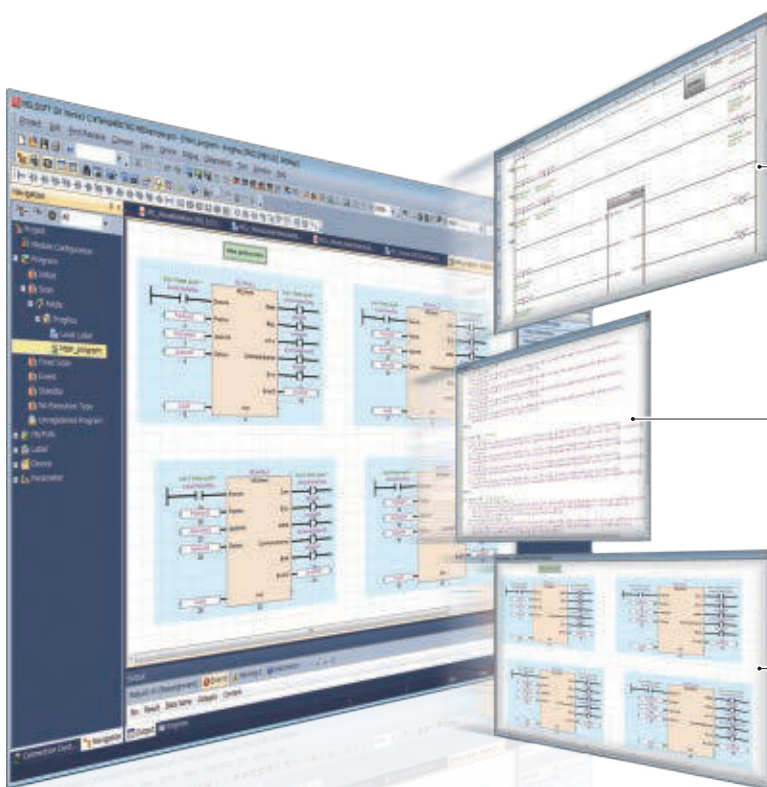

● **Ladder diagram**
Ladder diagram is a programming language used to describe sequence control. Each ladder consists of contacts and coils and represents logical operations consisting of AND/OR in combinations of series and parallel.

● **Structured text language**
ST language is defined by International Standard IEC61131-3 that defines the logic description system.

● **FBD/LD**
In FBD/LD programs, data flows from the output point of a function block, function, variable (label or device), or constant to the input point of another function block or variable.

Programming Using Function Blocks

The software offers a wide selection of function blocks - PLCopen® Motion Control Function Blocks and Mitsubishi Electric's original function blocks. You can easily create a program just by choosing the function blocks that your system requires.

Drag & drop

Just select to create a program
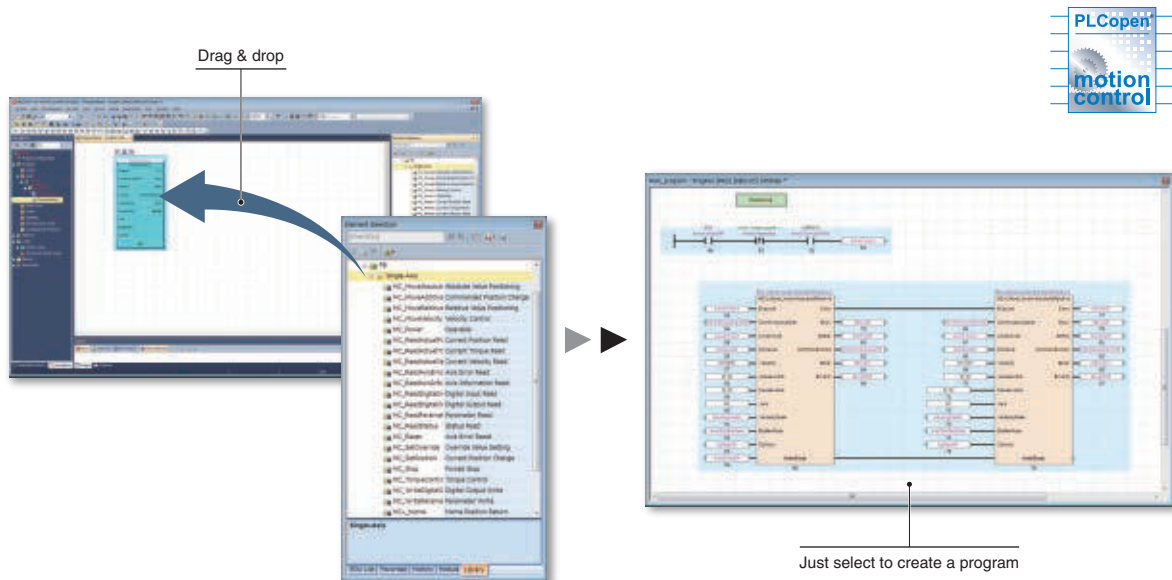

Easy Programming Through Structured Text Language

Create a structured text program just by dragging and dropping function blocks.

● Easy programming through drag & drop of programming elements
● Consistent usability for more intuitive operation
● A wide selection of programming elements in the library, helping to reduce programming time
● MELSOFT GX Works3 conforms to IEC 61131-3 and realizes structured programming such as ladder and ST, making project standardization across multiple users even easier.

MELSERVO-J5 Series

Solution
Every industry and application requires different characteristics from a servo system. These systems must be flexible enough to meet more common requirements, like high speed and accuracy, while also fulfilling the specific operation requirements.
Our extensive servo product line is able to meet a wide range of automation needs by combining with a variety of FA (Factory Automation) products.

High-Speed, High-Accuracy Trajectory Control

Enabled by our high-resolution servo motor encoder, a smooth profile can be easily drawn on a workpiece by using a combination of linear interpolation, 2-axis circular interpolation, and trajectory control.
Servo adjustment time is also reduced through multi-axis adjustment, quick tuning, and one-touch tuning.

Reduction in adjustment time

Multi-axis adjustment
Simultaneously adjusts the two axes for tandem configuration.

Increased accuracy during trajectory control
Precise trajectory control
●High-resolution encoder

Servo Adjustment

At machine startup, noise sometimes occurs due to resonance. With the quick tuning function, tuning is performed at servo ON and such noise is minimized.

In addition, MELSERVO-J5 series servo amplifiers offer various other types of servo adjustment functions that allow you to select the function that best suits your equipment.

● Quick machine startup
● Suppression of vibrations in the arm portion
● Shortening the cycle time (Gain optimization)

● Gain optimization
● Suppression of machine resonance

Utilization of IoT Technology

Vast amounts of servo data collected on the shop floor are transmitted to the IT system through the CC-Link IE TSN. The IT system centrally manages the collected data, which enables users to understand the status of the entire line. Use of the CC-Link IE TSN compatible servo system helps to implement IoT technology in your factory.

Motion Module

RD78GH   Available soon
RD78G

These Motion modules with multiple-core processors enable to configure a high-speed, large system by supporting the CC-Link IE TSN real-time open network.

● Performs positioning control such as linear interpolation using function blocks. The programming is easy: users just need to set positioning data to the function blocks.
● Connects to various modules such as servo amplifiers and I/O modules via CC-Link IE TSN. This connectivity allows you to configure a servo system more flexibly.
● Supports a consistent engineering environment that is capable of handling tasks ranging from system design to debugging and maintenance.

Product Lines

CC-Link**IE TSN**
MELSEC iQ-R series

RD78GHV   Available soon
RD78GHW   Available soon

● Maximum number of control axes:
   128 axes/module (RD78GHV)
   256 axes/module (RD78GHW)
● Minimum operation cycle [1]: 31.25 μs
● ST language program capacity:
   Built-in ROM max. 64 MB
   + SD memory card

RD78GHV/RD78GHW are designed with a quad-core processor that enables higher-speed control. These Motion modules can be directly programmed to distribute load control with PLC CPUs.
This ensures that performance will not be degraded even when the number of axes is increased.

Control Load Distribution Realized by Flexible Programming　RD78GH　RD78G

Programming using the internationally standardized PLCopen®
Motion Control FBs is possible.
Selectable programming languages vary depending on the
controllers:
● Motion module: structured text language (ST)
● PLC CPU: ladder diagram (Ladder), function block diagram/
　ladder diagram (FBD/LD), and structured text language (ST).
Select the controller and programming language according to
the necessity of high-speed operation and the complexity of
the operation.

PLC CPU
Ladder, FBD/LD,
ST language

Motion module
ST language
Programming by PLC CPU and Motion Modules

This programming method is perfect for demanding
applications which require high-speed, complicated motion
operation.

[Processing details]
● The PLC CPU starts Motion module programs.
● The Motion module performs operation of double precision
　floating-point numbers and polynomials.
● The Motion module performs motion control.
Motion modules can execute complex operations in place of
the PLC CPUs. This reduces the operation burden on PLC
CPUs and results in a shorter cycle time.

Positioning control

Synchronous control
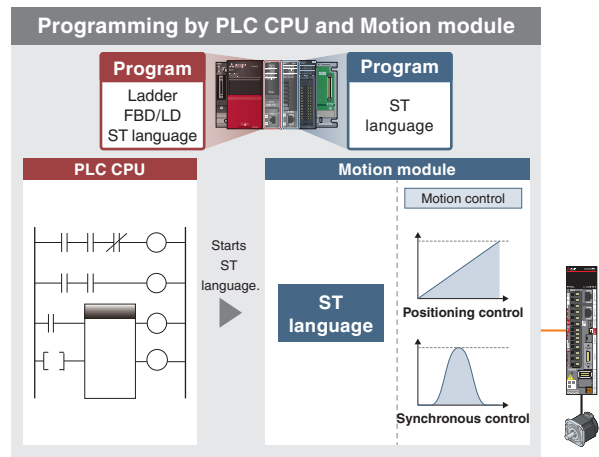

● Control load distribution
● Reduced cycle time

Programming by PLC CPU only

This programming method is perfect for users who prefer to
use only PLC CPU programs.
A PLC CPU program starts operation of the Motion module,
eliminating the need for users to create another program for
the Motion module, reducing programming burden.
The PLC CPU program supports the internationally
standardized PLCopen® Motion Control Function Blocks,
and therefore people other than the program designer can
understand the programming, leading to reduced design and
maintenance time.

Circular interpolation
Helical interpolation [1]
Multi-axis path control [1]
*1. Future support is planned for these control types.

Acceleration/Deceleration Methods

RD78GH | RD78G | SWM78

Three types of acceleration/deceleration methods are available: trapezoidal acceleration/deceleration, jerk acceleration/deceleration, and acceleration/deceleration time fixed.

Trapezoidal acceleration/deceleration

After starting, maximum acceleration is maintained until the target speed is reached.
For example, when a vehicle loaded with a workpiece accelerates suddenly, the workpiece will swing back and forth due to the impact of the sudden acceleration.
To reduce impacts and vibrations in a case such as this, the vehicle must accelerate at a slower rate.
The speed creates a trapezoidal shape.
Jerk acceleration/deceleration

The acceleration changes gradually.
For example, when a vehicle loaded with a workpiece accelerates gradually, the load will not swing back and forth after acceleration. The jerk is maintained during acceleration. When the vehicle has almost reached the target speed, the jerk is decelerated. Adjusting jerk in this way achieves smooth acceleration/deceleration while also shortening the time it takes to reach the target speed.
The speed creates a S-curve shape.
Acceleration/deceleration time fixed method

This method executes acceleration/deceleration based on the time specified, regardless of the commanded speed.
*1. Input acceleration.
*2. Specify acceleration time.

High Flexibility in Synchronous Control   `RD78GH` `RD78G` `SWM78`

Synchronous control is performed using function blocks that operate as software-based mechanical modules such as gear, shaft, clutch, speed change gear, and cam.

● The number and the combination of the synchronous modules are flexibly selected, achieving optimized operation.
● The following two types of cam data are available: cam data and cam data for a rotary knife
● Complex cam control is possible by flexibly switching cams.
● Positioning and synchronous control can be performed together in the same program.
● Cam for a rotary knife can be easily created in MELSOFT GX Works3 or by using function blocks.

Cam Data

RD78GH   RD78G   SWM78

Create operation profile data[1] (cam data) according to your application. The created cam data is used to control output axis.
The following three cam operations are available: linear operation, two-way operation, and feed operation. Choose one according to your application.

[1]. "Operation profile data" is a general name for waveform data, which is used for various applications.

▌ Operation Profile Data (Cam Data)

Linear operation

The cam pattern is a linear line.
This pattern is used for a ball screw and a rotary table.
Ball screw [Unit: mm]

Rotary table [Unit: degree]

Two-way operation

The beginning and the end of the cam pattern are the same.
Mechanical cams fall into this category.
Crankshaft

Feed operation

The beginning and the end of the cam pattern differ.
This pattern is used for fixed-amount feed operations and intermittent operations.
Set the end point for the feed operation to a position of your choice.
Belt conveyor

Rotary table [Unit: degree]

Application examples

[Machine with all axes synchronized]
All the axes of the machine are in synchronization.

[Machine with only certain of the axes synchronized]

Only two axes synchronized

Two arms synchronized
Only two axes are synchronized.
The other axes perform positioning operation while the two axes execute synchronous control.
The two arms can avoid interference by synchronizing with each other, shortening the cycle time.

A Variety of Options to Create Operation Profile Data   RD78GH   RD78G   SWM78

The operation profile data is divided into the following two types of cam data.

```
                    Operation profile data
          ┌──────────────────┴──────────────────┐
      Cam data                         Cam data for a rotary knife
```

Cam data
- Create on GX Works3.
- Create on a personal computer (the data is in CSV format).

Cam data for a rotary knife
- Create on GX Works3.
- Create using function blocks.
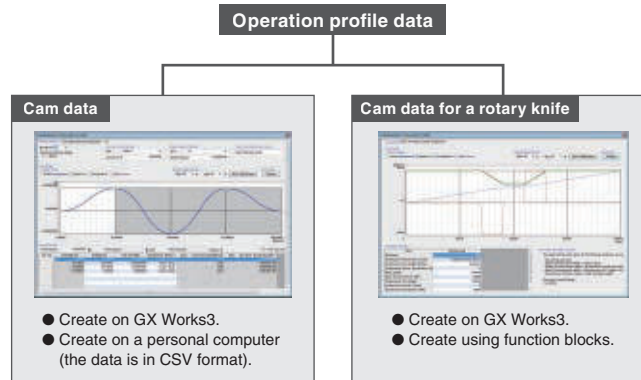

Importing Operation Profile Data in CSV Format

The operation profile data in a CSV format on a personal computer can be imported directly to a Motion module.

Create operation profile data

Easy Cam Creation for a Rotary Knife

Cam data for a rotary knife is automatically generated with MELSOFT GX Works3 or by using a function block.

- (Using function block) The operation profile data (cam data) is created just by setting the sheet length and sheet synchronization width, etc., to the function block and starting it.
- (Using MELSOFT GX Works3) Set the sheet length and sheet synchronization width, etc., which automatically generates cam data for a rotary knife.

Sheet synchronization width
Stroke ratio
Cam reference position
Cam axis length per cycle

Rotary knife
Servo Amplifier Control Mode   `RD78GH` `RD78G`

The servo amplifier has three control modes: position, speed, and torque control modes.

[Control mode]

Position control mode: Accurately move to the target position
(Speed control that includes position loop)

Speed control mode: Drive at the specified speed
(Speed control that does not include position loop)

Torque control mode: Drive at the specified torque
Note 1: Transits at stop completion or error occurrence.
Note 2: Transits when Aborting or Buffered is executed to an instruction other than MC_MoveVelocity/MC_TorqueControl.

Selectable Speed Control to Best Fit Your System Needs   `RD78GH` `RD78G`

Two types of speed control are available: speed control that includes position loop and speed control that does not include position loop.

Speed Control That Does Not Include Position Loop

● Control mode setting: Speed control mode
● Minimizes speed deviation by flexibly responding to speed changes, such as those that occur when the load changes.
● Suitable for machines which keep driving the motors at constant speed, such as a wind/unwind machine.
● Uses the function block "MC_MoveVelocity".

Wind

Unwind

Speed control

Speed control

Speed control

Torque control

Converting machine
Speed Control That Includes Position Loop

● Control mode setting: position control mode
● Suitable for operations that repeatedly switch between speed and position control.
● Uses the function block "MCv_SpeedControl".
Belt conveyor

Torque Control

Torque Control Mode

The motor drives following the commanded torque and keeps the torque constant and stable.
When the load is light and the speed increases to the set limit, the torque control switches to speed control.

Constant torque

Speed control

Torque control

Application example

[Unwinding axis of converting machines]
Torque control unwinds film at constant tension to prevent wrinkling in the film.
The tension can be kept constant by sequentially controlling the torque commands.
This type of control is perfect for unwinding machines that need to keep the tension of unwound materials constant.

Torque control

Speed control

Unwinding axis

Roll axis
Tightening and Press-Fit Control Mode

Future support planned

When using this mode, you can switch from positioning control to torque control smoothly without stopping the servo motor.

● The absolute position is always kept, and therefore positioning after torque control is smoothly executed.
● Positioning control is smoothly switched to torque control without stopping the servo motor.

Position control   Torque control   Position control

GX Logviewer Enhances Waveform Display   `RD78GH` `RD78G` `SWM78`

The graph data of both PLC CPUs and servo system controllers can be viewed on a single tool, GX Logviewer. This tool helps you efficiently analyze and display data from two different controllers. The state of the Motion modules can be sampled offline.

Data Logging Function (Offline)

The function performs data logging by a specified time interval based on the logging data (trigger condition, data collection) written to the Motion system from the engineering tool. The results are saved as a data logging file.

Up to 10 data settings can be simultaneously logged for the Motion system.

One software, many possibilities

Programmable Controller Engineering Software

GX Works3
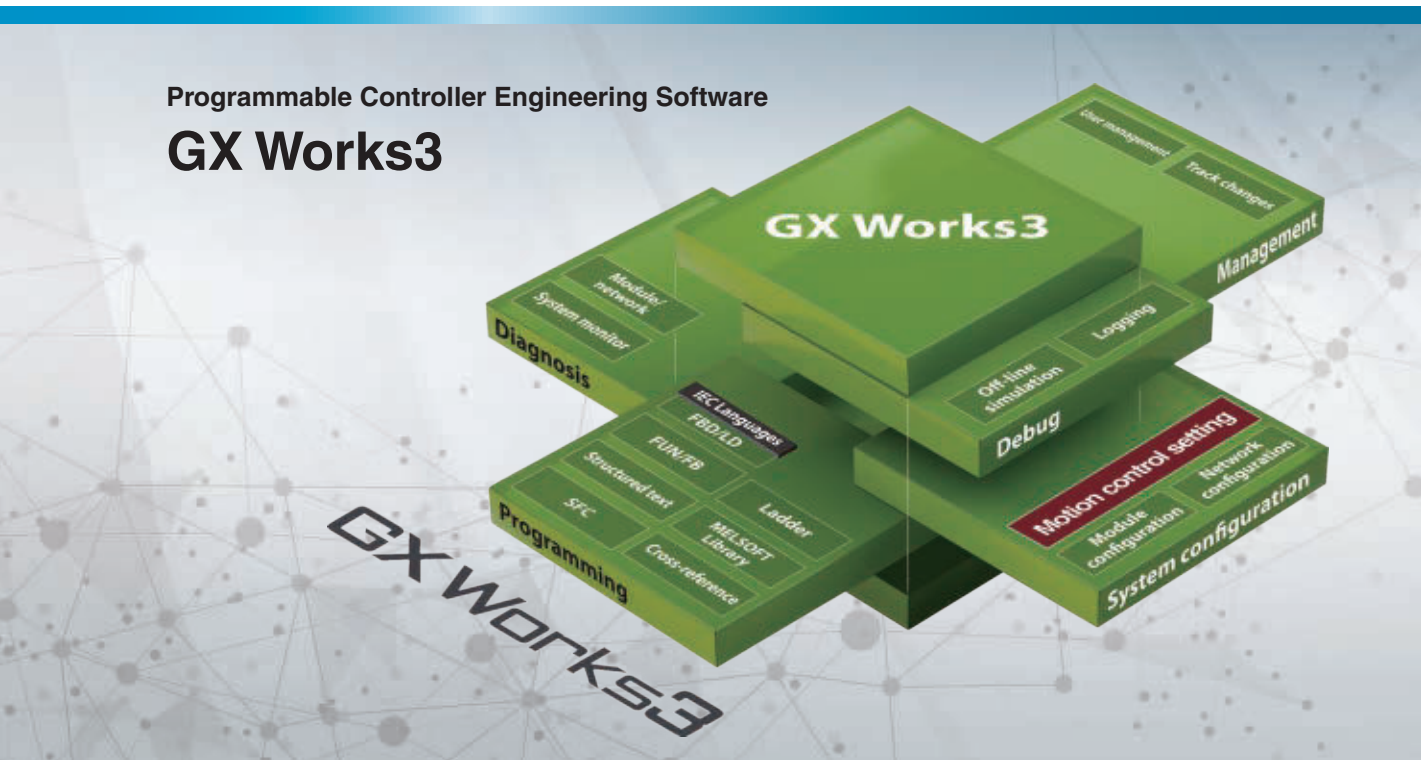

MELSOFT GX Works3 has a variety of features which help users create programs and conduct maintenance more flexibly and easily. This software includes motion control setting to support all Motion module development stages - from setting parameters to programming, debugging, and maintenance.

Development Environment Designed for Ease of Use

This all-in-one software covers all aspects of the product development cycle, resulting in boosted efficiency in programming while also improving user-operability by providing a common interface across all the phases.

System Design > Programming > Debug > Maintenance

System Design

- Network configuration settings
- Automatic detection of network configuration

Programming

- Easy programming in ST language
- More intuitive programming, which eliminates the need to remember devices or buffer memory addresses
- Easy access to axis information
- Operation profile data

Debug

- Various monitor functions, such as axis monitor, ST language program monitor, and event history.

Maintenance

- Various monitor functions, such as axis monitor, ST language program monitor, and event history

Network Configuration Settings

[Network configuration settings]
● Intuitive network settings with drag-and-drop operations and a graphical screen view

[Automatic detection]
● By clicking the [Connected/Disconnected Module Detection] button, the connection status of slave devices is automatically detected and the CC-Link IE TSN configuration screen is generated.

Master station

MR-J5-G servo amplifier

I/O module
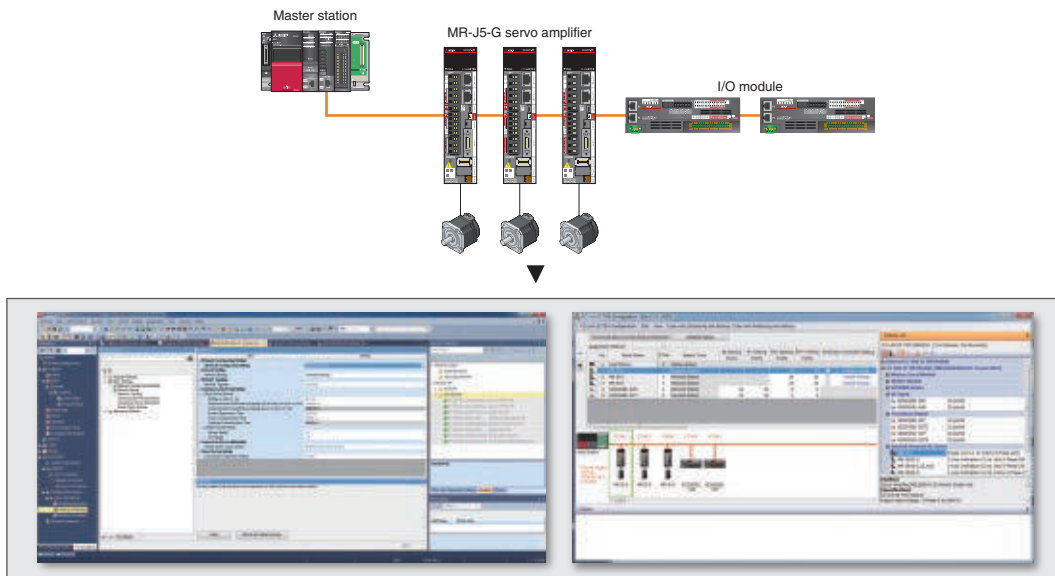

Easy Programming Through Structured Text Language

● Structured text programs are composed of function blocks, increasing program readability.
● Modularization of the programs increases their reusability.
● The consistent, common operability on a single engineering tool improves usability further.
● A wide selection of programming elements in the MELSOFT Library contributes to reducing programming time.
● The program is created through by dragging & dropping programming elements, which simplifies the programming process.

Drag & drop

ST editor

When adding a Motion module on the system configuration screen, function blocks are automatically registered in the library.

Just select to create a program.

MELSOFT Library

A wide selection of libraries and sample programs

Servo System

Servo System Controllers

Servo Amplifiers

Servo Motors
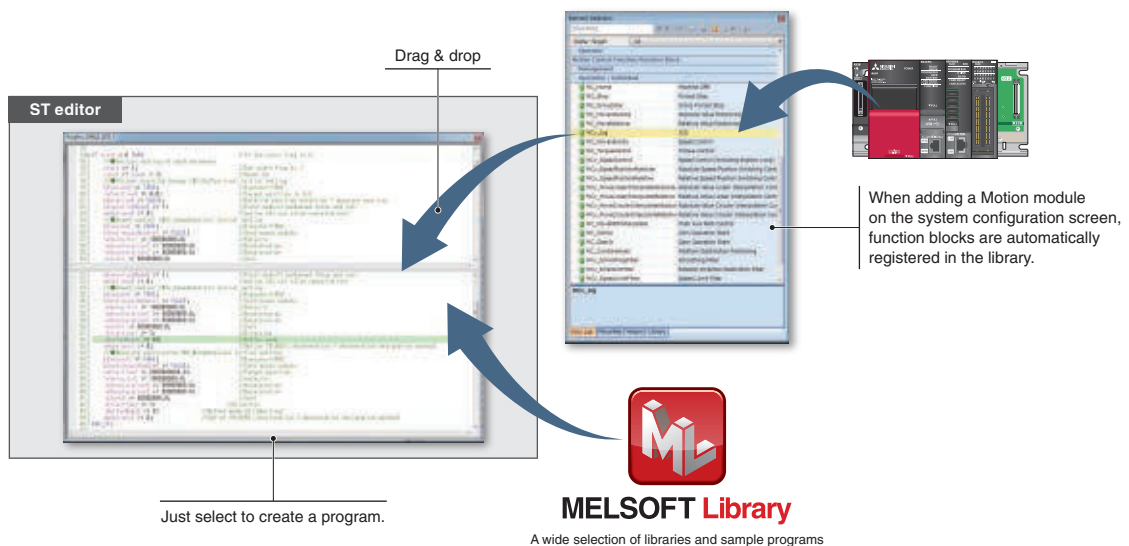

More Intuitive Programming

● The control axes of the Motion modules and I/O signals are managed as label variables.
● Parameters of slave devices can also be accessed.
● The global labels created in the Motion module project can be referred to by PLC CPUs. Future support planned

[PLC CPU programs]

[Global label settings]
Settings to make the global labels become available for PLC CPU
The global labels are registered as a module label in the programming element list window.

● Use of variable names avoids common mistakes such as setting the wrong device No. or using the same device No.
● Labels boost program readability and help you create easy-to-understand programs.
● Easily reuse programs to improve work efficiency.

Axis Information is Easily Accessible

● Axis label variables can be used as an argument to refer axes in positioning function blocks.
● IntelliSence function reduces programming mistakes.
● Access by variable names increases readability.

[Structured text editor]
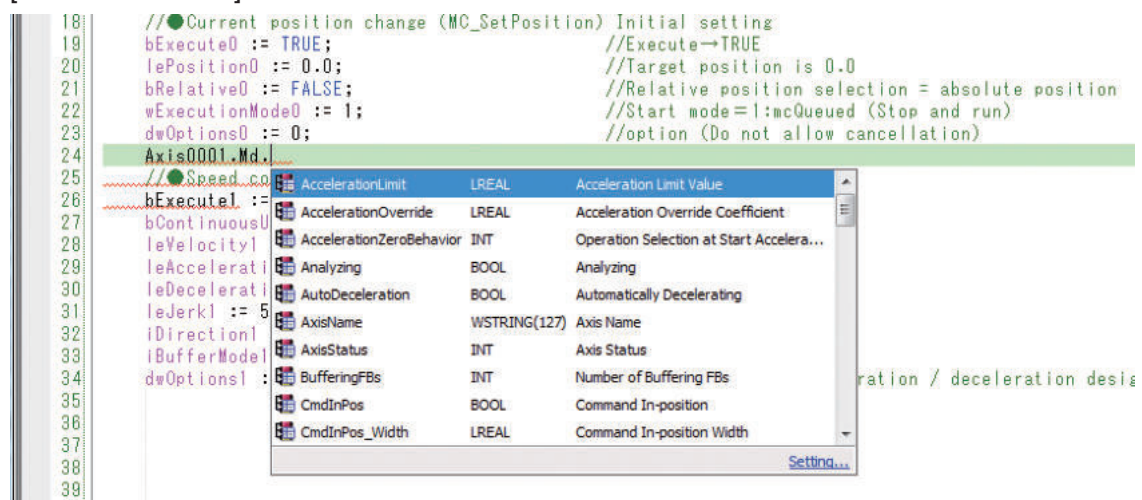

Operation Profile Data with Simple Settings

Operation profile data, such as cam data and cam data for a rotary knife, is easily created.

● The cam graph can be flexibly and easily created through drag & drop. The waveform is changed according to the pointer's movement.
● Stroke, speed, acceleration, and jerk can be set while monitoring the changes on the graph.
● By setting "5th Curve (Adj)" for "Interpolation Method", the speed on a section border becomes smooth.
● Operation profile data for a rotary knife can be automatically generated by settings sheet length, synchronization width, cam resolution, etc.
● The created operation profile data can be checked on the list.

Double-click

Cam data (section interpolation)

Cam data (linear interpolation)

The 5 th curve settings makes the speed between sections (in green) smooth.

5th Curve (Adj)
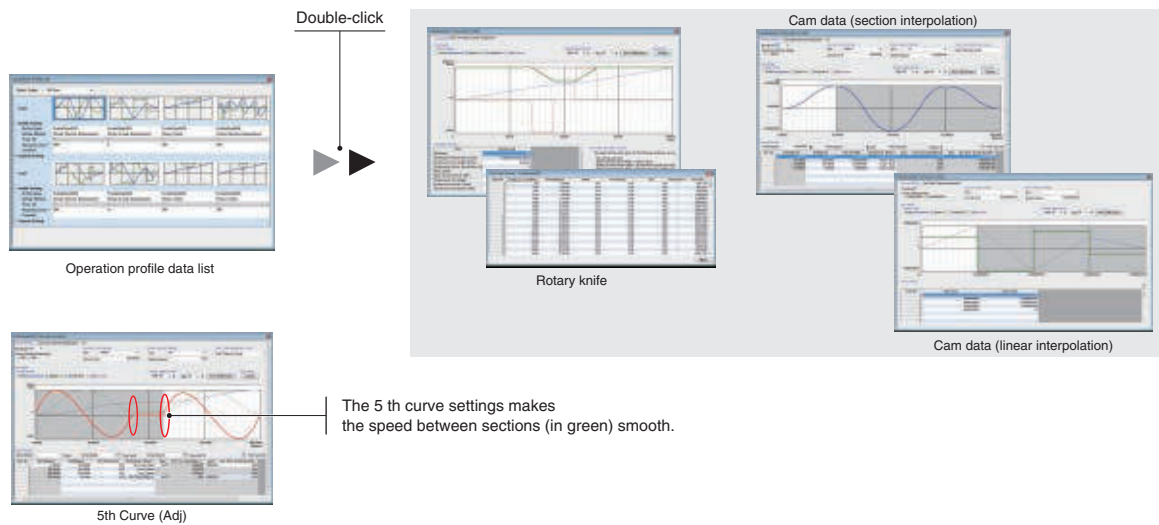

A Variety of Monitor Functions Make Troubleshooting Easy

Improve debug efficiency by customizing monitor items according to your machine.
Axis monitor

Debugging can be executed through both the program monitor and the watch window by using the common interface.

ST language program monitor
Watch window

Event history lists information about executed operations and errors that have occurred on each module in chronological order, which helps to conduct troubleshooting.

Servo System

Servo System Controllers

                          the command.   and vibration is improved.
Advanced Vibration Suppression Control II

This function suppresses two types of low frequency vibrations, owing to vibration suppression algorithm which supports three-inertia system. This function is effective in suppressing residual vibration with relatively low frequency of approximately 100 Hz or less generated at the end of an arm and in a machine, enabling a shorter settling time. Adjustment is easily performed on MR Configurator2.

Three-inertia system

Displays parameters

Connection/Communication Diagnosis

Disconnection Detection

NEW

The servo amplifiers are equipped with both input open-phase detection and output open-phase detection. Input open-phase detection detects an open phase of the main circuit power supply of the servo amplifier, and output open-phase detection detects an open phase of the servo motor power supply. The alarm can be distinguished from other alarms such as the overload alarm, reducing the time required to restore the system.

Open-phase alarm

3-phase 200 V AC Input open phase Output open phase
Servo Motor Incorrect Wiring Detection MR-J5W2   MR-J5W3

NEW

Multi-axis servo amplifiers MR-J5W2-G/ MRJ5W3-G detect servo motors with a different capacity that are incorrectly connected to the A-axis/B-axis/C-axis, contributing to servo motor protection. The servo amplifiers obtain servo motor capacity information of the connected servo motors from the encoders and check whether the servo motors which are connected to the power connectors match the capacity information. If the information is not matched, an alarm occurs. [1]

Notification by an alarm

An incorrect wiring of power cables

A-axis **0.4 kW**

B-axis **1 kW**

MR-J5W2-1010G
*1. The incorrect wiring detection does not work for servo motors with the same capacity.

Encoder Communication Diagnosis

NEW

The encoder communication diagnosis checks the encoder communication circuit in the servo amplifier. This function is useful for classifying the cause of errors (such as disconnected encoder cables) when the encoder communication alarm occurs.

Encoder communication alarm

Causes of errors are classified.

Encoder communication diagnosis
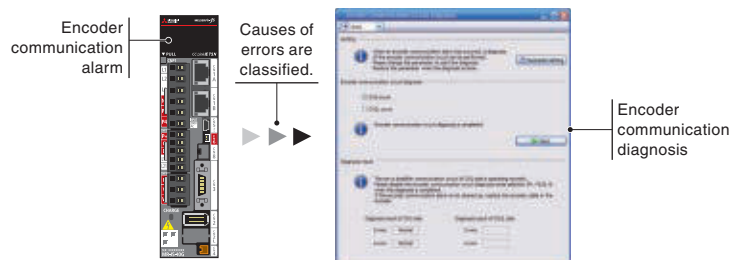

Path Control

Lost Motion Compensation

This function suppresses quadrant protrusion caused by friction and torsion generated when the servo motor rotates in a reverse direction. Therefore, the accuracy of circular path will be improved in path control used in XY table, etc.

Enable the lost motion compensation function.

Before After [X-Y table]

Suppression of quadrant protrusion of circular path
Command Interface

CC-Link IE TSN

The servo amplifiers drive the servo motors by receiving commands (position/speed/torque) at regular intervals in synchronous communication with the CC-Link IE TSN-compatible controller. When combined with a Motion module or Motion Control Software, the servo amplifiers enable exact synchronous operation of axes and machines through high-speed, high-precision time synchronization.

*1. The communication cycle of ≥ 31.25 μs is applicable when combined with RD78GH.

e-Manuals

Instruction manuals for the MELSERVO-J5 series are available in e-Manual format. These manuals are linked with manuals for other products such as servo motors and controllers. e-Manuals let you obtain necessary information quickly and also allow you to keep an enormous number of manuals as one database.
Currently supported languages: English, Japanese, Chinese

Features
● Use all necessary manuals as one database
● Download and use manuals in your local environment
● Use the e-Manual application on tablets
● Download and update manuals quickly and easily
● Search for desired information across multiple manuals

Check manuals across the controllers, the servo amplifiers and the servo motors

A broader selection of capacities to match various applications for smart equipment

Rotary Servo Motors

HK Series

Single connector

Equipped with a 26-bit batteryless absolute position encoder.

Designed for an ambient temperature of up to 60 °C with derating.
Flat type

Small capacity, low inertia

HK-KT Series

Servo motors with a 26-bit batteryless absolute position encoder
Rated speed: 3000 r/min *[1]
Maximum speed: 6700 r/min *[1]
Our product lines includes 400 V and flat type models.
The servo motors have an all-in-one connector, making the connection simple.

*1. The speed varies by the model type.

Medium capacity, medium inertia

HK-ST Series

Servo motors with a 26-bit batteryless absolute position encoder
Rated speed: 2000 r/min *[1]
Maximum speed: 4000 r/min *[1]
The cables for the encoder, the electromagnetic brakes, and the power are equipped with one-touch lock.

*1. The speed varies by the model type.

Product Lines

The HK-KT series boasts a product line that offers 16 models in the 200 V class and 7 models in the 400 V class (total of 23 models, greatly increased from the 5 models in the HG-KR for MR-J4).

Series	Inertia	Motor type	Servo amplifier power supply		: Future release planned
HK-KT	Low inertia	HK-KT_W	200 V AC	50 W to 2.0 kW	
			400 V AC	50 W to 2.0 kW	
		HK-KT_4_W	200 V AC	0.2 kW to 1.0 kW	
			400 V AC	0.4 kW to 2.0 kW	
HK-ST	Medium inertia	HK-ST_W	200 V AC	0.5 kW to 3.5 kW	Up to 11 kW
			400 V AC	0.5 kW to 11 kW	
		HK-ST_4_W	200 V AC	0.3 kW to 3.0 kW	Up to 5.5 kW
			400 V AC	0.5 kW to 11 kW	

0.1 kW   1.0 kW   10 kW

Notes: The motor types are classified by the power class (200 V or 400 V) of the servo motors. The servo motors can be driven regardless of the servo amplifier power supply.

Batteryless Absolute Position Encoder as Standard

NEW

Eliminate the Need for Purchase/Replacement/Stock Control

Servo motors come equipped with a batteryless absolute position encoder as standard, making it possible to configure absolute position systems without the use of batteries or any other options.
Moreover, maintenance costs are reduced as a result of eliminating the battery replacement and stock control.

No need for replacement, purchase, or stock control

Compatible as standard

No batteries required.

The absolute position data remains stored even when the servo motors are removed.
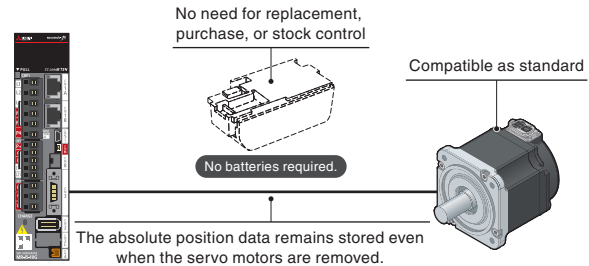

Reduce Wiring for Multi-Axis Systems

In a conventional multi-axis system, battery cables are necessary between the servo amplifiers. Now that the batteries are not required with the use of the batteryless absolute position encoders, wiring battery cables for multi-axis systems is not required.

No batteries required

Wiring for 8 axes is not required.
Save Time in Transporting

Position data remains stored even when the rotary servo motors are disconnected from the servo amplifiers. Thus, control cabinets can be separated from the machines without losing the position data, making it easy to transport machines for use at a new location.
The encoder does not require lithium batteries, allowing machines to be transported by air or sea without special handling.

No displays required

Batteryless design eliminates the danger and hassle of lithium batteries.

Single Connector/One-Touch Lock/Single Cable Type

NEW

HK-KT Series: Single Connector/Single Cable Type/One-Touch Lock

The single connector for the HK-KT series combines the motor power supply, encoder, and electromagnetic brake into a single cable. The one-touch lock eliminates the need for tightening screws, making wiring easy. The servo motors are also compatible with the dual cable type. The cables can be mounted either horizontally or vertically according to your selection. The vertically mounted cables are planned for a future release.
Refer to "Options/Peripheral Equipment" for details of servo motor cables.

Continuous operation

Speed
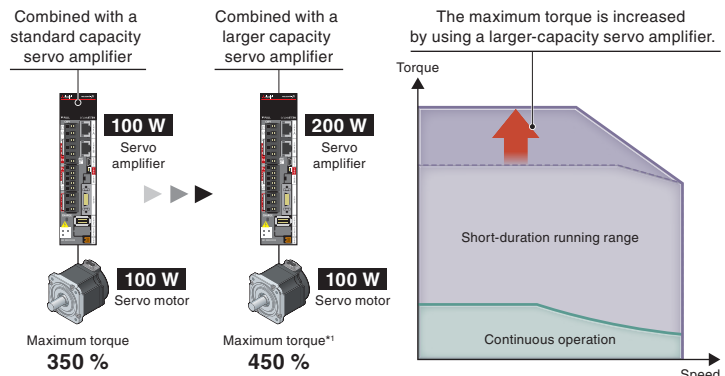

*1. When the maximum torque of HK-KT 13W servo motor is increased with the 200 W servo amplifier.

Drives Smaller Capacity Servo Motors

Servo amplifiers are able to drive servo motors with a smaller capacity than the servo amplifier being used, reducing the kinds of spare parts that are needed.

For example, 400 W servo amplifiers are compatible with the following servo motors: 50 W, 100 W, 150 W, 200 W, and 400 W models. Refer to "Combinations of Rotary Servo Motors and Servo Amplifiers" for details of the combinations.

400 W Servo amplifier

The servo amplifier drives a servo motor with the same capacity

400 W Servo motor

400 W Servo amplifier

A 400 W servo amplifier drives a 400 W or smaller servo motors

400 W Servo motor

50 W Servo motor

100 W Servo motor

150 W Servo motor
200 W Servo motor

Drives 200 V/400 V Class Servo Motors

The 200 V servo amplifiers can drive both 200 V and 400 V servo motors, and the 400 V servo motors may produce torque that is sufficient for operation when combined with smaller-capacity 200 V servo amplifiers. Lowering of the capacity of the servo amplifier contributes to lower costs and reduced installation space.

Compact Servo Motors with a Batteryless Absolute Position Encoder | NEW

HK-KT series servo motors come equipped with a batteryless absolute position encoder and are more compact than the previous generation HG-KR series. Flat types are also available in the HK-KT product line, contributing to a compact machine design.

Motor length: 58.5 mm
Improved Environmental Resistance | Enhanced functions
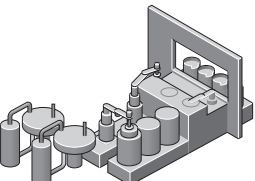

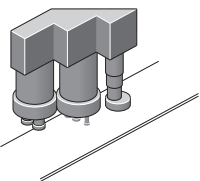

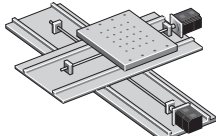

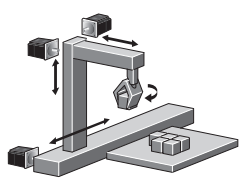

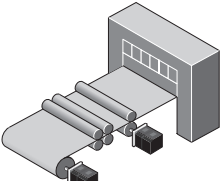

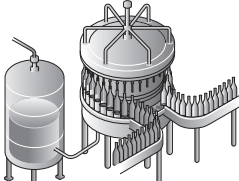

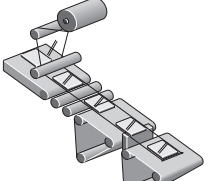

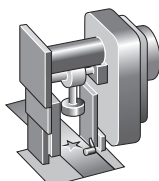

Servo motors feature enhanced environmental resistance.
Ingress protection (IP) rating of the servo motors: IP67 [1]
Designed for an ambient temperature of up to 60 ˚C.[2]

[1]. If the IP rating of the servo motor differs from those of option cables and connectors, overall IP rating depends on the lowest of all.
[2]. Derate the speed/torque when using the servo motors at high ambient temperatures.

IP67 rated motor [1]

Ambient temperature: 60 ˚C [2]

Application Examples

Semiconductor/FPD/photovoltaic manufacturing systems	Mounters/bonders	X-Y tables	Robots
Loaders/unloaders, feeders and sliders	Food processing machines (filling machines, mixers, measuring machines, etc.)	Food packaging machines	Press machines

Drive System Sizing Software "Motorizer"

Select the most suitable servo motors, servo amplifiers, and regenerative options for your machine just by setting machine specifications and operation patterns. You can select a suitable combination from various results.
This software also supports multi-axis systems, enabling you to set operation patterns and select options for multiple axes.

Specification input

Navigation

• 12 common load mechanisms
• Able to add mechanical transmissions

The selection result displays various possible options.

Flexible support for load mechanisms

● Select a load mechanism from 12 common types.
● Add transmission mechanisms such as a coupling.
● Set an inclination angle of the load mechanisms as desired.

Selection of several patterns

● Displays a list of load to motor inertia ratio, peak torque, etc., of each selection.
● Compatible with the expanded combinations of the servo amplifiers and the servo motors.
● Set threshold values for judgement.

Compatible with multi-axis systems

● Supports the multi-axis servo amplifiers and the converters.
● Set operation patterns for multiple axes.
● Select regenerative options for a multi-axis system.

Tutorial video

● Illustrates how to use the software and select drive systems in the video.

Servo motors for high-speed, high-accuracy, linear drive systems

Linear Servo Motors

LM Series

Product Lines

Four series are available depending on applications.

▲
Thrust

Core type (natural/liquid cooling)
LM-F series
Maximum speed: 2 m/s
Rated thrust: 300 N (natural cooling)
600 N (liquid cooling)
Max. thrust: 1800 N (natural/liquid cooling)
Compact core type linear servo motors.
The integrated liquid-cooling system doubles
the continuous thrust.

Press feeders

NC
machine tools

Material
handlings

Coreless type
LM-U2 series
Maximum speed: 2 m/s
Rated thrust: 50 N to 600 N
Max. thrust: 150 N to 2400 N
No cogging, small speed fluctuation.
No magnetic attraction force,
longer life of the linear guides.

FPD assembly
systems

Core type with magnetic attraction
counter-force
LM-K2 series
Maximum speed: 2 m/s
Rated thrust: 120 N to 1440 N
Max. thrust: 300 N to 3600 N
Longer life of the linear guides
due to the magnetic attraction
counter-force structure.
Low audible noise.

Semiconductor
mounting
systems

Screen printing
systems
Scanning exposure
systems

Core type
LM-H3 series
Maximum speed: 3 m/s
Rated thrust: 70 N to 960 N
Max. thrust: 175 N to 2400 N
Core type suitable for space-saving, high
speed and high acceleration/deceleration.

◀ Feed speed-oriented

Positioning-oriented ▶

Linear Servo Motors

Basic Performance

- Maximum speed: 3 m/s (LM-H3 series)
- Maximum thrust range: 150 N to 3600 N. Small size and high thrust are achieved by the increased winding density and the optimized core and magnet geometries as a result of electromagnetic field analysis.
- Four series are available: core, liquid-cooling core, magnetic attraction counter-force core, and coreless types.

- The linear servo motors are compatible with a variety of serial interface linear encoders. The linear encoder resolution ranges from 1 nm and up.
- High-performance systems such as high-accuracy tandem synchronous control are achieved with CC-Link IE TSN.

Higher Machine Performance

For higher machine performance

- Improved productivity due to high-speed driving part.

For easier use

- The linear servo motor enables a simple and compact machine with high rigidity.
- Smooth operation and clean systems are achieved.

For flexible machine configurations

- Multi-head and tandem systems are easily configured.
- The linear servo motor is suitable for long-stroke applications.

[Offers more advantage than conventional ball screw driving systems]
Application Examples

Optimum for a linear drive system which requires a high speed and high accuracy. Easily achieve a tandem configuration or multi-head configuration.
Tandem configuration

The linear servo motors configured in tandem are suitable for large systems that require highly accurate synchronous operation between two axes.
Multi-head configuration

Multi-head systems enable control of two motor coils independently, thereby simplifying machine mechanisms. This system is suitable for machines that require a short cycle time.

Machine tools XYZ stage
Semiconductor/FPD manufacturing systems
Electrical parts assembling/manufacturing systems
Screen printing systems and large FPD coaters
Material handling systems
Multi-head material handling between machines

	ø180 mm	6 N·m to 18 N·m / 18 N·m to 54 N·m			
	ø230 mm	12 N·m to 72 N·m / 36 N·m to 216 N·m			
	ø330 mm		40 N·m to 120 N·m / 120 N·m to 360 N·m		

1 N·m   10 N·m   100 N·m   1000 N·m

Notes: Use the direct drive motors manufactured in June 2019 or later.

Direct Drive Motors

Basic Performance

High performance with the latest technologies

Our latest magnetic design and winding technologies enable high torque density. In addition, extremely smooth rotation is achieved by the minimized torque ripple.

High-resolution absolute position encoder

The direct drive motor is equipped with a high-resolution absolute position encoder (1,000,000 to 4,000,000 pulses/rev) as standard. High-accuracy machines are achieved.

Compact and low-profile design

Due to high level of structural design technology, compact and low-profile design is achieved. This design enables a small mounting space and a low center of gravity.

Hollow shaft diameter range: ø20 mm to 104 mm

The motor is equipped with a large hollow shaft resulting from using bearing and encoder with large diameter. It allows cables and air tubing to pass through.

Higher Machine Performance

For higher machine performance
● Suitable for low-speed and high-torque operations.
● High-accuracy positioning is achieved because the motor is directly coupled to a load.

For easier use
● Since mechanical transmission is no longer required, no backlash and no abrasion occurs, enabling smooth operation with less audible noise, a clean system, and easy maintenance.
● Less components are required for the system.

For flexible machine configurations
● A simple, compact, and high-rigid machine is achieved.
● Machine stability is enhanced due to the low-profile design and a low center of gravity.
● The motor has an inner rotor with hollow shaft that allows cables and pipes to pass through.

[No mechanical transmission contributing to no warp or distortion]

Conventional motor + mechanical transmission (gear, belt, etc.)   Direct drive motor
Application Examples

Suitable for low speed and high torque applications.

| Coating and vapor deposition systems | Spin-type cleaning systems for FPD/semiconductor | FPD/semiconductor testing systems (XYθ tables) |
| Index table for machine tools | Rotary axis for polishing systems | Rotary axis for material handling robots |

Mitsubishi Electric Solutions

e-F@ctory

Maximize productivity and reduce costs with an intelligent smart factory solution

Intelligent smart factories utilize high-speed networks with large data bandwidths to meet current manufacturing needs. The combination of CC-Link IE TSN and Mitsubishi Electric's e-F@ctory solution ensures robust integration between IT and factory automation systems, providing an intelligent smart factory solution that reduces total cost while improving operations, production yield, and efficient management of the supply chain. e-F@ctory is the Mitsubishi Electric solution for adding value across the manufacturing enterprise by enhancing productivity, thereby simultaneously reducing maintenance and operating costs, and enabling the seamless flow of information throughout the plant. e-F@ctory uses a combination of factory automation and IT technologies in combination with various best-in-class partner products through its alliance program.
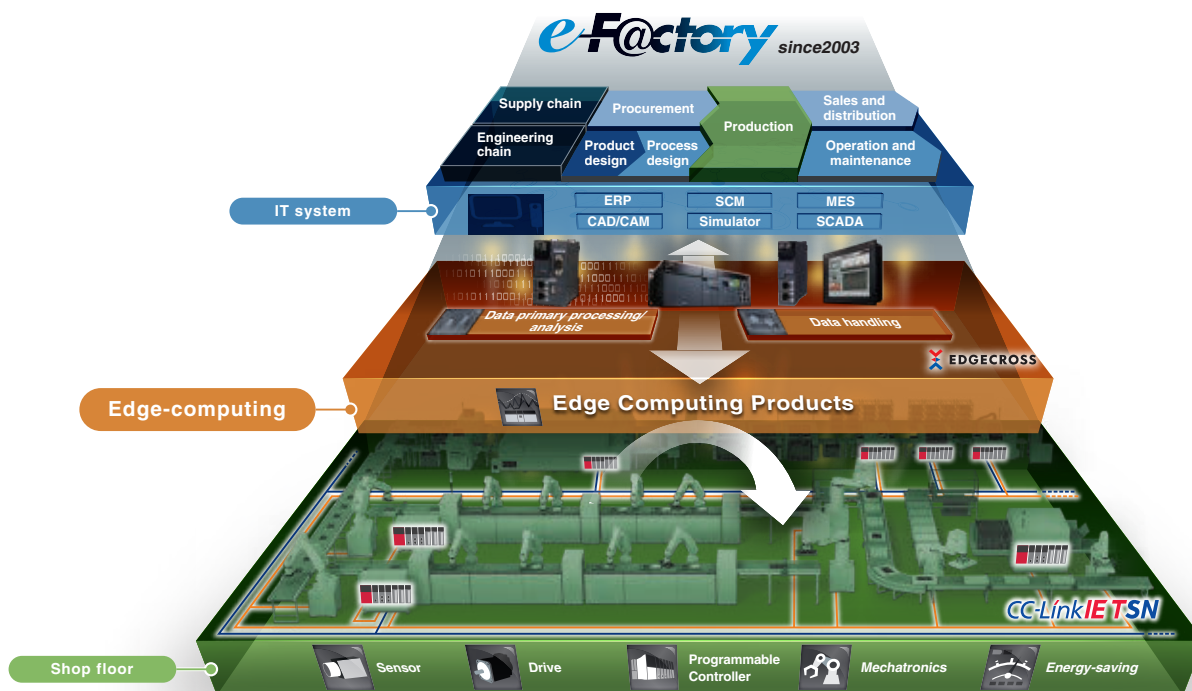

Mitsubishi Electric Partners

e-F@ctory Alliance

The e-F@ctory Alliance is a FA manufacturer partnering program that strongly links the connection compatibility of Mitsubishi Electric FA equipment utilizing excellent software and machinery offered by partners, thereby enabling systems to be built by systems integration partners and the proposal of optimal solutions to customers.

System Integration Partner

Proposing systems solutions for everything from shop floors to information systems.

Software partner

Developing and proposing excellent application software and drivers that ensure the connection compatibility of Mitsubishi Electric FA equipment.

Device Partner

Proposing peripheral equipment that is easy to connect with Mitsubishi Electric FA equipment and is easier to use.

Mitsubishi Electric Servo System Partners

Servo system includes controllers, servo drivers, actuators, sensors, etc. The servo system takes a step further to accelerate the equipment revolution by collaborating with our partner companies. Now that a wide variety of partner products are available such as stepping motors, pressure-resistance, explosion-proof type motors, linear encoders, your system will be configured flexibly.
The Mitsubishi Electric Servo System Partner Association is a subcommittee of e-F@ctory Alliance.
Partner product lines supporting CC-Link IE TSN and MELSERVO-J5 will be expanded sequentially.

Common Specifications

Combinations of Direct Drive Motors and Servo Amplifiers

The maximum torque will be increased by combining the servo amplifiers with a large capacity.
The torque characteristics vary by the combinations. Refer to the list of specifications of each direct drive motor.

Notes: 1. Use the direct drive motors manufactured in June 2019 or later.

Environment

Motion module

Item	Operation/transportation	Storage
Ambient temperature	0 ˚C to 55 ˚C (when not using the extended temperature range base unit) 0 ˚C to 60 ˚C (when using the extended temperature range base unit) [Note 5]	-25 ˚C to 75 ˚C (non-freezing)
Ambient humidity	5 %RH to 95 %RH (non-condensing)	
Ambience	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust	
Altitude	2000 m or less	
Vibration resistance	Under intermittent vibration (directions of X, Y, and Z axes): 5 Hz to 8.4 Hz, displacement amplitude 3.5 mm 8.4 Hz to 150 Hz, acceleration amplitude 9.8 m/s^2 Under continuous vibration: 5 Hz to 8.4 Hz, displacement amplitude 1.75 mm 8.4 Hz to 150 Hz, acceleration amplitude 4.9 m/s^2	

Servo amplifier

Item	Operation	Transportation	Storage
Ambient temperature	0 ˚C to 60 ˚C (non-freezing) Class 3K3 (IEC 60721-3-3)	-25 ˚C to 70 ˚C (non-freezing) Class 2K3 (IEC 60721-3-2)	-25 ˚C to 70 ˚C (non-freezing) Class 1K3 (IEC 60721-3-1)
Ambient humidity	5 %RH to 95 %RH (non-condensing)		
Ambience	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust		
Altitude/atmospheric pressure	Altitude: 2000 m or less [Note 3]	Overland/sea transportation, or transporting on an airplane whose cargo compartment is pressurized at 700 hPa or higher	Atmospheric pressure: 700 hPa to 1060 hPa (Equivalent to altitudes from -400 m to 3000 m)
Vibration resistance	Under intermittent vibration: 10 Hz to 57 Hz, displacement amplitude 0.075 mm 57 Hz to 150 Hz, acceleration amplitude 9.8 m/s^2 Class 3M1 (IEC 60721-3-3) Under continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2	2 Hz to 8 Hz, displacement amplitude (single amplitude) 7.5 mm 8 Hz to 200 Hz, acceleration amplitude 20 m/s^2 Class 2M3 (IEC 60721-3-2)	2 Hz to 9 Hz, displacement amplitude (single amplitude) 1.5 mm 9 Hz to 200 Hz, acceleration amplitude 5 m/s^2 Class 1M2 (IEC 60721-3-1)

Rotary servo motor

Item	Operation	Transportation/storage
Ambient temperature	0 ˚C to 60 ˚C (non-freezing) [Note 2]	-15 ˚C to 70 ˚C (non-freezing)
Ambient humidity	10 %RH to 90 %RH (non-condensing)	
Ambience [Note 1]	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust, no object generating a strong magnetic field	
Altitude	2000 m or less [Note 3]	
External magnetic field	10 mT or less	
Vibration resistance	Refer to the specifications of each rotary servo motor.	

Linear servo motor

Item	Operation	Transportation/storage
Ambient temperature	0 ˚C to 40 ˚C (non-freezing)	-15 ˚C to 70 ˚C (non-freezing)
Ambient humidity	10 %RH to 80 %RH (non-condensing)	10 %RH to 90 %RH (non-condensing)
Ambience	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust	
Altitude	1000 m or less	
Vibration resistance	Refer to the specifications of each linear servo motor.	

Direct drive motor

Item	Operation	Transportation/storage
Ambient temperature	0 ˚C to 40 ˚C (non-freezing)	-15 ˚C to 70 ˚C (non-freezing)
Ambient humidity	10 %RH to 80 %RH (non-condensing)	10 %RH to 90 %RH (non-condensing)
Ambience [Note 1, 4]	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust	
Altitude	2000 m or less [Note 3]	
Vibration resistance	Refer to the specifications of each direct drive motor.	

Notes: 1. Do not use the rotary servo motors in the environment where the servo motor is exposed to oil mist, oil and/or water.
2. Refer to "Rotary Servo Motor User's Manual" for the restrictions on the ambient temperature.
3. Refer to user's manual of each servo amplifier and servo motor for the restrictions when using the servo amplifiers and servo motors at an altitude exceeding 1000 m.
4. Do not place any object (such as a magnet) which generates a magnetic force near the direct drive motor. If it is unavoidable, take a measure such as mounting a shielding plate and so on to cut off the magnetic force.
5. RD78GH can be used at an ambient temperature exceeding 55 °C in the future.

2 Servo System Controllers

Motion Module/Motion Control Software

Control specifications

Item		Specifications		
		MELSEC iQ-R series		SWM78 Motion Control Software `Available soon`
		RD78GH `Available soon`	RD78G	
Maximum number of control axes		RD78GHV: 128 axes RD78GHW: 256 axes	RD78G4: 4 axes RD78G8: 8 axes RD78G16: 16 axes RD78G32: 32 axes RD78G64: 64 axes	16 axes/32 axes/64 axes/ 128 axes/256 axes
Maximum number of connectable stations		120 stations	64 stations	120 stations
Operation cycle (operation cycle settings) (Note 1) [μs]		31.25, 62.5, 125, 250, 500, 1000, 2000, 4000	62.5 (supported soon), 125, 250, 500, 1000, 2000, 4000	250, 500, 1000, 2000, 4000
Axis		Real drive, virtual drive, virtual linked axis		
	Axes group	0: Unset 1 or later: the axes group No. for the setting axis		
Interpolation function		Linear interpolation (2 to 4 axes), 2-axis circular interpolation		
Control method		Positioning control, direct control		
Acceleration/deceleration process		Trapezoidal acceleration/deceleration, jerk acceleration/deceleration, acceleration/deceleration time fixed method		
Compensation function		Driver unit conversion		
Synchronous control	Module	Master axis, cam, gear		
	Master axis	Real drive axis, virtual drive axis		
Operation profile (cam data)	Cam data	Cam data, cam for a rotary knife		
	Motion control FB (Cam auto-generation)	Cam for a rotary knife		
Control unit		Unit character string and decimal digit can be defined by user. (The following is given units: mm, inch, degree, pulse)		
Programming language		PLC CPU: ladder diagram, function block diagram/ladder diagram, structured text language Motion module: structured text language		C++ language
Backup		Parameters and programs can be saved on a flash ROM (batteryless backup)		Storage of IPC
Start/stop operation		Start, stop, restart, buffer mode, forced stop		
Homing	Homing method	Driver homing method (use the homing method set in the driver.) Data set method		
Positioning control	Linear control	Linear interpolation (2 to 4 axes)		
	2-axis circular interpolation	Border point-specified, central point-specified, radius-specified circular interpolation		
Manual control	JOG operation	Provided		
Direct control	Speed control (Note 2)	Speed control not including positioning loop, Speed control including position loop		
	Torque control (Note 2)	Torque control		
Absolute position system		Provided (batteryless)		
Functions that limit control	Speed limit	Speed command range		
	Torque limit	Torque limit value (forward direction, negative direction)		
	Forced stop	Valid/Invalid setting		
	Software stroke limit	Movable range check with current feed value, movable range check with machine feed value		
	Hardware stroke limit	Provided		
Functions that change control details	Command speed change	Provided		
	Current value change	Provided		
	Acceleration/deceleration process change	Acceleration/deceleration, acceleration/deceleration time		
	Torque limit value change	Provided		
	Target position change	Target position change, movement distance change		
Other functions	History data	Event history		
	Logging	Data logging		
	Slave emulate	Provided		

Notes: 1. The number of controllable axes varies depending on the operation cycle.
2. These are the functions of Motion modules.

Motion Module/Motion Control Software

CC-Link IE TSN

Item		Specifications		
		MELSEC iQ-R series		SWM78 Motion Control
		RD78GH Available soon	RD78G	Software Available soon
Communications speed	[bps]	1 G		
Maximum stations per network		121 stations (including the master station)	65 stations (including the master station)	121 stations (including the master station)
Connection cable		Ethernet cable (category 5e or higher, double shielded/STP) straight cable		
Maximum distance between stations	[m]	100		
Maximum number of networks		239		
Topology (Note 1)		Line type, star type, line/star mixed type		
Communications methods		Time-sharing method		
Maximum transient transmission capacity		1920 bytes		

Notes: 1. Use a switching hub (authentication class: B) for star topology.

Certified Class

CC-Link IE TSN certifies nodes and switches to a specific class level according to its functionality and performance classification. Products can be classified as either class A or B. For the certified classification of each product, please check the CC-Link partner association website or the relevant product catalog or manual. Supported functions and system configuration may differ according to the certified class of products used. For example, products compatible with certified class B are necessary to configure a high-speed motion control system. For details of configuring systems with both class A and class B devices, please refer to relevant master product manual.

System configuration
● Synchronous accuracy of a system varies relative to the combination of connected devices and switches certification class
● Use class B devices when configuring a system within ±1 μs high-accuracy synchronization, connect class A devices to a separate branch line from class B devices (for details of system configuration, please refer to relevant master product manual)

Item	RD78GH [Available soon]	RD78G
Maximum number of control axes	RD78GHV: 128 axes RD78GHW: 256 axes	RD78G4: 4 axes RD78G8: 8 axes RD78G16: 16 axes RD78G32: 32 axes RD78G64: 64 axes
Maximum number of connectable stations	120 stations	64 stations
Servo amplifier connection method	CC-Link IE TSN	
Authentication class	B	B
Maximum distance between stations [m]	100	
PERIPHERAL I/F	Via CPU module (USB, Ethernet)	
Extended memory	SD memory card	
Number of ports for CC-Link IE TSN	2 ports	1 port
Number of I/O points occupied	32 points + 16 points (empty slot)	32 points
Number of slots occupied	2 slots	1 slot
5 V DC internal current consumption [A]	2.33	1.93
Mass [kg]	0.44	0.26
Dimensions [mm]	106.0 (H) × 56.0 (W) × 110.0 (D)	106.0 (H) × 27.8 (W) × 110.0 (D)

Program specifications

Item		RD78GH [Available soon]	RD78G
Program capacity		Built-in ROM max. 64 [MB] + SD memory card	Built-in ROM max. 16 [MB] + SD memory card
Maximum program capacity memory		RD78G: 96 [MB], RD78GH: 160 [MB]	
Variable memory	Label area	ST language program capacity and label memory capacity are settable.	
Data memory		- (equivalent to program capacity)	
Maximum number of files	Program	512 files (1 program definable per file)	
	FB/FUN	128 files (64 FBs/FUNs definable per file)	
	Global label	1 file (16384000 labels definable per file)	
Code size per program		- (depends on the program memory)	

Synchronous control specifications

FB	Description
MC_CamIn	Starts cam operation.
MC_GearIn	Starts gear operation.
MC_CombineAxes	Combines the motion of 2 axes.
MCv_ChangeCycle	Changes the current value per cycle.
MCv_SmoothingFilter	Enables smoothing filter.

Notes: 1. The number of usable function blocks depends on the program capacity.

Item		RD78GH [Available soon]	RD78G
Memory capacity		Built-in ROM max. 64 [MB] + SD memory card	Built-in ROM max. 16 [MB] + SD memory card
Maximum number of cam registration		60000 (1024 out of 60000 can be set on engineering tool)	
Cam data	Cam type	Cam data, cam for a rotary knife	
	Interpolation method	Section interpolation, linear interpolation, spline interpolation	
	Profile ID	1 to 60000	
	Resolution	8 to 65535 (any resolution within the range)	
	Units for length per cycle	mm, inch, pulse, degree, or user-defined units	
	Units for stroke	%, mm, inch, pulse, degree, or user-defined units	
Cam auto-generation		Cam for a rotary knife	

Motion Module

Function blocks (FB) list

Type	Name	Description
MCFB (motion)	MC_CamIn	Starts cam operation.
	MC_CombineAxes	Combines the motion of 2 axes.
	MC_GearIn	Starts gear operation.
	MC_GroupStop	Executes a forced stop for an axes group.
	MC_Home	Executes homing.
	MC_MoveAbsolute	Executes positioning (absolute).
	MC_MoveRelative	Executes positioning (relative).
	MC_MoveVelocity	Executes speed control.
	MC_Stop	Executes a forced stop.
	MC_TorqueControl	Torque control
	MCv_Jog	Executes JOG operation
	MCv_MoveCircularInterpolateAbsolute	Executes circular interpolation control (absolute).
	MCv_MoveCircularInterpolateRelative	Executes circular interpolation control (relative).
	MCv_MoveLinearInterpolateAbsolute	Executes linear interpolation control (absolute).
	MCv_MoveLinearInterpolateRelative	Executes linear interpolation control (relative).
	MCv_SmoothingFilter	Enables smoothing filter.
	MCv_SpeedControl	Executes speed control (including position loop).
MCFB (administrative)	MC_CamTableSelect	Selects cam tables.
	MC_GroupDisable	Disables an axes group.
	MC_GroupEnable	Enables an axes group.
	MC_Power	Controls the power stage (ON or OFF) for a single axis.
	MC_SetPosition	Changes the current position.
	MCv_AllPower	Controls the power stage (ON or OFF) for all axes.
	MCv_ChangeCycle	Changes the current value per cycle.
	MCv_SetTorqueLimit	Sets torque limits.
General FB	MCv_ReadProfileData	Reads profile data.
	MCv_WriteProfileData	Writes profile data.

Partner products

INtime® TenAsys Corporation

Real-time motion control is realized by Windows® PC.

INtime is the real-time OS products which extend real-time performance for Windows® PC.
Real-time control is realizable only by installing in usual Windows® PC.
Since parallel operation is carried out with Windows®, both the Windows® side processings, such as HMI and log file save, and the machine control processings which needs real-time performance are able to be realized on one set of hardware.

1010	1	1	-
222	0.2	0.2	0.2
444	0.4	0.4	0.4

Symbol	Number of axes
W2	2 axes
W3	3 axes

Notes: 1. This section describes what each symbol in a model name indicates. Some combinations of symbols are not available.
2. A-axis, B-axis, and C-axis indicate names of axes of the multi-axis servo amplifier. The C-axis is available for the 3-axis servo amplifier.

MR-J5-G/MR-J5-G-RJ Connections with Peripheral Equipment (Note 1)

G   G-RJ

Peripheral equipment is connected to MR-J5-G/MR-J5-G-RJ as described below. Connectors, cables, options, and other necessary equipment are available so that users can set up the servo amplifier easily and start using it right away.

Molded-case circuit breaker (MCCB)

This protects the power supply line.

Magnetic contactor (MC)

This turns off the main circuit power supply to the servo amplifier when an alarm is triggered.

Power factor improving DC reactor (option)

This boosts the power factor of servo amplifier and reduces the power supply capacity.

Regenerative option (option)

Charge light

The light turns on when the main circuit power supply is charged.

Encoder connector (CN2)

Connect the servo motor encoder using an option cable or connector set.

Load-side encoder connector (CN2L)

CN2L connector is available only on MR-J5-G-RJ servo amplifiers. Refer to p. 3-11 in this catalog for details.

Battery connector (CN4)

Connect a battery (MR-BAT6V1SET or MR-BAT6V1SET-A) when configuring absolute position detection system with a direct drive motor.

Battery

Servo motor

Display (Note 2)

Servo amplifier status and alarm number are displayed.

Rotary switches (Note 2)

Select the station with SW1 and SW2.

CC-Link IE TSN

Motion module		Motion Control Software
RD78G	RD78GH (available soon)	SWM78 (available soon)

Ethernet cable (Note 3)

CC-Link IE TSN communication connector (CN1A/CN1B)

Connect to a CC-Link IE TSN compatible device.

USB communication connector (CN5)

Connect a personal computer, and use MR Configurator2. Parameter setting and monitoring are possible. Use an optional USB cable (MR-J3USBCBL3M).

Analog monitor output connector (CN6)

Speed and torque are output with analog voltage signals (2 channels).

STO I/O signal connector (CN8)

Connect an external safety relay. Use an option STO cable (MR-D05UDL3M-B).

I/O signal connector (CN3)

Connect the forced stop input, the in-position, the electromagnetic brake interlock, and the malfunction signals.
Connect a programmable controller I/O port or a control cabinet of a machine via the junction terminal block.

Notes: 1. Refer to "MR-J5 User's Manual" for the actual connections.
   2. This picture shows when the display cover is open.
   3. For specifications of the Ethernet cable, refer to "Ethernet Cable Specifications" on p. 7-26 in this catalog.

MR-J5-G/MR-J5-G-RJ (CC-Link IE TSN) Specifications `G` `G-RJ`

Servo amplifier model MR-J5-_(-RJ)			10G	20G	40G	60G	70G	100G	200G	350G
Output	Voltage		3-phase 0 V AC to 240 V AC							
	Rated current [A]		1.3	1.8	2.8	3.2	5.8	6.0	11.0	17.0
Main circuit power supply input	Voltage/ frequency (Note 1)	AC input	3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz					3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz (Note 7)		3-phase 200 V AC to 240 V AC, 50 Hz/60 Hz
		DC input (Note 8)	283 V DC to 340 V DC							
	Rated current (Note 6) [A]		0.9	1.5	2.6	3.2	3.8	5.0	10.5	16.0
	Permissible voltage fluctuation	AC input	3-phase or 1-phase 170 V AC to 264 V AC					3-phase or 1-phase 170 V AC to 264 V AC (Note 7)		3-phase 170 V AC to 264 V AC
		DC input (Note 8)	241 V DC to 374 V DC							
	Permissible frequency fluctuation		±5 % maximum							
Control circuit power supply input	Voltage/ frequency	AC input	1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz							
		DC input (Note 8)	283 V DC to 340 V DC							
	Rated current [A]		0.2							
	Permissible voltage fluctuation	AC input	1-phase 170 V AC to 264 V AC							
		DC input (Note 8)	241 V DC to 374 V DC							
	Permissible frequency fluctuation		±5 % maximum							
	Power consumption [W]		30							
Interface power supply			24 V DC ± 10 % (required current capacity: 0.3 A (including CN8 connector signals))							
Control method			Sine-wave PWM control/current control method							
Permissible regenerative power of the built-in regenerative resistor (Note 2, 3) [W]			-	10			30		100	
Dynamic brake (Note 4)			Built-in							
CC-Link IE TSN	Communication cycle (Note 10)		31.25 μs, 62.5 μs, 125 μs, 250 μs, 500 μs, 1 ms, 2 ms, 4 ms							
	Authentication class		Class B							
Communication function	USB		Connect a personal computer (MR Configurator2 compatible)							
Encoder output pulse			Compatible (A/B/Z-phase pulse)							
Analog monitor			2 channels							
Servo functions			Advanced vibration suppression control II, adaptive filter II, robust filter, quick tuning, auto tuning, one-touch tuning, tough drive function, drive recorder function, machine diagnosis function (including failure prediction), power monitoring function, lost motion compensation function							
Protective functions			Overcurrent shut-off, regenerative overvoltage shut-off, overload shut-off (electronic thermal), servo motor overheat protection, encoder error protection, regenerative error protection, undervoltage protection, instantaneous power failure protection, overspeed protection, error excessive protection, magnetic pole detection protection, linear servo control fault protection							
Functional safety			STO (IEC/EN 61800-5-2)							
Safety performance	Standards certified by CB (Note 9)		EN ISO 13849-1:2015 Category 3 PL e, IEC 61508 SIL 3, EN 62061 SIL CL 3, EN 61800-5-2							
	Response performance		8 ms or less (STO input OFF → energy shut-off)							
	Test pulse input (STO) (Note 5)		Test pulse interval: 1 Hz to 25 Hz, test pulse off time: 1 ms maximum							
	Mean time to dangerous failure (MTTFd)		MTTFd ≥ 100 [years] (314a)							
	Diagnostic coverage (DC)		DC = Medium, 97.6 [%]							
	Probability of dangerous Failure per Hour (PFH)		PFH = 6.4 × 10^{-9} [1/h]							
Structure (IP rating)			Natural cooling, open (IP20)				Force cooling, open (IP20)			
Close mounting	3-phase power supply input		Possible (Note 11)							
	1-phase power supply input		Possible (Note 11)					Not possible		-
Mass [kg]			0.8		1.0		1.4		2.2	

Notes: 1. Rated output and speed of a rotary servo motor and a direct drive motor; and continuous thrust and maximum speed of a linear servo motor are applicable when the servo amplifier is operated within the specified power supply voltage and frequency.
2. Select the most suitable regenerative option for your system with our drive system sizing software Motorizer.
3. Refer to "Regenerative Option" in this catalog for the permissible regenerative power [W] when a regenerative option is used.
4. When using the dynamic brake, refer to "MR-J5 User's Manual" for the permissible load to motor inertia ratio and the permissible load to mass ratio.
5. The test pulse is a signal for the external circuit to perform self-diagnosis by turning off the signals to the servo amplifier instantaneously at regular intervals.
6. This value is applicable when a 3-phase power supply is used.
7. When a 1-phase 200 V AC to 240 V AC power supply is used, use the servo amplifiers at 75 % or less of the effective load ratio.
8. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".
9. The safety level depends on the setting value of [Pr. PF18 STO diagnosis error detection time] and whether or not STO input diagnosis is performed by TOFB output. Refer to "MR-J5 User's Manual" for details.
10. The command communication cycle depends on the controller specifications and the number of axes connected.
11. When the servo amplifiers are closely mounted, keep the ambient temperature within 0 °C to 45 °C, or use the servo amplifiers at 75 % or less of the effective load ratio.

· SWM78 (available soon)

CC-Link IE TSN (Note 5)

CC-Link IE TSN (Note 5)

(Note 1) (Note 1)
SW1   SW2

Notes: 1. Up to 254 stations are set with a combination of the rotary switches (SW1 and SW2). Note that the number of the connectable stations depends on the controller specifications.
2. This is for sink wiring. Source wiring is also possible.
3. Attach a short-circuit connector supplied with the servo amplifier when the STO function is not used.
4. To prevent an unexpected restart of the servo amplifier, create a circuit to turn off EM2 (Forced stop 2) when the main circuit power is turned off.
5. When branching off CC-Link IE TSN (synchronous communication function) with a switching hub, use a switching hub (Class B) recommended by CC-Link Partner Association. When a switching hub (Class A) is used, there are restrictions on the topologies to be used. Refer to "MELSEC iQ-R Motion Module User's Manual" for details.
6. Devices for these pins can be changed with [Pr. PD03], [Pr. PD04], and [Pr. PD05].
7. Devices for these pins can be changed with [Pr. PD07], [Pr. PD08], and [Pr. PD09].
8. When using a linear servo motor or direct drive motor, use MBR (Electromagnetic brake interlock) for an external brake mechanism.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Amplifiers

STO I/O Signal Connector (CN8) Connection Example

Notes: 1. When using the STO function, turn off STO1 and STO2 at the same time. Turn off STO1 and STO2 after the servo motor stops in servo-off state or after the servo motor stops with deceleration by turning off EM2 (Forced stop 2).
2. To prevent an unexpected restart of the servo amplifier, create a circuit to turn off EM2 (Forced stop 2) when the main circuit power is turned off.
3. If the controller does not have a forced stop function, install a forced stop 2 switch (normally closed contact).
4. Turn on EM2 (Forced stop 2) before starting the operation.
5. The connector and the pin numbers for each signal vary depending on the servo amplifier. Refer to the standard wiring diagram example for the relevant servo amplifier in this catalog for details.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Main/Control Circuit Power Supply Connection Example (Note 6)

● For 3-phase 200 V AC and driving on/off of main circuit power supply with AC power supply

● For 3-phase 200 V AC and driving on/off of main circuit power supply with DC power supply

● For 1-phase 200 V AC and driving on/off of main circuit power supply with AC power supply
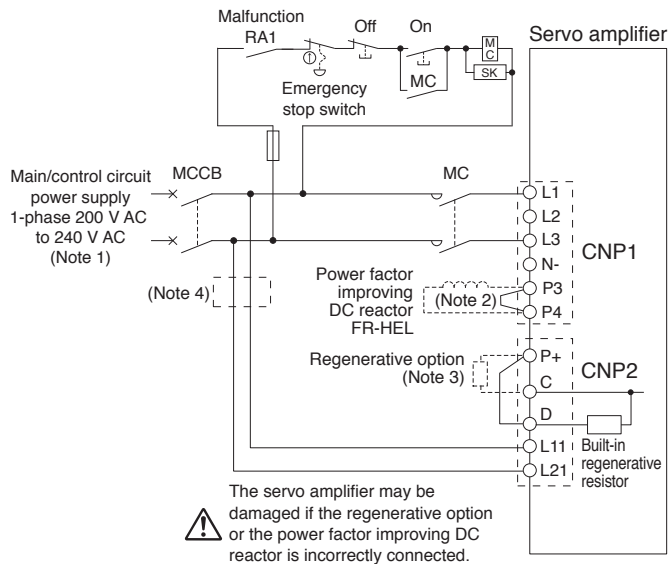

● For 1-phase 200 V AC and driving on/off of main circuit power supply with DC power supply

Notes: 1. For 1-phase 200 V AC to 240 V AC, connect the power supply to L1 and L3 terminals. Do not connect anything to L2.
2. Disconnect a short-circuit bar between P3 and P4 when using the power factor improving DC reactor or the simple converter unit.
3. Disconnect a short-circuit bar between P+ and D when connecting the regenerative option externally.
4. When wires used for L11 and L21 are thinner than those for L1, L2, and L3, use a molded-case circuit breaker or a fuse. Refer to "MR-J5 User's Manual" for details.
5. Do not use the 24 V DC interface power supply for the magnetic contactor. Provide a dedicated power supply to the magnetic contactor.
6. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".
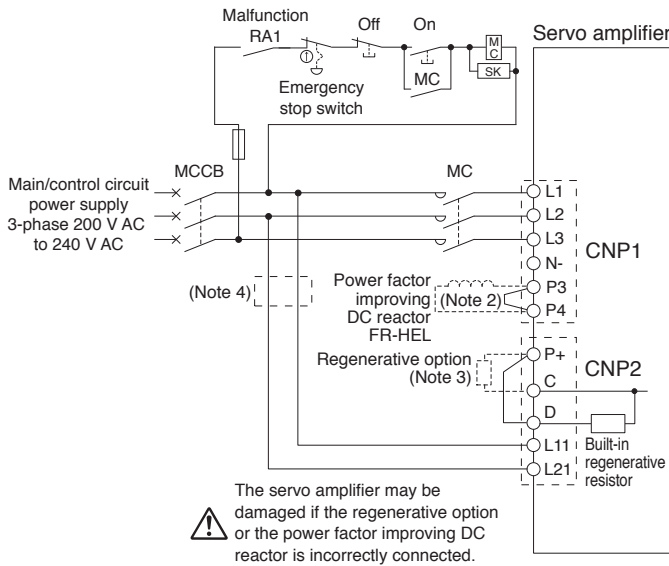

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Amplifiers

Servo Motor Connection Example (Rotary Servo Motor)

● For HK-KT series

● For HK-ST series

Notes:
1. Create the circuit in order to shut off by being interlocked with the emergency stop switch.
2. This is for the servo motors with an electromagnetic brake. The electromagnetic brake terminals (B1, B2) do not have polarity.
3. Connect the grounding wire to the cabinet protective earth (PE) terminal via the servo amplifier protective earth (PE) terminal for grounding.
4. Do not use the 24 V DC interface power supply for the electromagnetic brake. Provide a dedicated power supply to the electromagnetic brake.
5. Install a surge absorber between B1 and B2.
6. This is for using an option dual cable type. Single cable types are also available.
7. Encoder cables are available as an option.
8. Refer to "Rotary Servo Motor User's Manual" when fabricating the cables.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Motor Connection Example (Linear Servo Motor)

Linear Servo System with MR-J5-G/MR-J5-A

● For LM-H3/LM-F/LM-K2/LM-U2 series
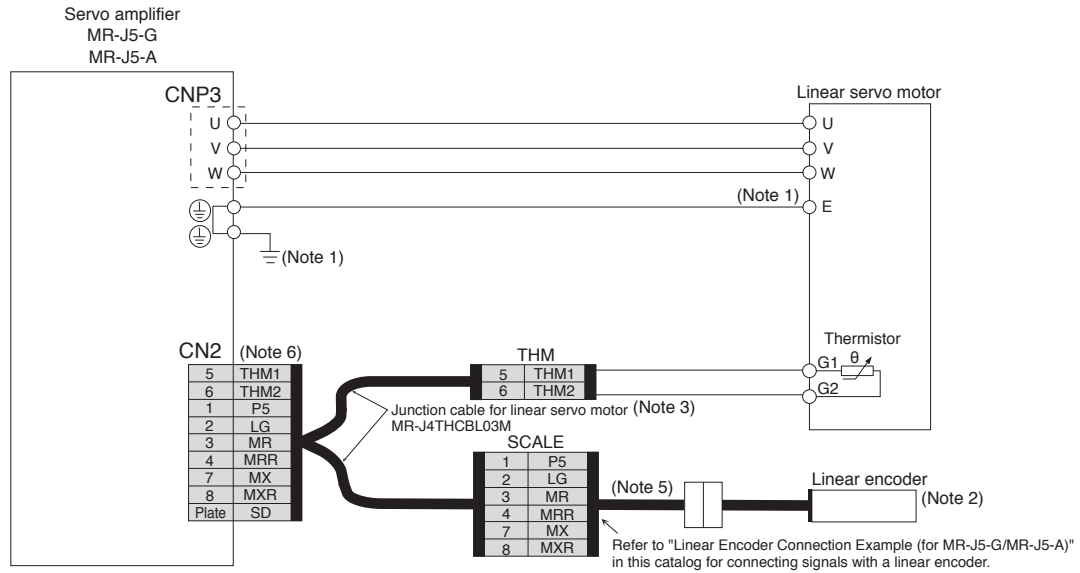

Linear Encoder Connection Example (for MR-J5-G/MR-J5-A)

Notes: 1. Connect the grounding wire to the cabinet protective earth (PE) terminal via the servo amplifier protective earth (PE) terminal for grounding.
2. For linear encoders, refer to "List of Linear Encoders" in this catalog.
3. MR-J4THCBL03M junction cable for linear servo motor is compatible with both two-wire and four-wire type linear encoders.
4. For the number of the wire pairs for LG and P5, refer to "MR-J5 Partner's Encoder User's Manual."
5. Necessary cables vary depending on the linear encoder. Refer to "MR-J5 Partner's Encoder User's Manual" for details.
6. When using a linear servo motor with MR-J5-G/MR-J5-A, connect MR-J4THCBL03M junction cable or a junction cable fabricated using MR-J3THMCN2 connector set to CN2 connector.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Amplifiers

Servo Motor Connection Example (Linear Servo Motor)   `G-RJ` `A-RJ`

Linear Servo System with MR-J5-G-RJ/MR-J5-A-RJ (LM-H3, LM-F, LM-K2, LM-U2)

● Connecting a serial linear encoder
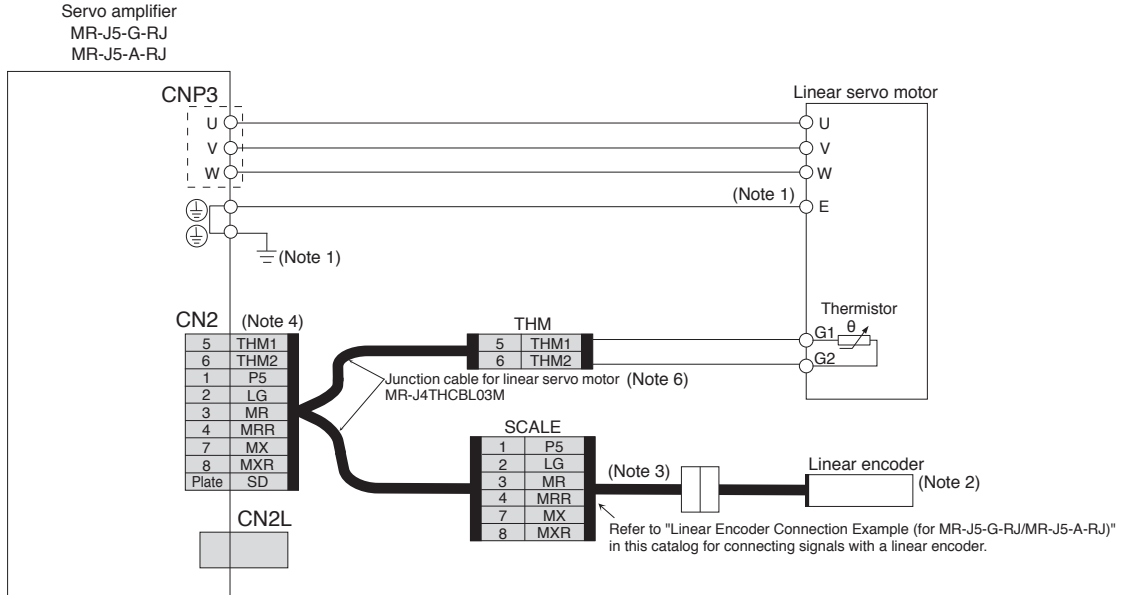

● Connecting an A/B/Z-phase differential output linear encoder
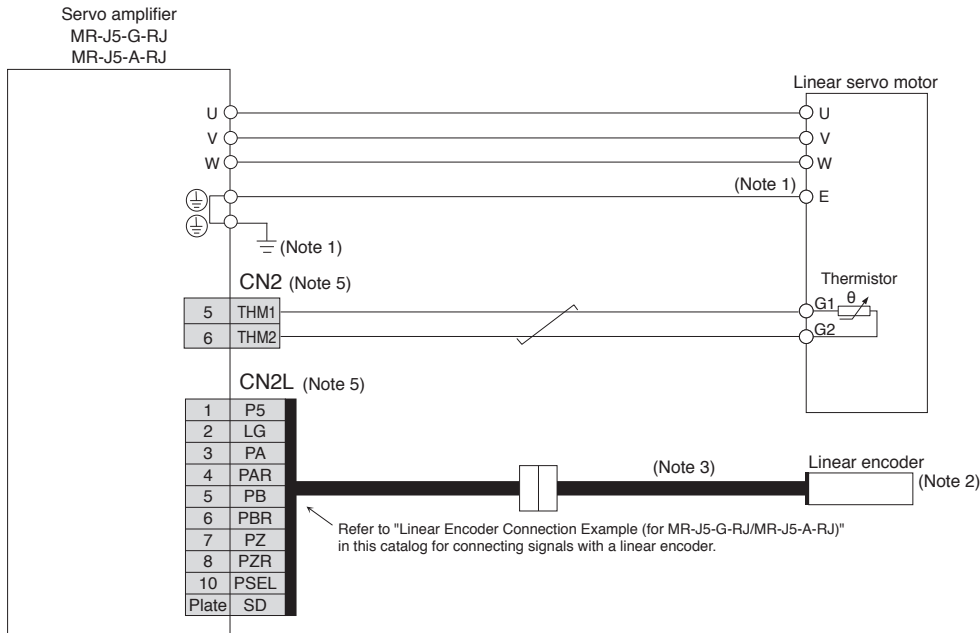

Notes: 1. Connect the grounding wire to the cabinet protective earth (PE) terminal via the servo amplifier protective earth (PE) terminal for grounding.
2. For linear encoders, refer to "List of Linear Encoders" in this catalog.
3. Necessary cables vary depending on the linear encoder. Refer to "MR-J5 Partner's Encoder User's Manual" for details.
4. When configuring a linear servo system with MR-J5-G-RJ/MR-J5-A-RJ servo amplifier and a serial linear encoder, connect MR-J4THCBL03M junction cable or a junction cable fabricated using MR-J3THMCN2 connector set to CN2 connector.
5. When configuring a linear servo system with MR-J5-G-RJ/MR-J5-A-RJ and an A/B/Z-phase differential output type linear encoder, connect a thermistor to CN2 connector and the linear encoder to CN2L connector. Do not use MR-J4THCBL03M junction cable or a junction cable fabricated using MR-J3THMCN2 connector set.
6. MR-J4THCBL03M junction cable for linear servo motor is compatible with both two-wire and four-wire type linear encoders.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.
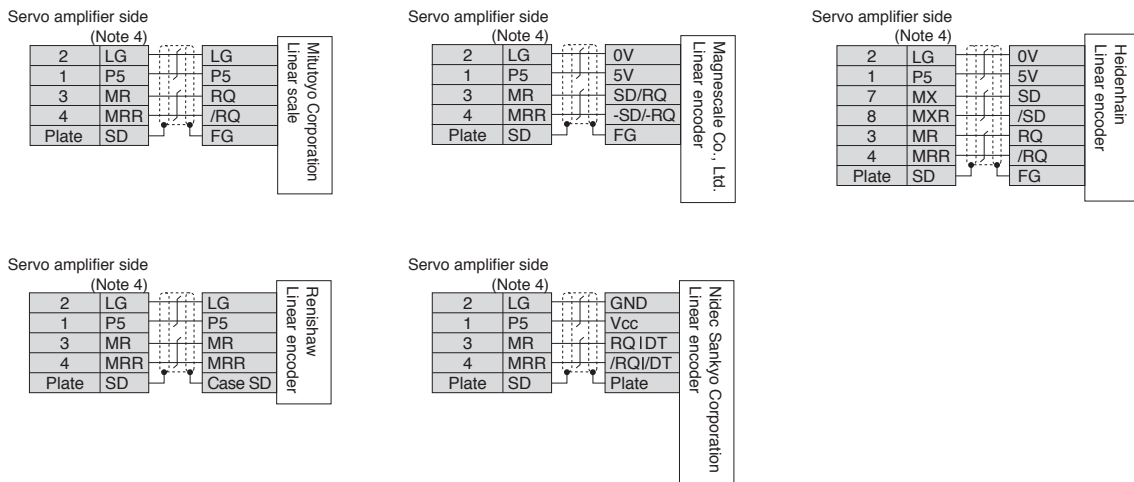

Linear Encoder Connection Example (for MR-J5-G-RJ/MR-J5-A-RJ)
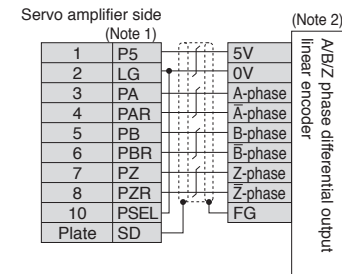

Notes: 1. For the number of the wire pairs for LG and P5, refer to "MR-J5 Partner's Encoder User's Manual."
2. If the encoder's current consumption exceeds 350 mA, supply power from an external source.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Encoder Connection Specifications

G   G-RJ   WG   A   A-RJ

Refer to the following table for the encoder communication method compatible with linear servo system and for the servo amplifier connector to which a load-side encoder should be connected.

Operation mode	External encoder communication method	Connector to be connected with the external encoder					
		MR-J5-G	MR-J5-G-RJ	MR-J5-A	MR-J5-A-RJ	MR-J5W2-G	MR-J5W3-G
Linear servo system (Note 3)	Two-wire type	CN2 (Note 1)	CN2 (Note 1)	CN2 (Note 1)	CN2 (Note 1)	CN2A (Note 1) CN2B (Note 1)	CN2A (Note 1) CN2B (Note 1) CN2C (Note 1)
	Four-wire type						
	A/B/Z-phase differential output method		CN2L (Note 2)		CN2L (Note 2)		

Notes: 1. MR-J4THCBL03M junction cable is required.
2. Connect a thermistor to CN2 connector.
3. Refer to "Combinations of Linear Servo Motors and Servo Amplifiers" in this catalog for servo amplifiers that are compatible with linear servo motors.

MR-J5W2-G/MR-J5W3-G Connections with Peripheral Equipment (Note 1)   `WG`

Peripheral equipment is connected to MR-J5W2-G/MR-J5W3-G as described below. Connectors, cables, options, and other necessary equipment are available so that users can set up the servo amplifier easily and start using it right away.

Charge light
The light turns on when the main circuit power supply is charged.

Molded-case circuit breaker (MCCB)
This protects the power supply line.

Magnetic contactor (MC)
This turns off the main circuit power supply to the servo amplifier when an alarm is triggered.

Power factor improving AC reactor (option)
This boosts the power factor of servo amplifier and reduces the power supply capacity.

Regenerative option (option)

Display (Note 2)
Servo amplifier status and alarm number are displayed.

Rotary switches (Note 2)
Select the station with SW1 and SW2.

Analog monitor output connector (CN6)
Speed and torque are output with analog voltage signals (2 channels).
This connector is on the top of the servo amplifier.

CC-Link IE TSN

Motion module		Motion Control Software
RD78G	RD78GH (available soon)	SWM78 (available soon)

Ethernet cable (Note 4)

CC-Link IE TSN communication connector (CN1A/CN1B)
Connect to a CC-Link IE TSN compatible device.
USB communication connector (CN5)
Connect a personal computer, and use MR Configurator2. Parameter setting and monitoring are possible.
Use an optional USB cable (MR-J3USBCBL3M).

(Note 5)

Rotary servo motor

Linear servo motor

Direct drive motor

Encoder connector (CN2A/B/C)
Connect the servo motor encoder using an option cable or connector set.

(PE) (Note 3)

I/O signal connector (CN3)
Connect the forced stop input, the in-position, the electromagnetic brake interlock, and the malfunction signals.

Battery connector (CN4)
Battery case (MR-BT6VCASE) and batteries (MR-BAT6V1) are required when configuring absolute position detection system with a direct drive motor.

Battery

Battery case

Notes: 1. The connection with the peripheral equipment is an example for MR-J5W3-222G. CNP3C and CN2C connectors are not available on MR-J5W2-G. Refer to "MR-J5 User's Manual" for the actual connections of each multi-axis servo amplifier.
2. This picture shows when the display cover is open.
3. Connect the grounding terminal of the servo motor to ⏚ of CNP3A, CNP3B, and CNP3C. Connect the protective earth (PE) terminal (⏚) located on the lower front of the servo amplifier to the cabinet protective earth (PE).
4. For specifications of the Ethernet cable, refer to "Ethernet Cable Specifications" on p. 7-26 in this catalog.
5. Attach a short-circuit connector supplied with the servo amplifier.

MR-J5W2-G (2-axis, CC-Link IE TSN) Specifications   `WG`

Servo amplifier model MR-J5W2-			22G	44G	77G	1010G
Output	Voltage		3-phase 0 V AC to 240 V AC			
	Rated current (each axis) [A]		1.8	2.8	5.8	6.0
Main circuit power supply input	Voltage/ frequency (Note 1)	AC input	3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz			3-phase 200 V AC to 240 V AC, 50 Hz/60 Hz
		DC input (Note 8)	283 V DC to 340 V DC			
	Rated current (Note 6) [A]		2.9	5.2	7.5	9.8
	Permissible voltage fluctuation	AC input	3-phase or 1-phase 170 V AC to 264 V AC			3-phase 170 V AC to 264 V AC
		DC input (Note 8)	241 V DC to 374 V DC			
	Permissible frequency fluctuation		±5 % maximum			
Control circuit power supply input	Voltage/ frequency	AC input	1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz			
		DC input (Note 8)	283 V DC to 340 V DC			
	Rated current [A]		0.4			
	Permissible voltage fluctuation	AC input	1-phase 170 V AC to 264 V AC			
		DC input (Note 8)	241 V DC to 374 V DC			
	Permissible frequency fluctuation		±5 % maximum			
	Power consumption [W]		55			
Interface power supply			24 V DC ± 10 % (required current capacity: 0.35 A (including CN8 connector signals))			
Control method			Sine-wave PWM control/current control method			
Permissible regenerative power of the built-in regenerative resistor (Note 2, 3) [W]			20		100	
Dynamic brake (Note 4)			Built-in			
CC-Link IE TSN	Communication cycle (Note 5)		62.5 μs, 125 μs, 250 μs, 500 μs, 1 ms, 2 ms, 4 ms			
	Authentication class		Class B			
Communication function	USB		Connect a personal computer (MR Configurator2 compatible)			
Encoder output pulse			Compatible (A/B-phase pulse) (Note 9)			
Analog monitor			2 channels			
Servo functions			Advanced vibration suppression control II, adaptive filter II, robust filter, quick tuning, auto tuning, one-touch tuning, tough drive function, drive recorder function, machine diagnosis function (including failure prediction), power monitoring function, lost motion compensation function			
Protective functions			Overcurrent shut-off, regenerative overvoltage shut-off, overload shut-off (electronic thermal), servo motor overheat protection, encoder error protection, regenerative error protection, undervoltage protection, instantaneous power failure protection, overspeed protection, error excessive protection, magnetic pole detection protection, linear servo control fault protection			
Structure (IP rating)			Natural cooling, open (IP20)	Force cooling, open (IP20)		
Close mounting			Possible (Note 7)			
Mass [kg]			1.5		1.9	

Notes: 1. Rated output and speed of a rotary servo motor and a direct drive motor; and continuous thrust and maximum speed of a linear servo motor are applicable when the servo amplifier is operated within the specified power supply voltage and frequency.
2. Select the most suitable regenerative option for your system with our drive system sizing software Motorizer.
3. Refer to "Regenerative Option" in this catalog for the permissible regenerative power [W] when a regenerative option is used.
4. When using the dynamic brake, refer to "MR-J5 User's Manual" for the permissible load to motor inertia ratio and the permissible load to mass ratio.
5. The command communication cycle depends on the controller specifications and the number of axes connected.
6. This value is applicable when a 3-phase power supply is used.
7. When the servo amplifiers are closely mounted, keep the ambient temperature within 0 °C to 45 °C, or use the servo amplifiers at 75 % or less of the effective load ratio.
8. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".
9. A/B-phase pulses are not output at a communication cycle of 62.5 μs.

## MR-J5W3-G (3-axis, CC-Link IE TSN) Specifications

<div style="text-align:right">WG</div>

Servo amplifier model MR-J5W3-			222G	444G
Output	Voltage		3-phase 0 V AC to 240 V AC	
	Rated current (each axis) [A]		1.8	2.8
Main circuit power supply input	Voltage/ frequency (Note 1)	AC input	3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz	
		DC input (Note 8)	283 V DC to 340 V DC	
	Rated current (Note 6) [A]		4.3	7.8
	Permissible voltage fluctuation	AC input	3-phase or 1-phase 170 V AC to 264 V AC	
		DC input (Note 8)	241 V DC to 374 V DC	
	Permissible frequency fluctuation		±5 % maximum	
Control circuit power supply input	Voltage/ frequency	AC input	1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz	
		DC input (Note 8)	283 V DC to 340 V DC	
	Rated current [A]		0.4	
	Permissible voltage fluctuation	AC input	1-phase 170 V AC to 264 V AC	
		DC input (Note 8)	241 V DC to 374 V DC	
	Permissible frequency fluctuation		±5 % maximum	
	Power consumption [W]		55	
Interface power supply			24 V DC ± 10 % (required current capacity: 0.45 A (including CN8 connector signals))	
Control method			Sine-wave PWM control/current control method	
Permissible regenerative power of the built-in regenerative resistor (Note 2, 3) [W]			30	
Dynamic brake (Note 4)			Built-in	
CC-Link IE TSN	Communication cycle (Note 5)		125 µs, 250 µs, 500 µs, 1 ms, 2 ms, 4 ms	
	Authentication class		Class B	
Communication function	USB		Connect a personal computer (MR Configurator2 compatible)	
Encoder output pulse			Compatible only with A-axis and B-axis (A/B-phase pulse) (Note 9)	
Analog monitor			2 channels	
Servo functions			Advanced vibration suppression control II, adaptive filter II, robust filter, quick tuning, auto tuning, one-touch tuning, tough drive function, drive recorder function, machine diagnosis function (including failure prediction), power monitoring function, lost motion compensation function	
Protective functions			Overcurrent shut-off, regenerative overvoltage shut-off, overload shut-off (electronic thermal), servo motor overheat protection, encoder error protection, regenerative error protection, undervoltage protection, instantaneous power failure protection, overspeed protection, error excessive protection, magnetic pole detection protection, linear servo control fault protection	
Structure (IP rating)			Force cooling, open (IP20)	
Close mounting			Possible (Note 7)	
Mass [kg]			1.8	

Notes:
1. Rated output and speed of a rotary servo motor and a direct drive motor; and continuous thrust and maximum speed of a linear servo motor are applicable when the servo amplifier is operated within the specified power supply voltage and frequency.
2. Select the most suitable regenerative option for your system with our drive system sizing software Motorizer.
3. Refer to "Regenerative Option" in this catalog for the permissible regenerative power [W] when a regenerative option is used.
4. When using the dynamic brake, refer to "MR-J5 User's Manual" for the permissible load to motor inertia ratio and the permissible load to mass ratio.
5. The command communication cycle depends on the controller specifications and the number of axes connected.
6. This value is applicable when a 3-phase power supply is used.
7. When the servo amplifiers are closely mounted, keep the ambient temperature within 0 °C to 45 °C, or use the servo amplifiers at 75 % or less of the effective load ratio.
8. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".
9. A/B-phase pulses are not output at a communication cycle of 125 µs.

Servo Amplifiers

Main/Control Circuit Power Supply Connection Example (Note 6)

● For 3-phase 200 V AC and driving on/off of main circuit power supply with AC power supply

● For 3-phase 200 V AC and driving on/off of main circuit power supply with DC power supply

● For 1-phase 200 V AC and driving on/off of main circuit power supply with AC power supply

● For 1-phase 200 V AC and driving on/off of main circuit power supply with DC power supply

Notes:
1. For 1-phase 200 V AC to 240 V AC, connect the power supply to L1 and L3 terminals. Do not connect anything to L2.
2. Disconnect a short-circuit bar between P+ and D when connecting the regenerative option externally.
3. When wires used for L11 and L21 are thinner than those for L1, L2, and L3, use a molded-case circuit breaker or a fuse. Refer to "MR-J5 User's Manual" for details.
4. Select either of the following functions for CALM (AND malfunction) with the controller.
   1) The contact opens when an alarm occurs on one of the axes.
   2) The contact opens when an alarm occurs on all axes.
5. Do not use the 24 V DC interface power supply for the magnetic contactor. Provide a dedicated power supply to the magnetic contactor.
6. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Motor Connection Example (Rotary Servo Motor)

●For HK-KT series

●For HK-ST series

Notes: 1. Create the circuit in order to shut off by being interlocked with the emergency stop switch.
2. This is for the servo motors with an electromagnetic brake. The electromagnetic brake terminals (B1, B2) do not have polarity.
3. Connect the grounding terminal of the servo motor to ⏚ of CNP3A, CNP3B, and CNP3C. Connect the protective earth (PE) terminal (⏚) located on the lower front of the servo amplifier to the cabinet protective earth (PE).
4. Do not use the 24 V DC interface power supply for the electromagnetic brake. Provide a dedicated power supply to the electromagnetic brake.
5. CNP3C and CN2C connectors are available for MR-J5W3-G servo amplifiers.
6. Install a surge absorber between B1 and B2.
7. This is for using an option dual cable type. Single cable types are also available.
8. Encoder cables are available as an option.
9. Refer to "Rotary Servo Motor User's Manual" when fabricating the cables.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Motor Connection Example (Direct Drive Motor)

● For TM-RG2M/TM-RU2M/TM-RFM series (incremental system)
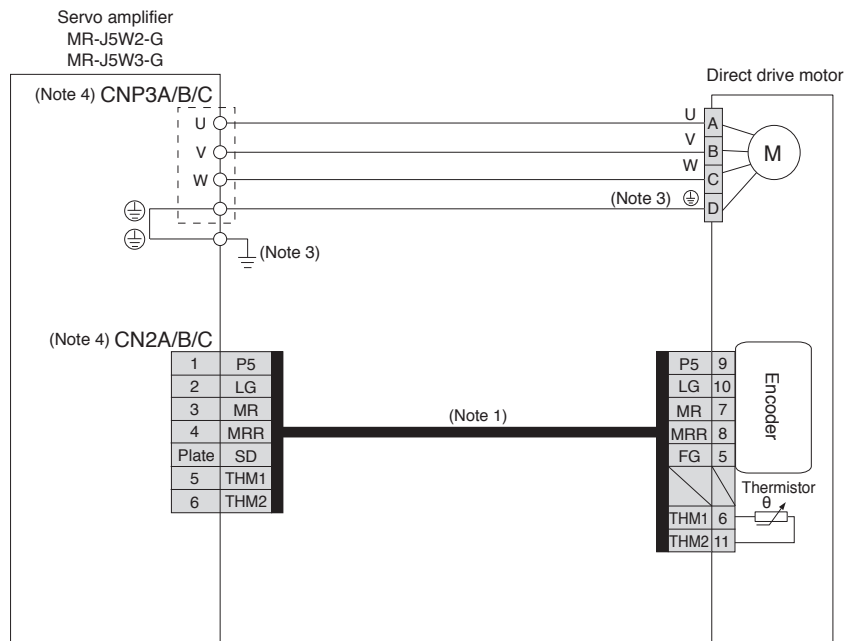

● For TM-RG2M/TM-RU2M/TM-RFM series (absolute position detection system)
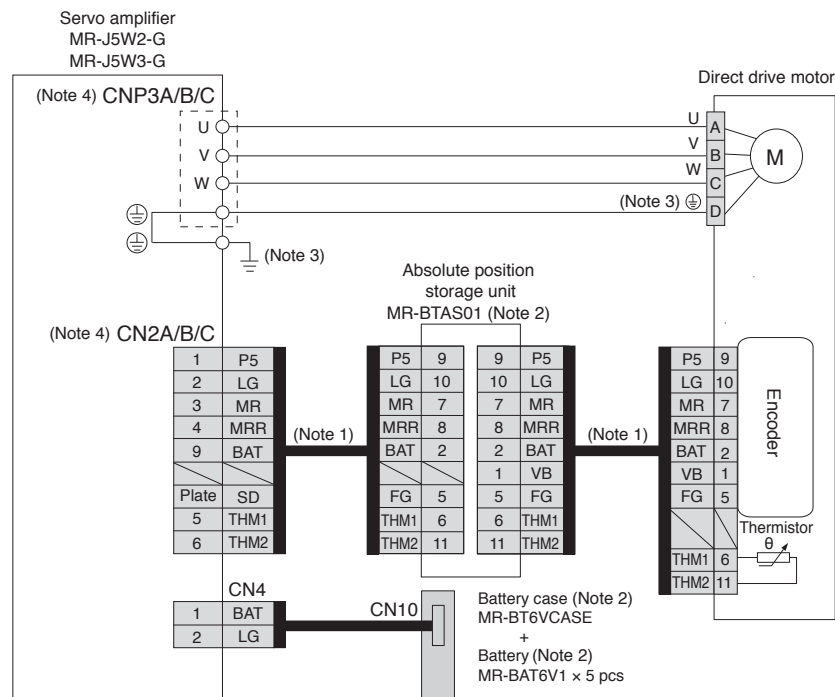

Notes: 1. Fabricate this encoder cable. Refer to "Direct Drive Motor User's Manual" for fabricating the encoder cable.
2. An MR-BTAS01 absolute position storage unit, MR-BT6VCASE battery case, and MR-BAT6V1 batteries (sold as options) are required for absolute position detection system. Refer to "MR-J5 User's Manual" and "Direct Drive Motor User's Manual" for details of absolute position detection system.
3. Connect the grounding terminal of the servo motor to ⏚ of CNP3A, CNP3B, and CNP3C. Connect the protective earth (PE) terminal (⏚) located on the lower front of the servo amplifier to the cabinet protective earth (PE).
4. CNP3C and CN2C connectors are available for MR-J5W3-G servo amplifiers.

⚠ Be sure to read through User's Manual for the actual wiring and use. Use the equipment after you have a full knowledge of the equipment, safety information and instructions.

Servo Amplifiers

MR-J5-A/MR-J5-A-RJ Connections with Peripheral Equipment (Note 1)

Peripheral equipment is connected to MR-J5-A/MR-J5-A-RJ as described below. Connectors, cables, options, and other necessary equipment are available so that users can set up the servo amplifier easily and start using it right away.

Display (Note 2)

Servo amplifier status, servo parameter, and alarm number are displayed.

Molded-case circuit breaker (MCCB)

This protects the power supply line.

Magnetic contactor (MC)

This turns off the main circuit power supply to the servo amplifier when an alarm is triggered.

Power factor improving DC reactor (option)

This boosts the power factor of servo amplifier and reduces the power supply capacity.

Regenerative option (option)

Charge light

The light turns on when the main circuit power supply is charged.

Encoder connector (CN2)

Connect the servo motor encoder using an option cable or connector set.

Load-side encoder connector (CN2L)

CN2L connector is available only on MR-J5-A-RJ servo amplifiers. Refer to p. 3-11 in this catalog for details.

Battery connector (CN4)

Connect a battery (MR-BAT6V1SET or MR-BAT6V1SET-A) when configuring absolute position detection system with a direct drive motor.

Battery

Servo motor

Setting section (Note 2)

Servo parameter settings and monitoring, etc., are executed with push buttons.

(Note 3)

USB communication connector (CN5)

Connect a personal computer, and use MR Configurator2. Parameter setting and monitoring are possible. Use an optional USB cable (MR-J3USBCBL3M).

Analog monitor output connector (CN6)

Speed and torque are output with analog voltage signals (2 channels).

STO I/O signal connector (CN8)

Connect an external safety relay. Use an option STO cable (MR-D05UDL3M-B).

I/O signal connector (CN3)

Connect a Mitsubishi Electric controller or any pulse train output controller.

FX5U	FX5UC	FX3U-1PG	RD75P_	RD75D_
FX3U	FX3UC		QD70P_	QD70D_
FX3G	FX3GC		QD75P_N	QD75D_N
			LD75P_	LD75D_

Connect a programmable controller I/O port or a control cabinet of a machine via the junction terminal block.

Notes: 1. Refer to "MR-J5 User's Manual" for the actual connections.
2. This picture shows when the display cover is open.
3. This is for manufacturer setting.

MR-J5-A/MR-J5-A-RJ (General-Purpose Interface) Specifications $\boxed{A}$ $\boxed{A\text{-RJ}}$

Servo amplifier model MR-J5-_(-RJ)			10A	20A	40A	60A	70A	100A	200A	350A

	Rated current [A]		1.3	1.8	2.8	3.2	5.8	6.0	11.0	17.0
Main circuit power supply input	Voltage/ frequency (Note 1)	AC input	3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz					3-phase or 1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz (Note 7)		3-phase 200 V AC to 240 V AC, 50 Hz/60 Hz
		DC input (Note 8)	283 V DC to 340 V DC							
	Rated current (Note 6) [A]		0.9	1.5	2.6	3.2	3.8	5.0	10.5	16.0
	Permissible voltage fluctuation	AC input	3-phase or 1-phase 170 V AC to 264 V AC					3-phase or 1-phase 170 V AC to 264 V AC (Note 7)		3-phase 170 V AC to 264 V AC
		DC input (Note 8)	241 V DC to 374 V DC							
	Permissible frequency fluctuation		±5 % maximum							
Control circuit power supply input	Voltage/ frequency	AC input	1-phase 200 V AC to 240 V AC, 50 Hz/60 Hz							
		DC input (Note 8)	283 V DC to 340 V DC							
	Rated current [A]		0.2							
	Permissible voltage fluctuation	AC input	1-phase 170 V AC to 264 V AC							
		DC input (Note 8)	241 V DC to 374 V DC							
	Permissible frequency fluctuation		±5 % maximum							
	Power consumption [W]		30							
Interface power supply			24 V DC ± 10 % (required current capacity: 0.5 A (including CN8 connector signals))							
Control method			Sine-wave PWM control/current control method							
Permissible regenerative power of the built-in regenerative resistor (Note 2, 3) [W]			-	10		30		100		
Dynamic brake (Note 4)			Built-in							
Communication function	USB		Connect a personal computer (MR Configurator2 compatible)							
Encoder output pulse			Compatible (A/B/Z-phase pulse)							
Analog monitor			2 channels							
Position control mode	Maximum input pulse frequency		4 Mpulses/s (when using differential receiver), 200 kpulses/s (when using open collector)							
	Positioning feedback pulse		Encoder resolution: 26 bits							
	Command pulse multiplying factor		Electronic gear A/B multiple, A: 1 to 2147483647, B: 1 to 2147483647, 1/10 < A/B < 64000							
	In-position range setting		0 pulse to ±16777215 pulses (command pulse unit)							
	Error excessive		±3 rotations							
	Torque limit		Set by servo parameters or external analog input (0 V DC to +10 V DC/maximum torque)							
Speed control mode	Speed control range		Analog speed command 1:2000, internal speed command 1:5000							
	Analog speed command input		0 V DC to ±10 V DC/rated speed (Speed at 10 V is changeable with [Pr. PC12].)							
	Speed fluctuation rate		±0.01 % maximum (load fluctuation: 0 % to 100 %), 0 % (power fluctuation: ±10 %) ±0.2 % maximum (ambient temperature: 25 °C ± 10 °C) only when using analog speed command							
	Torque limit		Set by servo parameters or external analog input (0 V DC to +10 V DC/maximum torque)							
Torque control mode	Analog torque command input		0 V DC to ±8 V DC/maximum torque (input impedance: 10 kΩ to 12 kΩ)							
	Speed limit		Set by servo parameters or external analog input (0 V DC to ± 10 V DC/rated speed)							
Servo functions			Advanced vibration suppression control II, adaptive filter II, robust filter, quick tuning, auto tuning, one-touch tuning, tough drive function, drive recorder function, machine diagnosis function (including failure prediction), power monitoring function, lost motion compensation function							
Protective functions			Overcurrent shut-off, regenerative overvoltage shut-off, overload shut-off (electronic thermal), servo motor overheat protection, encoder error protection, regenerative error protection, undervoltage protection, instantaneous power failure protection, overspeed protection, error excessive protection, magnetic pole detection protection, linear servo control fault protection							
Functional safety			STO (IEC/EN 61800-5-2)

MR-J5-A/MR-J5-A-RJ (General-Purpose Interface) Specifications

`A` `A-RJ`

Servo amplifier model MR-J5-_(-RJ)		10A	20A	40A	60A	70A	100A	200A	350A
Safety performance	Standards certified by CB [Note 9]	EN ISO 13849-1:2015 Category 3 PL e, IEC 61508 SIL 3, EN 62061 SIL CL 3, EN 61800-5-2							
	Response performance	8 ms or less (STO input OFF → energy shut-off)							
	Test pulse input (STO) [Note 5]	Test pulse interval: 1 Hz to 25 Hz, test pulse off time: 1 ms maximum							
	Mean time to dangerous failure (MTTFd)	MTTFd ≥ 100 [years] (314a)							
	Diagnostic coverage (DC)	DC = Medium, 97.6 [%]							
	Probability of dangerous Failure per Hour (PFH)	PFH = 6.4×10^{-9} [1/h]							
Structure (IP rating)		Natural cooling, open (IP20)					Force cooling, open (IP20)		
Close mounting	3-phase power supply input	Possible [Note 10]							
	1-phase power supply input	Possible [Note 10]					Not possible		-
Mass [kg]		0.8					1.0	1.4	2.2

Notes: 1. Rated output and speed of a rotary servo motor and a direct drive motor; and continuous thrust and maximum speed of a linear servo motor are applicable when the servo amplifier is operated within the specified power supply voltage and frequency.
2. Select the most suitable regenerative option for your system with our drive system sizing software Motorizer.
3. Refer to "Regenerative Option" in this catalog for the permissible regenerative power [W] when a regenerative option is used.
4. When using the dynamic brake, refer to "MR-J5 User's Manual" for the permissible load to motor inertia ratio and the permissible load to mass ratio.
5. The test pulse is a signal for the external circuit to perform self-diagnosis by turning off the signals to the servo amplifier instantaneously at regular intervals.
6. This value is applicable when a 3-phase power supply is used.
7. When a 1-phase 200 V AC to 240 V AC power supply is used, use the servo amplifiers at 75 % or less of the effective load ratio.
8. For a connection example of power supply circuit with DC input, refer to "MR-J5 User's Manual".
9. The safety level depends on the setting value of [Pr. PF18 STO diagnosis error detection time] and whether or not STO input diagnosis is performed by TOFB output. Refer to "MR-J5 User's Manual" for details.
10. When the servo amplifiers are closely mounted, keep the ambient temperature within 0 °C to 45 °C, or use the servo amplifiers at 75 % or less of the effective load ratio.

4 Rotary Servo Motors

* Refer to p. 7-55 in this catalog for conversion of units.

Rotary Servo Motors

Model Designation [Note 3, 4]

H K - K T 0 5 3 4 U W B

Symbol	Shaft shape
None	Standard (Straight shaft)
D	D-cut shaft [Note 2]
K	Key shaft (with a double round-ended key) [Note 2]
N	Key shaft (without key) [Note 2]

Symbol	Oil seal [Note 1]
None	None
J	Installed

Symbol	Electromagnetic brake
None	None
B	Installed

Symbol	Structure
None	Standard
U	Flat type
A	Long type (Small flange type)

Symbol	Symbol	Motor type
None	W	HK-KT_W HK-ST_W
4	W	HK-KT_4_W HK-ST_4_W

Symbol	Rated speed [r/min]
2	2000
3	3000

Symbol	Rated output [kW]
05	0.05
1	0.1
1M	0.15
2	0.2
4	0.4
5	0.5
6	0.6
7M	0.75
10	1.0
15	1.5
17	1.75
20	2.0
30	3.0
35	3.5
50	5.0

Symbol	Inertia/capacity
HK-KT	Low inertia, small capacity
HK-ST	Medium inertia, medium capacity

Notes: 1. Dimensions are the same regardless of whether or not an oil seal is installed.
2. Refer to the special shaft dimensions of each series in this catalog for the available models.
3. Contact your local sales office for geared servo motors.
4. This section describes what each symbol in a model name indicates. Some combinations of symbols are not available.

HK-KT_W (Low Inertia, Small Capacity)

Specifications when connected with a 200 V servo amplifier

Flange size		[mm]	40 × 40			60 × 60			
Rotary servo motor model		HK-KT	053W	13W	1M3W	13UW	23W	43W	63W
Continuous running duty (Note 4)	Rated output	[kW]	0.05	0.1	0.15	0.1	0.2	0.4	0.6
	Rated torque (Note 5)	[N·m]	0.16	0.32	0.48	0.32	0.64	1.3	1.9
Maximum torque (Note 3)		[N·m]	0.56 (0.72)	1.1 (1.4)	1.7 (2.1)	1.1 (1.4)	2.2 (2.9)	4.5 (5.7)	6.7 (8.6)
Rated speed (Note 4)		[r/min]	3000						
Maximum speed (Note 4)		[r/min]	6700						
Power rate at continuous rated torque	Standard	[kW/s]	6.4	14.8	23.3	8.4	19.4	39.5	61.0
	With electromagnetic brake	[kW/s]	5.8	14.0	22.4	6.6	16.0	36.7	58.0
Rated current		[A]	1.3	1.2	1.2	1.1	1.4	2.6	4.5
Maximum current (Note 3)		[A]	4.6 (6.2)	4.6 (6.0)	4.5 (6.0)	4.6 (6.0)	5.4 (7.1)	9.8 (14)	19 (25)
Moment of inertia J	Standard	[× 10⁻⁴ kg·m²]	0.0394	0.0686	0.0977	0.121	0.209	0.410	0.598
	With electromagnetic brake	[× 10⁻⁴ kg·m²]	0.0434	0.0725	0.102	0.153	0.254	0.442	0.629
Recommended load to motor inertia ratio (Note 1)			20 times or less (Note 9)			20 times or less	10 times or less (Note 9)	23 times or less (Note 8)	23 times or less	25 times or less
Speed/position detector			Batteryless absolute/incremental 26-bit encoder (resolution: 67,108,864 pulses/rev)						
Oil seal			None (Servo motors with an oil seal are available. (HK-KT_J)) (Note 6)						
Electromagnetic brake			None (Servo motors with an electromagnetic brake are available. (HK-KT_B))						
Thermistor			None						
Insulation class			155 (F)						
Structure			Totally enclosed, natural cooling (IP rating: IP67) (Note 2, 7)						
Vibration resistance *1			X: 49 m/s² Y: 49 m/s²						
Vibration rank			V10 *3						
Permissible load for the shaft *2	L	[mm]	25				30		
	Radial	[N]	88				245		
	Thrust	[N]	59				98		
Mass	Standard	[kg]	0.27	0.37	0.47	0.57	0.77	1.2	1.5
	With electromagnetic brake	[kg]	0.53	0.63	0.73	0.99	1.2	1.6	1.9

Notes: 1. Contact your local sales office if the load to motor inertia ratio exceeds the value in the table.
2. The shaft-through portion is excluded. Refer to asterisk 4 of "Annotations for Rotary Servo Motor Specifications" on p. 4-20 in this catalog for the shaft-through portion.
3. The value in brackets is applicable when the torque is increased with a combination with a larger-capacity servo amplifier. Refer to "Combinations of Rotary Servo Motors and Servo Amplifiers" in this catalog for the available combinations.
4. The continuous running duty and the speed are not guaranteed when the power supply voltage is dropped.
5. When unbalanced torque is generated, such as in a vertical lift machine, keep the unbalanced torque of the machine under 70 % of the servo motor rated torque.
6. For the HK-KT053W with an oil seal, use 80 % of the rated output.
7. When IP67 cables are required, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION. (Email: osb.webmaster@ melsc.jp)
8. 28 times or less for 6000 r/min or less.
9. When the servo motor is combined with a 100 W servo amplifier, the recommended load to motor inertia ratio is for operating the servo motor at the rated speed.
   If operating the servo motor at a speed exceeding the rated speed, check the need for a regenerative option with the drive system sizing software Motorizer. A servo amplifier with a larger capacity can be combined.

Refer to "Annotations for Rotary Servo Motor Specifications" on p. 4-20 in this catalog for details about asterisks 1 to 3.

Electromagnetic brake specifications (Note 1)

Model		HK-KT	053WB	13WB	1M3WB	13UWB	23WB	43WB	63WB
Type			Spring actuated type safety brake						
Rated voltage			24 V DC ₋₁₀⁰%						
Power consumption	[W] at 20 °C		6.4				7.9		
Electromagnetic brake static friction torque		[N·m]	0.48 or higher				1.9 or higher		
Permissible braking work	Per braking	[J]	5.6				22		
	Per hour	[J]	56				220		
Electromagnetic brake life (Note 2)	Number of braking times		20000						
	Work per braking	[J]	5.6				22		

Notes: 1. The electromagnetic brake is for holding. It cannot be used for deceleration applications.
2. Brake gap is not adjustable. Electromagnetic brake life is defined as the time period until readjustment is needed.

Maximum current (Note 3)		[A]	11 (19)	18 (24)	32	34 (42)	34	32 (45)	52
Moment of inertia J	Standard	[× 10⁻⁴ kg·m²]	5.90	8.65	11.4	16.9	22.4	36.4	53.6
	With electromagnetic brake	[× 10⁻⁴ kg·m²]	8.15	10.9	13.7	19.1	24.5	41.4	58.6
Recommended load to motor inertia ratio (Note 1)			15 times or less (Note 6)	23 times or less	24 times or less			15 times or less (Note 7)	12 times or less (Note 8)
Speed/position detector			Batteryless absolute/incremental 26-bit encoder (resolution: 67,108,864 pulses/rev)						
Oil seal			None (Servo motors with an oil seal are available. (HK-ST_J))						
Electromagnetic brake			None (Servo motors with an electromagnetic brake are available. (HK-ST_B))						
Thermistor			None						
Insulation class			155 (F)						
Structure			Totally enclosed, natural cooling (IP rating: IP67) (Note 2)						
Vibration resistance *1			X: 24.5 m/s² Y: 49 m/s²						
Vibration rank			V10 *3						
Permissible load for the shaft *2	L	[mm]	55					79	
	Radial	[N]	980					2058	
	Thrust	[N]	490					980	
Mass	Standard	[kg]	4.3	5.2	6.2	8.0	9.8	12	15
	With electromagnetic brake	[kg]	6.0	6.9	7.8	10	12	17	20

Notes:
1. Contact your local sales office if the load to motor inertia ratio exceeds the value in the table.
2. The shaft-through portion is excluded. Refer to asterisk 4 of "Annotations for Rotary Servo Motor Specifications" on p. 4-20 in this catalog for the shaft-through portion.
3. The value in brackets is applicable when the torque is increased with a combination with a larger-capacity servo amplifier. Refer to "Combinations of Rotary Servo Motors and Servo Amplifiers" in this catalog for the available combinations.
4. The continuous running duty and the speed are not guaranteed when the power supply voltage is dropped.
5. When unbalanced torque is generated, such as in a vertical lift machine, keep the unbalanced torque of the machine under 70 % of the servo motor rated torque.
6. 19 times or less for 3000 r/min or less.
7. 20 times or less for 3000 r/min or less.
8. 22 times or less for 3000 r/min or less.

Refer to "Annotations for Rotary Servo Motor Specifications" on p. 4-20 in this catalog for details about asterisks 1 to 3.

Electromagnetic brake specifications (Note 1)

Model		HK-ST	52WB	102WB	172WB	202AWB	302WB	202WB	352WB
Type			Spring actuated type safety brake						
Rated voltage			24 V DC ₋₁₀⁰%						
Power consumption	[W] at 20 °C		20			23		34	
Electromagnetic brake static friction torque	[N·m]		8.5 or higher			16 or higher		44 or higher	
Permissible braking work	Per braking	[J]	400			400		4500	
	Per hour	[J]	4000			4000		45000	
Electromagnetic brake life (Note 2)	Number of braking times		20000			5000		20000	
	Work per braking	[J]	200			400		1000	

Notes:
1. The electromagnetic brake is for holding. It cannot be used for deceleration applications.
2. Brake gap is not adjustable. Electromagnetic brake life is defined as the time period until readjustment is needed.

Notes: 1. The power supply capacity varies depending on the power supply impedance.
2. The listed values are the power supply capacity for one servo motor. For the multi-axis servo amplifiers, calculate the power supply capacity with the equation below:
Power supply capacity [kVA] = Sum of power supply capacity [kVA] of the connected servo motors

Rotary Servo Motors

Annotations for Rotary Servo Motor Specifications

*1. The vibration direction is shown in the diagram below. The numerical value indicates the maximum value of the component (commonly the bracket in the opposite direction of the load side).
Fretting tends to occur on the bearing when the servo motor stops. Thus, maintain vibration level at approximately one-half of the allowable value.
*2. Refer to the diagram below for the permissible load for the shaft. Ensure that loads applied on the shaft do not exceed the values specified in the table. The values in the table are applicable when each load is applied singly.

L: Distance between the flange mounting surface and the center of load
*3. V10 indicates that the amplitude of the servo motor itself is 10 μm or less. The following shows mounting orientation and measuring position of the servo motor during the measurement:
*4. Refer to the diagram below for the shaft-through portion.

5 Linear Servo Motors

* Refer to p. 7-55 in this catalog for conversion of units.
* MR-J5-G-RJ and MR-J5-A-RJ are planned for a future release.

Linear Servo Motors

LM-U2 Series Specifications

Linear servo motor model Primary side (coil) LM-U2	PAB-05M-0SS0	PAD-10M-0SS0	PAF-15M-0SS0	PBB-07M-1SS0	PBD-15M-1SS0	PBF-22M-1SS0	P2B-40M-2SS0	P2C-60M-2SS0
Linear servo motor model Secondary side (magnet) LM-U2	SA0-240-0SS0 SA0-300-0SS0 SA0-420-0SS0			SB0-240-1SS1 SB0-300-1SS1 SB0-420-1SS1			S20-300-2SS1 S20-480-2SS1	
Cooling method	Natural cooling							
Thrust — Continuous (Note 2) [N]	50	100	150	75	150	225	400	600
Thrust — Maximum [N]	150	300	450	225	450	675	1600	2400
Maximum speed (Note 1) [m/s]	2.0							
Magnetic attraction force [N]	0							
Rated current [A]	0.9	1.9	2.7	1.5	3.0	4.6	6.6	9.8
Maximum current [A]	2.7	5.5	8.3	4.5	8.9	13.7	26.7	40.3
Recommended load to motor mass ratio	Maximum of 30 times the mass of the linear servo motor primary side							
Thermistor	Built-in							
Insulation class	155 (F)							
Structure	Open (IP rating: IP00)							
Vibration resistance	49 m/s^2							
Mass — Primary side (coil) [kg]	0.3	0.6	0.8	0.4	0.8	1.1	2.9	4.2
Mass — Secondary side (magnet) [kg]	240 mm/pc: 2.0 300 mm/pc: 2.5 420 mm/pc: 3.5			240 mm/pc: 2.6 300 mm/pc: 3.2 420 mm/pc: 4.5			300 mm/pc: 9.6 480 mm/pc: 15.3	

Notes: 1. The maximum speed of the linear servo motor or the rated speed of the linear encoder, whichever is smaller, is the upper limit of the linear servo motor speed.
2. Use the linear servo motor at 70 % or less of the effective load ratio when it is in the servo lock state or in a small reciprocating motion.

	LM-U2P2C-60M-2SS0	MR-J5-350G, MR-J5-350A	5.5

Notes: 1. The power supply capacity varies depending on the power supply impedance.
2. The listed values are the power supply capacity for one servo motor. For the multi-axis servo amplifiers, calculate the power supply capacity with the equation below:
Power supply capacity [kVA] = Sum of power supply capacity [kVA] of the connected servo motors

			LIP 6081 + EIB 392M (/4096)			1440 mm	
		Nidec Sankyo Corporation	PSLH041	0.1 μm	5.0 m/s	2400 mm	Two-wire type
A/B/Z-phase differential output type [Note 4, 6]		Not designated	-	0.001 μm to 5 μm [Note 5]	Depends on the linear encoder	Depends on the linear encoder	A/B/Z-phase differential output method

Notes: 1. Contact the relevant linear encoder manufacturer for details on operating environment and specifications of the linear encoder such as ambient temperature, vibration resistance and IP rating.
2. The listed values are the manufacturer's specifications. When combined with MELSERVO-J5 Series servo amplifiers, the specification is the lower value of either the listed value or the servo motor rated speed.
3. The listed values are the manufacturer's specifications. The maximum length of the encoder cable between linear encoder and servo amplifier is 30 m.
4. When using the A/B/Z-phase differential output type linear encoder, use MR-J5-G-RJ/MR-J5-A-RJ servo amplifier.
5. Select the linear encoder within this range.
6. The phase difference of the A-phase pulse and the B-phase pulse, and the width of the Z-phase pulse must be 200 ns or wider. The output pulse of A-phase and B-phase of the A/B/Z-phase differential output linear encoder is in the multiply-by-four count method. Homing is not possible with a linear encoder without Z-phase.

LA
LAR
LB — Phase difference: 200 ns or wider
LBR
LZ — One pulse of Z-phase: 200 ns or wider
LZR

Direct Drive Motors

TM-RG2M/TM-RU2M Series Specifications

Direct drive motor model	TM-RG2M- TM-RU2M-	002C30	004E30	009G30
Motor outer diameter (frame dimensions)	[mm]	ø130	ø180	ø230
Continuous running duty — Rated output (Note 4)	[W]	69	141 (188)	283
Continuous running duty — Rated torque (Note 3, 4)	[N•m]	2.2	4.5 (6)	9
Maximum torque (Note 4)	[N•m]	8.8	13.5 (18)	27
Rated speed	[r/min]	300		
Maximum speed	[r/min]	600		
Permissible instantaneous speed	[r/min]	690		
Power rate at continuous rated torque (Note 4)	[kW/s]	6.1	3.4 (6.0)	5.5
Rated current (Note 4)	[A]	1.2	1.3 (1.7)	2.2
Maximum current (Note 4)	[A]	4.9	4.0 (5.3)	6.7
Moment of inertia J	[$\times 10^{-4}$ kg•m^2]	7.88	60.2	147
Recommended load to motor inertia ratio (Note 1)		50 times or less	20 times or less	
Absolute accuracy (Note 5)	[s]	±15	±12.5	
Speed/position detector — Absolute/incremental *1		21-bit encoder 2097152 pulses/rev	22-bit encoder 4194304 pulses/rev	
Thermistor		Built-in		
Insulation class		155 (F)		
Structure		Totally enclosed, natural cooling (IP rating: IP40) (Note 2)		
Vibration resistance *2		X: 49 m/s^2 Y: 49 m/s^2		
Vibration rank		V10 *4		
Rotor permissible load *3 — Moment load	[N•m]	15	49	65
Rotor permissible load *3 — Axial load	[N]	770	2300	3800
Mass	[kg]	2.7	5.5	8.3

Notes: 1. Contact your local sales office if the load to motor inertia ratio exceeds the value in the table.
2. Connectors and a gap along the rotor (output shaft) are excluded.
3. When unbalanced torque is generated, such as in a vertical lift machine, be sure to use the absolute position detection system, and keep the unbalanced torque under 70 % of the servo motor rated torque.
4. The value in brackets is applicable when the rated and maximum torques are increased with a combination with a larger-capacity servo amplifier.
Refer to "Combinations of Direct Drive Motors and Servo Amplifiers" in this catalog for the combinations.
5. Absolute accuracy varies according to the mounting state of load and the surrounding environment.

Refer to "Annotations for Direct Drive Motor Specifications" on p. 6-11 in this catalog for the details about asterisks 1 to 4.

TM-RG2M/TM-RU2M Series Torque Characteristics

TM-RG2M002C30, TM-RU2M002C30 [Note 1, 2, 3]
TM-RG2M004E30, TM-RU2M004E30 [Note 1, 2, 3]
TM-RG2M004E30, TM-RU2M004E30 [Note 1, 2, 3, 4]
(when torque is increased)
TM-RG2M009G30, TM-RU2M009G30 [Note 1, 2, 3]
Notes: 1. ▬▬▬ : For 3-phase 200 V AC or 1-phase 230 V AC.
2. ----- : For 1-phase 200 V AC.
3. Torque drops when the power supply voltage is below the specified value.
4. This value is applicable when the rated and maximum torques are increased with a combination with a larger-capacity servo amplifier. Refer to "Combinations of Direct Drive Motors and Servo Amplifiers" in this catalog for the combinations.

Mounting of TM-RG2M/TM-RU2M Series

● Flange type (with pilot)
● Table type (with positioning pin holes)
Precautions when mounting the direct drive motor

- Fix the direct drive motor securely on a high-rigid mounting surface because a machine resonance may occur if the rigidity of the mounting surface is low.
- Fix the mounting screws of the direct drive motor and a rotating table securely to ensure enough rigidity.
- To ensure heat dissipation and accuracy, mount the direct drive motor on a high-rigid mounting surface which has enough heat dissipation area without gaps between the bottom of the direct drive motor and the mounting surface.
- The flange type has a higher mounting accuracy than the table type. When a high-mounting accuracy is required, select the flange type.
  Refer to "Direct Drive Motor Machine Accuracy" on p. 6-9 in this catalog for the machine accuracy of each direct drive motor, and refer to the dimensions in this catalog for the dimensional tolerance.

Direct Drive Motors

TM-RFM Series Specifications

Direct drive motor model	TM-RFM	002C20	004C20	006C20	006E20	012E20	018E20

	TM-RFM120J10	MR-J5-350G, MR-J5-350A	3.4

Notes: 1. The power supply capacity varies depending on the power supply impedance.
2. The listed values are the power supply capacity for one servo motor. For the multi-axis servo amplifiers, calculate the power supply capacity with the equation below:
Power supply capacity [kVA] = Sum of power supply capacity [kVA] of the connected servo motors

Annotations for Direct Drive Motor Specifications

*1. Be sure to connect the following options for absolute position detection system.
　・MR-J5-G/MR-J5-A: battery (MR-BAT6V1SET or MR-BAT6V1SET-A) and absolute position storage unit (MR-BTAS01)
　・MR-J5W_: battery case (MR-BT6VCASE), battery (MR-BAT6V1) × 5 pcs, and absolute position storage unit (MR-BTAS01)
　Refer to "MR-J5 User's Manual" for details.
*2. The vibration direction is shown in the diagram below. The numerical value indicates the maximum value of the component.
　Fretting tends to occur on the bearing when the direct drive motor stops. Thus, maintain vibration level at approximately one-half of the allowable value.
*3. The following is calculation examples of axial and moment loads to the rotor (output shaft) of the direct drive motor. The axial and moment loads must be maintained equal to or below the permissible value.

Axial load
= F + Load mass

Axial load
= F + Load mass
Moment load
= F × L

Axial load = Load mass
Moment load = F × (L + A)
Motor outer diameter [mm] (Frame dimensions)	Dimension A [mm]	
	TM-RG2M series TM-RU2M series	TM-RFM series
ø130	20.6	19.1
ø180	20.7	20.2
ø230	18.0	24.4
ø330	-	32.5

*4. V10 indicates that the amplitude of the direct drive motor itself is 10 µm or less. The following shows mounting posture and measuring position of the direct drive motor during the measurement:

* Only MR-J5-G and MR-J5-A are mentioned for the 1-axis servo amplifiers in this section. Note that options necessary for servo amplifiers with special specifications are the same as those for standard servo amplifiers. Refer to the servo amplifiers with the same rated capacity.
* MR-J5-G-RJ and MR-J5-A-RJ are planned for a future release.
* Refer to p. 7-55 in this catalog for conversion of units.

Options/Peripheral Equipment

Introducing MELSERVO Model Selection Tool

Model Selection tool is now available for supporting you to select options such as encoder cables and power cables which are required to use with controllers, servo motors, servo amplifiers, and regenerative options of your choice.
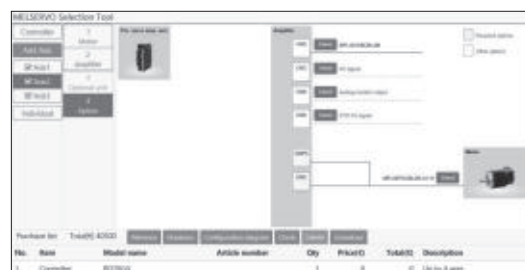

Cable/Connector Selection Table for Servo Motors

Necessary option cables and connectors vary depending on the servo motor series.
Refer to the following tables for necessary options.

Cables for HK-KT servo motors

| Cable type	Cable length	IP rating (Note 1)	Electromagnetic brake wires	Cable direction	Bending life	Model	Reference
Dual cable type	10 m or shorter (direct connection type)	IP65 (Note 3)	Available	In direction of load side	Long bending life	MR-AEPB2CBL_M-A1-H	p. 7-5
					Standard	MR-AEPB2CBL_M-A1-L	
				In opposite direction of load side	Long bending life	MR-AEPB2CBL_M-A2-H	
					Standard	MR-AEPB2CBL_M-A2-L	
			Not available	In direction of load side	Long bending life	MR-AEP2CBL_M-A1-H	
					Standard	MR-AEP2CBL_M-A1-L	
				In opposite direction of load side	Long bending life	MR-AEP2CBL_M-A2-H	
					Standard	MR-AEP2CBL_M-A2-L	
	Over 10 m (junction type) (Note 2)	IP20	Available	In direction of load side	Long bending life	MR-AEPB2J10CBL03M-A1-L, MR-AEKCBL_M-H	p. 7-6
					Standard	MR-AEPB2J10CBL03M-A1-L, MR-AEKCBL_M-L	
				In opposite direction of load side	Long bending life	MR-AEPB2J10CBL03M-A2-L, MR-AEKCBL_M-H

					Standard	MR-AEP1CBL_M-A1-L	
				In opposite direction of load side	Long bending life	MR-AEP1CBL_M-A2-H	
					Standard	MR-AEP1CBL_M-A2-L	

Notes: 1. The IP rating indicated is for the connector's protection against ingress of dust and water when coupled to a servo motor. If the IP rating of the servo motor differs from that of these connectors, overall IP rating depends on the lowest of all.
2. The two types of cables indicated are required.
3. When IP67 cables are required, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION. (Email: osb.webmaster@melsc.jp)

Cable/Connector Selection Table for Servo Motors

Cables for HK-ST servo motors

Application	Compatible servo motor	IP rating (Note 1)	Bending life	Length	Model	Reference
Encoder	HK-ST series	IP67	Long bending life	2 m to 10 m	MR-J3ENSCBL_M-H	p. 7-7
				20 m to 50 m	MR-AENSCBL_M-H	
			Standard	2 m to 10 m	MR-J3ENSCBL_M-L	
				20 m to 30 m	MR-AENSCBL_M-L	

Connectors for HK-ST servo motors

Application	Compatible servo motor	IP rating (Note 1)	Connector shape	Type of connection	Model (Note 2)	Reference
Encoder	HK-ST series	IP67	Straight	One-touch	MR-J3SCNS	p. 7-7
				Screw	MR-ENCNS2	
			Angle	One-touch	MR-J3SCNSA	p. 7-9
				Screw	MR-ENCNS2A	
Power supply	HK-ST52(4)W, 102(4)W, 172(4)W, 202(4)AW, 302(4)W	IP67	Straight	One-touch	MR-APWCNS4	
	HK-ST202(4)W, 352(4)W, 5024W			One-touch	MR-APWCNS5	
Electromagnetic brake	HK-ST series	IP67	Straight	One-touch	MR-BKCNS1	
				Screw	MR-BKCNS2	
			Angle	One-touch	MR-BKCNS1A	
				Screw	MR-BKCNS2A	

Notes: 1. The IP rating indicated is for the connector's protection against ingress of dust and water when coupled to a servo motor. If the IP rating of the servo motor differs from that of these connectors, overall IP rating depends on the lowest of all.
2. Use the option connector set indicated to fabricate a cable.

Options/Peripheral Equipment

Configuration Example for Rotary Servo Motors (Note 3)

Servo motor

HK-ST series

Power connector set

→ To servo amplifier power connector (CNP3/CNP3A/CNP3B/CNP3C)

(36) (37)

Electromagnetic brake connector set

(38) (39)

(40) (41)

Encoder cable

(20) (21) (22) (23)

→ To servo amplifier encoder connector (CN2/CN2A/CN2B/CN2C)

(24) (33)

(34) (35)

Servo motor

Notes: 1. Cables for leading out either in direction of load side or opposite to load side are available.
2. Secure this cable as it does not have a long bending life.
3. Cables drawn with dashed lines need to be fabricated by user. Refer to "Rotary Servo Motor User's Manual" for fabricating the cables.
4. This is for servo motors with an electromagnetic brake.

Cables and Connectors for Rotary Servo Motors

Refer to "Details of Option Connectors for Servo Motors" in this catalog for the detailed models.
Encoder cables are not subject to European Low Voltage Directive (50 V AC to 1000 V AC and 75 V DC to 1500 V DC).

Notes: 1. The IP rating indicated is for the connector's protection against ingress of dust and water when coupled to a servo motor. If the IP rating of the servo motor differs from that of these connectors, overall IP rating depends on the lowest of all.
2. For unlisted lengths of the cables, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION. (Email: osb.webmaster@melsc.jp)
3. When IP67 cables are required, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION. (Email: osb.webmaster@melsc.jp)

Cables and Connectors for Rotary Servo Motors

Refer to "Details of Option Connectors for Servo Motors" in this catalog for the detailed models.

No.	Item	Application	Bending life	Cable length	Model	Description/IP rating (Note 1)
(33)	Encoder connector set (Note 2, 3, 4) (screw type)	For HK-ST (straight type)	-	-	MR-ENCNS2	Encoder connector Servo amplifier connector IP67 Applicable cable Wire size: 0.5 mm² (AWG 20) or smaller Cable OD: 5.5 mm to 9.0 mm
(34)	Encoder connector set (Note 2, 3, 4) (one-touch connection type)	For HK-ST (angle type)	-	-	MR-J3SCNSA	Encoder connector Servo amplifier connector IP67
(35)	Encoder connector set (Note 2, 3, 4) (screw type)	For HK-ST (angle type)	-	-	MR-ENCNS2A	Applicable cable Wire size: 0.5 mm² (AWG 20) or smaller Cable OD: 5.5 mm to 9.0 mm
(36)	Power connector set (Note 4, 5) (one-touch connection type)	HK-ST52(4)W, 102(4)W, 172(4)W, 202(4)AW, 302(4)W	-	-	MR-APWCNS4	Power connector IP67 Applicable cable Wire size: 2 mm² to 3.5 mm² (AWG 14 to 12) Cable OD: 10.5 mm to 14.1 mm
(37)	Power connector set (Note 4, 5) (one-touch connection type)	HK-ST202(4)W, 352(4)W, 5024W	-	-	MR-APWCNS5	Power connector IP67 Applicable cable Wire size: 5.5 mm² to 8 mm² (AWG 10 to 8) Cable OD: 12.5 mm to 16 mm
(38)	Electromagnetic brake connector set (Note 3, 4) (one-touch connection type)	For HK-ST (straight type)	-	-	MR-BKCNS1	Electromagnetic brake connector IP67 Applicable cable Wire size: 1.25 mm² (AWG 16) or smaller Cable OD: 9.0 mm to 11.6 mm
(39)	Electromagnetic brake connector set (Note 3, 4) (screw type)		-	-	MR-BKCNS2	
(40)	Electromagnetic brake connector set (Note 3, 4) (one-touch connection type)	For HK-ST (angle type)	-	-	MR-BKCNS1A	Electromagnetic brake connector IP67 Applicable cable Wire size: 1.25 mm² (AWG 16) or smaller Cable OD: 9.0 mm to 11.6 mm
(41)	Electromagnetic brake connector set (Note 3, 4) (screw type)		-	-	MR-BKCNS2A	

Notes: 1. The IP rating indicated is for the connector's protection against ingress of dust and water when coupled to a servo motor. If the IP rating of the servo motor differs from that of these connectors, overall IP rating depends on the lowest of all.
2. Cable clamps and bushings for cable OD of 5.5 mm to 7.5 mm and of 7.0 mm to 9.0 mm are included in the set.
3. The connector set contains a plug and contacts. Using contacts for other plugs may damage the connector. Use the enclosed contacts.
4. For fabricating cables with these connectors, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION.
(Email: osb.webmaster@melsc.jp)
5. When the screw type is required, refer to "Products on the Market for Rotary Servo Motors" in this catalog.

Products on the Market for Rotary Servo Motors
Contact the relevant manufacturers directly.
When fabricating a cable with the following connectors, refer to the relevant manufacturers' instruction manuals for wiring and assembling procedures.

Encoder connector (servo amplifier side)

Application	Connector (3M)
Servo amplifier CN2 connector	Receptacle: 36210-0100PL Shell kit: 36310-3200-008
	Connector (Molex, LLC)
	54599-1019 (gray)
	54599-1016 (black)

Connector for HK-KT series (for dual cable type) `Rotary`

Applicable servo motor	Feature (Note 1)	Connector set (Hirose Electric Co., Ltd.)	Contact (Hirose Electric Co., Ltd.)	Applicable cable example
HK-KT	IP67	MT50W-8D/ 2D4ES-CVLD(7.5)	For power supply: MT50E-1820SCFA For signal: MT50D-2224SCFA	Refer to "Rotary Servo Motor User's Manual" for the applicable cables.

Connector for HK-KT series (for single cable type) `Rotary`

Applicable servo motor	Feature (Note 1)	Connector set (Hirose Electric Co., Ltd.)	Contact (Hirose Electric Co., Ltd.)	Applicable cable example
HK-KT	IP67	MT50W-8D/ 2D4ES-CV(11.9)	For power supply: MT50E-1820SCFA For signal: MT50D-2224SCFA	Refer to "Rotary Servo Motor User's Manual" for the applicable cables.

Straight type   Angle type

Encoder connector for HK-ST series `Rotary`

Applicable servo motor	Feature (Note 1)	Connector (DDK Ltd.)				Applicable cable example
		Type	Type of connection	Plug	Socket contact	Cable OD [mm]
HK-ST	IP67	Straight	One-touch connection type	CMV1-SP10S-M1	Select a solder or press bonding type. (Refer to the table below.)	5.5 to 7.5
				CMV1-SP10S-M2		7.0 to 9.0
			Screw type	CMV1S-SP10S-M1		5.5 to 7.5
				CMV1S-SP10S-M2		7.0 to 9.0
		Angle	One-touch connection type	CMV1-AP10S-M1		5.5 to 7.5
				CMV1-AP10S-M2		7.0 to 9.0
			Screw type	CMV1S-AP10S-M1		5.5 to 7.5
				CMV1S-AP10S-M2		7.0 to 9.0

| Contact	Socket contact (DDK Ltd.)	Wire size (Note 2)
Solder type	CMV1-#22ASC-S1-100	0.5 mm^2 (AWG 20) or smaller
Press bonding type	CMV1-#22ASC-C1-100	0.2 mm^2 to 0.5 mm^2 (AWG 24 to 20) Crimping tool (357J-53162T) is required.
	CMV1-#22ASC-C2-100	0.08 mm^2 to 0.2 mm^2 (AWG 28 to 24) Crimping tool (357J-53163T) is required.

Notes: 1. The IP rating indicated is for the connector's protection against ingress of dust and water when coupled to a servo motor. If the IP rating of the servo motor differs from that of these connectors, overall IP rating depends on the lowest of all.
2. The wire size shows wiring specifications of the connector.

Ethernet Cable Specifications ^(Note 1, 2)

Item		Description
Ethernet Cable		Category 5e or higher, (double shielded/STP) straight cable
	Standard	The cable must meet the following: • IEEE802.3 (1000BASE-T) • ANSI/TIA/EIA-568-B (Category 5e)
	Connector	RJ-45 connector with shield

Notes: 1. Use wiring parts recommended by CC-Link Partner Association for wiring the CC-Link IE TSN.
2. Cables for CC-Link IE Controller Network cannot be used with CC-Link IE TSN.

[Products on the Market]
Ethernet Cable

Item		Model	Specifications	
Ethernet Cable	For indoor	SC-E5EW-S_M	_: cable length (100 m max., unit of 1 m)	Double shielded cable (Category 5e)
	For indoor and moving part	SC-E5EW-S_M-MV	_: cable length (45 m max., unit of 1 m)	
	For indoor/outdoor	SC-E5EW-S_M-L	_: cable length (100 m max., unit of 1 m)	

For details, please contact Mitsubishi Electric System & Service Co., Ltd. OVERSEAS SERVICE SECTION. (Email: osb.webmaster@melsc.jp)

* Refer to the website of CC-Link Partner Association for cables on the market other than above.

Mitsubishi Electric Engineering

Drive Goods Junction Terminal Block with Brake Contact Output

Features

■ **This is a junction terminal block with a built-in brake sequence circuit recommended for the MR-J5-G servo amplifier.**

■ **The DG2BK1TB junction terminal block with brake contact output reduces the brake sequence circuit installation space.**

Connection with servo amplifier

Notes: 1. This junction terminal block cannot be used when LA, LB, LZ, MO1, and MO2 signals from the CN3 connector of the servo amplifier are used.
2. The DG2BK1TB cannot be connected to the MR-J5W2-G and the MR-J5W3-G.
3. 24 V DC power supplies for control signals and a servo motor electromagnetic brake are required separately.
4. Use the DG2BK1TB at an altitude of 1000 m or less.
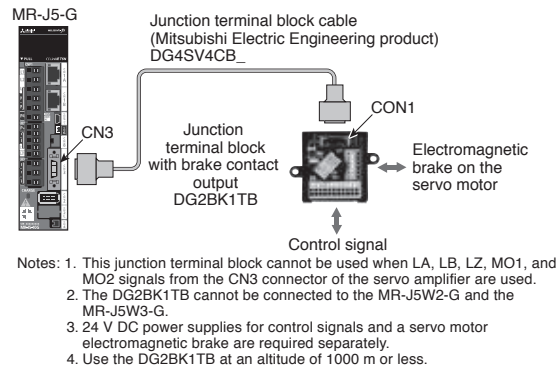

Dimensions

■ **DG2BK1TB, DG2BK1TB-P01**

[Unit: mm]

Notes: 1. The DG2BK1TB-D and the DG2BK1TB-P01-D are without mounting tabs.
Product models

Item	Model
Junction terminal block with brake contact output (sink type)	DG2BK1TB
Junction terminal block with brake contact output dedicated for DIN rail mounting (sink type)	DG2BK1TB-D
Junction terminal block with brake contact output (source type)	DG2BK1TB-P01
Junction terminal block with brake contact output dedicated for DIN rail mounting (source type)	DG2BK1TB-P01-D

### Drive Goods Mechanical Signal Terminal Block

Features

■ **The terminal blocks are designed specifically for the FLS/RLS and DOG of mechanical installation signals, downsizing the footprints.**

■ **Sensor leads are directly connectable to the terminal block for mechanical installation.**

Implementation example
Dimensions

■ **DG2SV2TB (for one axis)**

		Long bending life	DG4SV2CB50H-P01 (length: 5 m)
			DG4SV2CB100H-P01 (length: 10 m)

Connection cables for a multi-axis system are also available.

Drive Goods Junction Terminal Block for General-Purpose Interface Servo Amplifier

Features

■ **With this junction terminal block for general-purpose interface servo amplifier, the footprint is approximately 50 % smaller than the screw type terminal block.**

■ **Thanks to the spring clamp terminal block, tightening screws is not required. Retightening the screws at a regular inspection is not necessary because of no screw looseness due to vibration.**

Dimensions

Notes: 1. Cool the unit forcibly with a cooling fan (92 mm × 92 mm, minimum air flow: 1.0 m³/min). The cooling fan must be prepared by users.
2. The power values in this table are resistor-generated powers, not rated powers.

* Precautions when connecting the regenerative option

1. The regenerative option causes a temperature rise of 100 °C or higher relative to the ambient temperature. Fully examine heat dissipation, installation position, wires used before installing the unit. Use flame-retardant wires or apply flame retardant on wires, and keep the wires clear of the unit.
2. Use twisted wires for connecting the regenerative option to the servo amplifier, and keep the wire length to a maximum of 5 m.
3. Use twisted wires for connecting a thermal sensor so that the sensor does not fail to work properly because of inducted noise.

Notes:
1. Create a sequence circuit that turns off the magnetic contactor when abnormal overheating occurs.
2. When using MR-RB50 or MR-RB5N, cool the unit forcibly with a cooling fan (92 mm × 92 mm, minimum air flow: 1.0 m³/min). The cooling fan must be prepared by users.
3. When MR-RB30, MR-RB3N, or MR-RB34 is used, it may be necessary to cool the unit forcibly with a cooling fan (92 mm × 92 mm, minimum air flow: 1.0 m³/min), depending on the operating environment.
Refer to "MR-J5 User's Manual" for details. The cooling fan must be prepared by user.
4. G3 and G4 terminals are thermal sensor. G3-G4 opens when the regenerative option overheats abnormally.
Options/Peripheral Equipment

Simple Converter (MR-CM)

`G` `G-RJ` `WG` `A` `A-RJ`

Specifications

| Simple converter unit model				MR-CM3K
Converter output	Rated voltage			270 V DC to 324 V DC
	Rated current	3-phase power supply input	[A]	20
Main circuit power supply input	Voltage/frequency			3-phase 200 V AC to 240 V AC, 50 Hz/60 Hz
	Rated current	3-phase power supply input	[A]	16
	Permissible voltage fluctuation			3-phase 170 V AC to 264 V AC
Overheat detection function	Thermal sensor			The contact between TH1 and TH2 opens when the thermal sensor detects an overheat condition.
	Contact specification	Maximum voltage		110 V AC/DC
		Maximum current		0.3 A at 20 V DC
		Minimum current		0.1 mA at 1 V DC
		Maximum capacity		6 VA
Compatible servo amplifier				MR-J5-10G/A to MR-J5-200G/A, MR-J5W2-22G to MR-J5W2-1010G, MR-J5W3-222G, MR-J5W3-444G
Maximum number of connectable servo amplifiers				6 units
Total capacity of servo amplifiers to be driven			[kW]	3
Continuous rating			[kW]	3
Instantaneous maximum rating			[kW]	9
Structure (IP rating)				IP20
Close mounting				Possible
Environment				The operating environment is the same as that of the servo amplifiers. Refer to "1. Common Specifications" in this catalog.

Simple Converter (MR-CM)

| G | G-RJ | WG | A | A-RJ |

Connection example
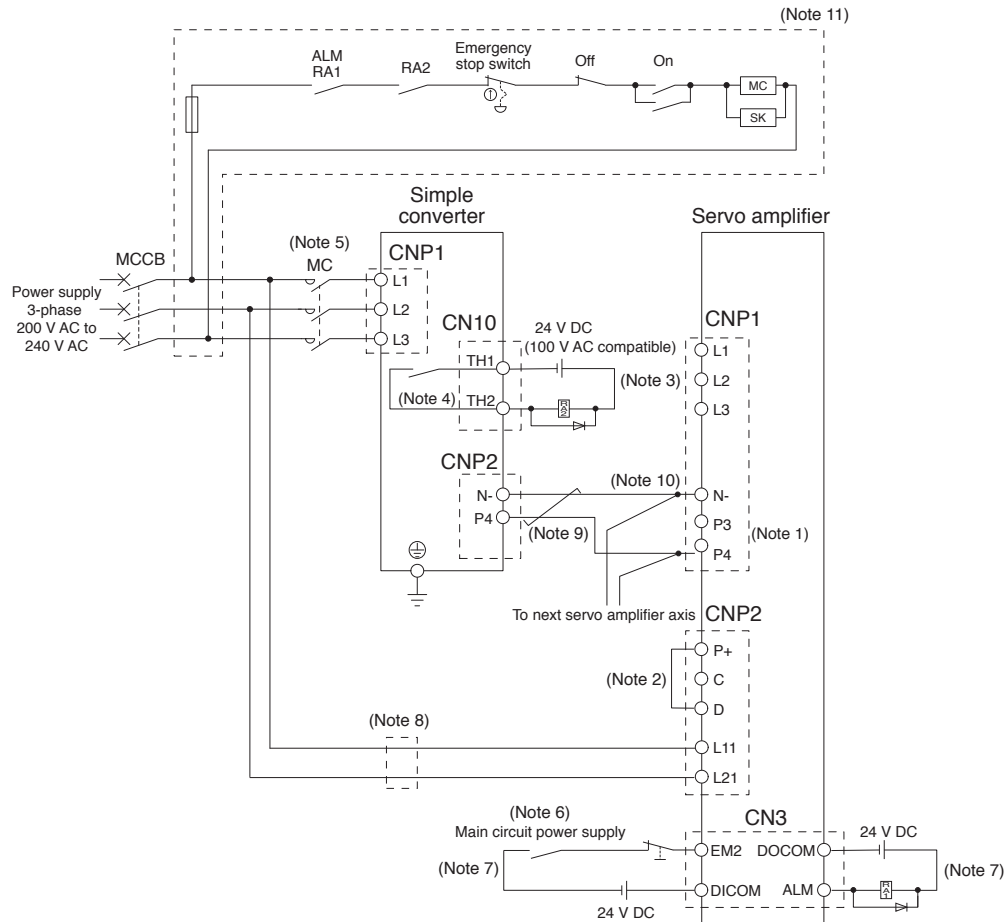

Notes:
1. Connect a simple converter and a servo amplifier after disconnecting the short-circuit bar between P3 and P4.
2. Connect P+ and D.
3. Do not wire L1/L2/L3 of the servo amplifier when using the simple converter.
4. The contact between TH1 and TH2 opens when the thermal sensor detects an overheat condition.
5. Use a magnetic contactor with an operation delay time of 80 ms or less. The operation delay time is the time interval from current being applied to the coil until closure of contacts.
6. To prevent an unexpected restart of the servo amplifier, create a circuit to turn off EM2 (Forced stop 2) when the main circuit power is turned off.
7. Stop commands from the controller as soon as the main circuit power supply is turned off when an alarm occurs even in one servo amplifier. The following are example methods to turn off the main circuit power supply: Configure a circuit with an I/O module, or connect relays for alarm output corresponding to each servo amplifier to the coil-side of the magnetic contactor in series.
8. Install an overcurrent protection device (molded-case circuit breaker, fuse, etc.) to protect the branch circuit.
9. Twist or bundle the wires between the simple converter and the servo amplifier with cable ties to keep the two wires close to each other. Keep the total wiring length between the simple converter and each servo amplifier 5 m or shorter.
10. The following ferrule is also usable to branch off the wirings (for two wires: AI-TWIN2×1.5-10BK).
11. To turn on/off the main circuit power supply by a DC power supply, wire the circuit as follows. Do not use the 24 V DC interface power supply for the magnetic contactor. Provide a dedicated power supply to the magnetic contactor.

Options/Peripheral Equipment
Battery

`G` `G-RJ` `A` `A-RJ`

Use the battery to configure an absolute position detection system with a direct drive motor. The absolute position data can be retained when the battery is mounted on the servo amplifier. The battery is not required for rotary servo motors and linear servo motors. When the battery life runs out, please replace the built-in MR-BAT6V1 battery. Refer to "MR-J5 User's Manual" for installation of the battery.
MR-BAT6V1SET   MR-BAT6V1SET-A
Model	MR-BAT6V1SET/MR-BAT6V1SET-A
Nominal voltage [V]	6
Nominal capacity [mAh]	1650
Lithium content [g]	1.2
Primary battery	2CR17335A (CR17335A × 2 pcs. in series)
Mass [g]	55

* MR-J3BAT battery cannot be used because of the difference in voltage.
* MR-BAT6V1 is an assembled battery composed of lithium metal batteries of CR17335A. This battery is not subject to the dangerous goods (Class 9) of the UN Recommendations.
  To transport lithium metal batteries and lithium metal batteries contained in equipment, take actions to comply with the following regulations: the United Nations Recommendations on the Transport of Dangerous Goods, the Technical Instruction (ICAO-TI) by the International Civil Aviation Organization (ICAO), and the International Maritime Dangerous Goods Code (IMDG Code) by the International Maritime Organization (IMO). To transport the batteries, check the latest standards or the laws of the destination country and take actions. Contact your local sales office for more details.

Battery Case (MR-BT6VCASE) and
Battery (MR-BAT6V1)

Absolute position data of up to four axes of direct drive motors can be retained when the battery case and the batteries are used. Direct drive motors used in incremental systems are also included in the number of the connectable axes. The battery cases and batteries can be used in systems including single-axis servo amplifiers and multi-axis servo amplifiers.
The case stores five batteries by connecting to the connectors. The batteries are not included in the battery case. Please purchase the batteries separately.

Altitude	2000 m or less
Vibration resistance	When the surface A is mounted: 49 m/s^2 (directions of X, Y, and Z axes) When the surface B is mounted: 5.9 m/s^2 (directions of X, Y, and Z axes)

Notes: 1. When mounting the absolute position storage unit outside a cabinet, mount the surface A with four screws. When mounting the unit inside a cabinet, mounting the surface B with two screws is also possible.

Replacement Fan Unit (MR-J5-FAN)

The cooling fan of the servo amplifier has a fan and a fan cover as a unit. Replace the fan unit when the fan needs to be replaced. Refer to "MR-J5 User's Manual" for replacement of the cooling fan.

Servo amplifier model	Replacement fan unit model
MR-J5-70G/A MR-J5-100G/A	MR-J5-FAN1
MR-J5-200G/A MR-J5-350G/A	MR-J5-FAN2
MR-J5W2-44G	MR-J5W-FAN1
MR-J5W2-77G MR-J5W2-1010G	MR-J5W-FAN3
MR-J5W3-222G MR-J5W3-444G	MR-J5W-FAN2

[Products on the Market]
Junction Terminal Block (PS7DW-20V14B-F)

This terminal block is used for wiring signals.

External appearance
Toho Technology Corp.
Kyoto Factory

Applicable wire: 1.25 mm² maximum

[Products on the Market]
Junction Terminal Block (DG2SV3TB), Servo Amplifier Connection Cable (DG4SV2CB_)   G   G-RJ

This terminal block is used for wiring signals.

Dimensions   [Unit: mm]

40

55

Mitsubishi Electric Engineering Co., Ltd.

Applicable wire: 1.5 mm² maximum
(Wire insulator OD: ø2.8 mm or smaller)

Options/Peripheral Equipment

Junction Terminal Block (MR-TB26A)

This terminal block is used for wiring signals.

Dimensions (Note 1) [Unit: mm]
Specifications

Rating		32 V AC/DC, 0.5 A
Applicable wire (terminal side)	Stranded wire	0.08 mm² to 1.5 mm² (AWG 28 to 14)
	Solid wire	ø0.32 mm to 1.2 mm
	Wire insulator OD	3.4 mm or smaller
Operating tool		210-619 (WAGO) or an equivalent 210-119SB (WAGO) or an equivalent
Stripped length of wire		5 mm to 6 mm

Notes: 1. The lengths in brackets are applicable when the junction terminal block is mounted on a 35 mm wide DIN rail.

Junction Terminal Block (MR-TB50)

This terminal block is used for wiring signals.

Dimensions [Unit: mm]
Terminal screw size: M3.5
Applicable wire: 2 mm² maximum
Crimp terminal width: 7.2 mm or shorter
Mounting screw size: M4

[Products on the Market]
Junction Terminal Block (DG2SV1TB), Servo Amplifier Connection Cable (DG4SV1CB_)
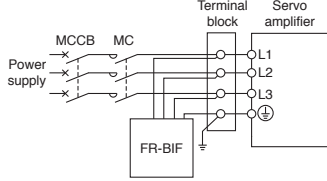

This terminal block is used for wiring signals.

Dimensions [Unit: mm]

Mitsubishi Electric Engineering Co., Ltd.

Applicable wire: 1.5 mm² maximum (Wire insulator OD: ø2.8 mm or smaller)
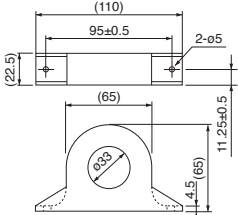

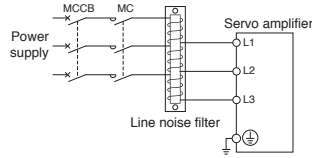

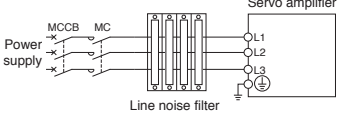

Radio Noise Filter (FR-BIF)

This filter suppresses noise from the power supply side of the servo amplifier, especially effective for the radio frequency bands of 10 MHz or lower. The FR-BIF is designed to be installed on the input side.

Dimensions [Unit: mm]	Connections

Connections:
Do not use the FR-BIF on the output side of the servo amplifier.
Wiring should be as short as possible. Grounding is required.
Insulate the unused wire when using the FR-BIF with a 1-phase power supply.

Line Noise Filter (FR-BSF01)

This filter is effective in suppressing radio noise emitted from the power supply side or the output side of the servo amplifier, and also in suppressing high-frequency leakage current (zero-phase current), especially within 0.5 MHz to 5 MHz band.

Dimensions [Unit: mm]	Connections

FR-BSF01
 For wire size of 3.5 mm² (AWG 12) or smaller

The line noise filters can be mounted on lines of the main circuit power supply (L1, L2, and L3) and of the servo motor power (U, V, and W). Pass each of the wires through the line noise filter an equal number of times in the same direction.
For wires of the main circuit power supply, the effect of the filter rises as the number of passes increases, but generally four passes would be appropriate. For the servo motor power lines, passes must be four times or less. Do not pass the grounding wire through the filter. Otherwise, the effect of the filter will drop.
Wind the wires by passing through the filter to satisfy the required number of passes as shown in Example 1. If the wires are too thick to wind, use two or more filters to have the required number of passes as shown in Example 2.
Place the line noise filters as close to the servo amplifier as possible for their best performance.
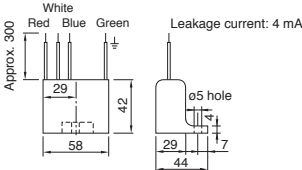

Example 1   Example 2

Data Line Filter

This filter is effective in preventing noise when attached to the pulse output cable of the pulse train output controller or the motor encoder cable.
Example) ESD-SR-250 (manufactured by TOKIN Corporation)
           ZCAT3035-1330 (manufactured by TDK)
           GRFC-13 (manufactured by Kitagawa Industries Co., Ltd.)
           E04SRM563218 (manufactured by Seiwa Electric Mfg. Co. Ltd.)

Surge Killer

Attach surge killers to AC relays and AC valves around the servo amplifier. Attach diodes to DC relays and DC valves.
Example) Surge killer: CR-50500 (manufactured by Okaya Electric Industries Co., Ltd.)
           Diode: A diode with breakdown voltage four or more times greater than the relay drive voltage, and with current capacity two or more times greater than the relay drive current.

Surge Protector

Attach surge protectors of RSPD series (manufactured by Okaya Electric Industries Co., Ltd.) or LT-CS-WS series (manufactured by Soshin Electric Co., Ltd.) to the servo amplifiers.

Options/Peripheral Equipment

EMC Filter

`G` `G-RJ` `WG` `A` `A-RJ`

The following filters are recommended as a filter compliant with the EMC directive for the power supply of the servo amplifier.
A surge protector is separately required to use the filters. Refer to "EMC Installation Guidelines" for details.
Fulfill the following requirements when connecting several units of servo amplifiers to one EMC filter.
・Rated voltage [V] of EMC filter ≥ Rated input voltage [V] of servo amplifier
・Rated current [A] of EMC filter ≥ Total rated input current [A] of servo amplifiers connected to EMC filter

Operating environment	Total length of servo motor power cables	EMC Filter						
		Model	Rated current [A]	Rated voltage [V AC]	Operating temperature [°C]	Mass [kg]	Fig.	Manufacturer

Power Factor Improving DC Reactor (FR-HEL)

| G | G-RJ | A | A-RJ |

This boosts the power factor of servo amplifier and reduces the power supply capacity.
Use either the DC reactor or the AC reactor.
As compared to the AC reactor (FR-HAL), the DC reactor (FR-HEL) is more recommended since the DC reactor is more effective in power factor improvement, smaller and lighter, and its wiring is easier. (The DC reactor uses two wires, while the AC reactor uses six wires.)

Servo amplifier model	Power factor improving DC reactor model	Fig.
MR-J5-10G/A	FR-HEL-0.4K	A
MR-J5-20G/A		
MR-J5-40G/A	FR-HEL-0.75K

MR Configurator2 (SW1DNC-MRC2-E) (Note 1)

| G | G-RJ | WG | A | A-RJ |

MR Configurator2 can be obtained by either of the following:
- Purchase MR Configurator2 alone.
- Purchase GX Works3, EM78 SDK (available soon), or MT Works2: MR Configurator2 is included in GX Works3, EM78 SDK, and MT Works2 with software version 1.34L or later.
- Download MR Configurator2: If you have MELSOFT iQ Works, GX Works3, GX Works2, MT Works2, EM Software Development Kit, or CW Configurator, MR Configurator2 is available for free download.

Specification (Note 2)

Item	Description
Project	New/Open/Save/Save As/Delete Project, Read Other Format, Write Other Format, System Setting, Print
Parameter	Parameter setting, axis name setting, parameter converter
Safety	Safety parameter setting, Change password, Initialize password
Positioning-data	Point Table, Program, Indirect Addressing, Cam Data
Monitor	Display All, I/O Monitor, Graph, ABS Data Display
Diagnosis	Alarm Display, Alarm Onset Data, Drive recorder, No Motor Rotation, System Configuration, Life Diagnosis, Machine Diagnosis, Linear Diagnosis
Test Operation	JOG Operation, Positioning Operation, Motor-Less Operation, DO Forced Output, Program Operation, Single-Step Feed, Test Operation Information
Adjustment	One-Touch Tuning, Tuning, Machine Analyzer, Advanced Gain Search
Others	Servo Assistant, Update Parameter Setting Range, Machine Unit Conversion Setting, Switch Display Language, Help

Notes: 1. MELSERVO-J5 series is supported by MR Configurator2 with software version 1.100E or later.
2. Supported items vary depending on the servo amplifiers. Refer to "MR Configurator2 SW1DNC-MRC2-E Installation Guide" for details.

8 Low-Voltage Switchgear/ Wires

G MR-J5-G   G-RJ MR-J5-G-RJ   WG MR-J5W2-G/MR-J5W3-G   A MR-J5-A   A-RJ MR-J5-A-RJ

* Only MR-J5-G and MR-J5-A are mentioned for the 1-axis servo amplifiers in this section. Note that options necessary for servo amplifiers with special specification are the same as those for standard servo amplifiers. Refer to the servo amplifiers with the same rated capacity.
* MR-J5-G-RJ and MR-J5-A-RJ are planned for a future release.
* Refer to p. 7-55 in this catalog for conversion of units.

Low-Voltage Switchgear/Wires

Wires, Molded-Case Circuit Breakers, and Magnetic Contactors

The following are examples of wire sizes when 600 V grade heat-resistant polyvinyl chloride insulated wires (HIV wires) are used.
The wire size for U, V, W, and ⏚ varies depending on the servo motor. Refer to "Selection Example in HIV Wires for Servo Motors" in this catalog for details on wires for each servo motor.

Wires and molded-case circuit breakers (MR-J5-G/MR-J5-A)   `G` `G-RJ` `A` `A-RJ`

MR-J5-350G/A	30 A frame 30 A (30 A frame 30 A)				

Magnetic contactor (MR-J5-G/MR-J5-A)   `G` `G-RJ` `A` `A-RJ`

Servo amplifier model	Magnetic contactor (Note 2, 5)	
	On/off of main circuit power supply	
	AC power supply	DC power supply
MR-J5-10G/A MR-J5-20G/A MR-J5-40G/A MR-J5-60G/A MR-J5-70G/A MR-J5-100G/A	S-T10	SD-T12
MR-J5-200G/A MR-J5-350G/A	S-T21	SD-T21

Simple converter (Note 8)   `G` `G-RJ` `WG` `A` `A-RJ`

Simple converter unit model	Molded-case circuit breaker (Note 4, 5)	Magnetic contactor (Note 2, 5)		Wire size [mm²] (Note 4, 7)	
		On/off of main circuit power supply		L1, L2, L3, ⏚	P4/N-
		AC power supply	DC power supply		
MR-CM3K	30 A frame 30 A (30 A frame 30 A)	S-T21	SD-T21	3.5 (AWG 12)	3.5 (AWG 12)

Notes: 1. Keep the wire length to the regenerative option within 5 m.
2. Use a magnetic contactor with an operation delay time of 80 ms or less. The operation delay time is the time interval from current being applied to the coil until closure of contacts.
3. The wire size shows applicable size for the servo amplifier connector.
4. When complying with IEC/EN/UL/CSA standard, refer to "MR-J5 User's Manual" or "MELSERVO-J5 Safety Instructions and Precautions for AC Servos" enclosed with the servo amplifier.
   When using a power improving reactor, use a molded-case circuit breaker listed in the brackets.
5. Install one molded-case circuit breaker and one magnetic contactor for each servo amplifier.
6. Use a molded-case circuit breaker having the operation characteristics equal to or higher than Mitsubishi Electric general-purpose products.
7. Wires are selected based on the highest rated current among the servo motors to be combined.
8. These selection examples are for when one unit of servo amplifier is connected to the simple converter. When connecting multiple servo amplifiers, refer to "MR-J5 User's Manual".

Wires, Molded-Case Circuit Breakers, and Magnetic Contactors

The following are examples of wire sizes when 600 V grade heat-resistant polyvinyl chloride insulated wires (HIV wires) are used. The wire size for U, V, W, and ⏚ varies depending on the servo motor. Refer to "Selection Example in HIV Wires for Servo Motors" in this catalog for details on wires for each servo motor.

Wires (MR-J5W2-G and MR-J5W3-G) `WG`

Servo amplifier model	Wire size [mm²] [Note 3]			
	L1, L2, L3, ⏚	L11, L21	P+, C [Note 5]	U, V, W, ⏚
MR-J5W2-22G	2 (AWG 14)	2 (AWG 14)	2 (AWG 14)	AWG 18 to 14 [Note 2]

Molded-case circuit breakers (MR-J5W2-G) [Note 4] `WG`

Total output of rotary servo motors	Total continuous thrust of linear servo motors	Total output of direct drive motors	Molded-case circuit breaker [Note 3, 6, 7]
300 W or less	-	-	30 A frame 5 A
Over 300 W to 600 W	150 N or less	100 W or less	30 A frame 10 A
Over 600 W to 1 kW	Over 150 N to 300 N	Over 100 W to 252 W	30 A frame 15 A
Over 1 kW to 2 kW	Over 300 N to 720 N	Over 252 W to 838 W	30 A frame 20 A

Magnetic contactor (MR-J5W2-G) [Note 4] `WG`

Total output of rotary servo motors	Total continuous thrust of linear servo motors	Total output of direct drive motors	Magnetic contactor [Note 1, 6]	
			On/off of main circuit power supply	
			AC power supply	DC power supply
300 W or less	-	-	S-T10	SD-T11
Over 300 W to 600 W	150 N or less	100 W or less		
Over 600 W to 1 kW	Over 150 N to 300 N	Over 100 W to 252 W		
Over 1 kW to 2 kW	Over 300 N to 720 N	Over 252 W to 838 W	S-T21	SD-T21

Molded-case circuit breakers (MR-J5W3-G) [Note 4] `WG`

Total output of rotary servo motors	Total continuous thrust of linear servo motors	Total output of direct drive motors	Molded-case circuit breaker [Note 3, 6, 7]
450 W or less	150 N or less	-	30 A frame 10 A
Over 450 W to 800 W	Over 150 N to 300 N	252 W or less	30 A frame 15 A
Over 800 W to 1.5 kW	Over 300 N to 450 N	Over 252 W to 378 W	30 A frame 20 A

Magnetic contactor (MR-J5W3-G) [Note 4] `WG`

Total output of rotary servo motors	Total continuous thrust of linear servo motors	Total output of direct drive motors	Magnetic contactor [Note 1, 6]	
			On/off of main circuit power supply	
			AC power supply	DC power supply
450 W or less	150 N or less	-	S-T10	SD-T11
Over 450 W to 800 W	Over 150 N to 300 N	252 W or less		
Over 800 W to 1.5 kW	Over 300 N to 450 N	Over 252 W to 378 W	S-T21	SD-T21

Notes: 1. Use a magnetic contactor with an operation delay time of 80 ms or less. The operation delay time is the time interval from current being applied to the coil until closure of contacts.
2. The wire size shows applicable size for the servo amplifier connector.
3. When complying with IEC/EN/UL/CSA standard, refer to "MR-J5 User's Manual" or "MELSERVO-J5 Safety Instructions and Precautions for AC Servos" enclosed with the servo amplifier.
4. When two different types of servo motors (rotary servo motor, linear servo motor, or direct drive motor) are connected to the multi-axis servo amplifier, refer to "MR-J5 User's Manual" for selecting a molded-case circuit breaker and a magnetic contactor.
5. Keep the wire length to the regenerative option within 5 m.
6. Install one molded-case circuit breaker and one magnetic contactor for each servo amplifier.
7. Use a molded-case circuit breaker having the operation characteristics equal to or higher than Mitsubishi Electric general-purpose products.

Motor Circuit Breakers

A motor circuit breaker is a device integrating the functions of a molded-case circuit breaker and a thermal overload relay.

Servo amplifier	Rated input voltage AC [V]	Input phase [Note 2]	Motor circuit breakers [Note 3]			SCCR [kA] [Note 1]
			Model	Rated voltage AC [V]	Rated current [A] (Heater design)	
MR-J5-10G/A	200 to 240	3-phase	MMP-T32	240	1.6	50
MR-J5-20G/A					2.5	
MR-J5-40G/A					4	
MR-J5-60G/A					6.3	
MR-J5-70G/A					6.3	
MR-J5-100G/A					8	
MR-J5-200G/A					18	
MR-J5-350G/A					25	25
MR-J5W2-22G					6.3	50
MR-J5W2-44G					8	
MR-J5W2-77G					13	
MR-J5W2-1010G					18	
MR-J5W3-222G					8	
MR-J5W3-444G					13	

Notes: 1. The value is applicable when the motor circuit breaker is combined with the servo amplifier.
2. 1-phase power input is not supported.
3. The combinations of the motor circuit breakers and the servo amplifiers comply with IEC/EN/UL/CSA.

Selection Example in HIV Wires for Servo Motors

The following are examples of wire sizes when 600 V grade heat-resistant polyvinyl chloride insulated wires (HIV wires) with a length of 30 m are used. Refer to "Rotary Servo Motor User's Manual" when using cab-tire cables for supplying power (U, V, and W) to HK-ST series.

Rotary servo motor model		Wire size [mm²] [Note 6]	
		For power and grounding (U, V, W, ⏚) (general environment)	For electromagnetic brake (B1, B2)
HK-KT_W	HK-KT053W	0.75 (AWG 18) [Note 1, 2, 3]	0.2 (AWG 24) [Note 4, 7]

	HK-ST3524W	2 (AWG 14)	
	HK-ST5024W	3.5 (AWG 12)	

Notes: 1. Use fluorine resin wires of 0.75 mm² (AWG 18) for wiring to the servo motor power supply.
2. This size is applicable for wiring length of 10 m or shorter. For over 10 m, use MR-AEPB2J10CBL03M-_-L, MR-AEP2J10CBL03M-_-L, MR-AEPB2J20CBL03M-_-L, or MR-AEP2J20CBL03M-_-L, and extend it with HIV wires of 1.25 mm² (AWG 16).
3. When complying with UL/CSA standard, use MR-AEPB2J10CBL03M-_-L, MR-AEP2J10CBL03M-_-L, MR-AEPB2J20CBL03M-_-L, or MR-AEP2J20CBL03M-_-L, and extend it with HIV wires of 2 mm² (AWG 14).
4. Use fluorine resin wires of 0.2 mm² (AWG 24) for wiring to the electromagnetic brake.
5. When complying with UL/CSA standard, use 2 mm² (AWG 14). Refer to "Rotary Servo Motor User's Manual" for details.
6. The same wire size is applicable when the rated torque and the maximum torque are increased.
7. This size is applicable for wiring length of 10 m or shorter. For over 10 m, extend the wires with HIV wires of 1.25 mm² (AWG 16).

Low-Voltage Switchgear/Wires

Cables for rotary servo motors

Item	Model	Length	Bending life	IP rating	Application
Motor cable (dual cable type/ direct connection type for 10 m or shorter)	MR-AEPB2CBL2M-A1-H	2 m	Long bending life	IP65	For HK-KT Load-side lead With electromagnetic brake wires
	MR-AEPB2CBL5M-A1-H	5 m	Long bending life	IP65	
	MR-AEPB2CBL10M-A1-H	10 m	Long bending life	IP65	
	MR-AEPB2CBL2M-A1-L	2 m	Standard	IP65	
	MR-AEPB2CBL5M-A1-L	5 m	Standard	IP65	
	MR-AEPB2CBL10M-A1-L	10 m	Standard	IP65	
	MR-AEPB2CBL2M-A2-H	2 m	Long bending life	IP65	For HK-KT Opposite to load-side lead With electromagnetic brake wires
	MR-AEPB2CBL5M-A2-H	5 m	Long bending life	IP65	
	MR-AEPB2CBL10M-A2-H	10 m	Long bending life	IP65	
	MR-AEPB2CBL2M-A2-L	2 m	Standard	IP65	
	MR-AEPB2CBL5M-A2-L	5 m	Standard	IP65	
	MR-AEPB2CBL10M-A2-L	10 m	Standard	IP65	
	MR-AEP2CBL2M-A1-H	2 m	Long bending life	IP65	For HK-KT Load-side lead Without electromagnetic brake wires
	MR-AEP2CBL5M-A1-H	5 m	Long bending life	IP65	
	MR-AEP2CBL10M-A1-H	10 m	Long bending life	IP65	
	MR-AEP2CBL2M-A1-L	2 m	Standard	IP65	
	MR-AEP2CBL5M-A1-L	5 m	Standard	IP65	
	MR-AEP2CBL10M-A1-L	10 m	Standard	IP65	
	MR-AEP2CBL2M-A2-H	2 m	Long bending life	IP65	For HK-KT Opposite to load-side lead Without electromagnetic brake wires
	MR-AEP2CBL5M-A2-H	5 m	Long bending life	IP65	
	MR-AEP2CBL10M-A2-H	10 m	Long bending life	IP65	
	MR-AEP2CBL2M-A2-L	2 m	Standard	IP65	
	MR-AEP2CBL5M-A2-L	5 m	Standard	IP65	
	MR-AEP2CBL10M-A2-L	10 m	Standard	IP65	
Motor cable [Note 1] (dual cable type/ junction type for over 10 m)	MR-AEPB2J10CBL03M-A1-L	0.3 m	Standard	IP20	For HK-KT Load-side lead With electromagnetic brake wires
	MR-AEPB2J10CBL03M-A2-L	0.3 m	Standard	IP20	For HK-KT Opposite to load-side lead With electromagnetic brake wires
	MR-AEP2J10CBL03M-A1-L	0.3 m	Standard	IP20	For HK-KT Load-side lead Without electromagnetic brake wires
	MR-AEP2J10CBL03M-A2-L	0.3 m	Standard	IP20	For HK-KT Opposite to load-side lead Without electromagnetic brake wires
Encoder cable [Note 2]	MR-AEKCBL20M-H	20 m	Long bending life	IP20	For HK-KT
	MR-AEKCBL30M-H	30 m	Long bending life	IP20	
	MR-AEKCBL40M-H	40 m	Long bending life	IP20	
	MR-AEKCBL50M-H	50 m	Long bending life	IP20	
	MR-AEKCBL20M-L	20 m	Standard	IP20	
	MR-AEKCBL30M-L	30 m	Standard	IP20	
Motor cable [Note 3] (dual cable type/ junction type for over 10 m)	MR-AEPB2J20CBL03M-A1-L	0.3 m	Standard	IP65	For HK-KT Load-side lead With electromagnetic brake wires
	MR-AEPB2J20CBL03M-A2-L	0.3 m	Standard	IP65	For HK-KT Opposite to load-side lead With electromagnetic brake wires
	MR-AEP2J20CBL03M-A1-L	0.3 m	Standard	IP65	For HK-KT Load-side lead Without electromagnetic brake wires
	MR-AEP2J20CBL03M-A2-L	0.3 m	Standard	IP65	For HK-KT Opposite to load-side lead Without electromagnetic brake wires

Notes:
1. Use this cable in combination with MR-AEKCBL_M-H, MR-AEKCBL_M-L, or MR-ECNM.
2. Use this cable in combination with MR-AEPB2J10CBL03M-_-L or MR-AEP2J10CBL03M-_-L.
3. Use this cable in combination with MR-AENSCBL_M-H, MR-AENSCBL_M-L, or MR-J3SCNS.

	MR-AEP1CBL10M-A2-L	10 m	Standard	IP65	

Notes:

1. When using this cable or connector set for HK-KT series, use it in combination with MR-AEPB2J20CBL03M-_-L or MR-AEP2J20CBL03M-_-L.

Connector sets for rotary servo motors

Item	Model	Description	IP rating	Application
Encoder connector set	MR-ECNM (Note 1)	Junction connector × 1, servo amplifier connector × 1	IP20	For HK-KT
	MR-J3SCNS (Note 2)	Junction connector or encoder connector × 1, servo amplifier connector × 1	IP67	For HK-KT/HK-ST (one-touch connection type)
	MR-ENCNS2	Encoder connector × 1, servo amplifier connector × 1	IP67	For HK-ST (straight type) (screw type)
	MR-J3SCNSA	Encoder connector × 1, servo amplifier connector × 1	IP67	For HK-ST (angle type) (one-touch connection type)
	MR-ENCNS2A	Encoder connector × 1, servo amplifier connector × 1	IP67	For HK-ST (angle type) (screw type)
Power connector set	MR-APWCNS4	Power connector × 1	IP67	For HK-ST52(4)W, 102(4)W, 172(4)W, 202(4)AW, and 302(4)W (one-touch connection type)
	MR-APWCNS5	Power connector × 1	IP67	For HK-ST202(4)W, 352(4)W, and 5024W (one-touch connection type)
Electromagnetic brake connector set	MR-BKCNS1	Electromagnetic brake connector × 1	IP67	For HK-ST (straight type) (one-touch connection type)
	MR-BKCNS2	Electromagnetic brake connector × 1	IP67	For HK-ST (straight type) (screw type)
	MR-BKCNS1A	Electromagnetic brake connector × 1	IP67	For HK-ST (angle type) (one-touch connection type)
	MR-BKCNS2A	Electromagnetic brake connector × 1	IP67	For HK-ST (angle type) (screw type)

Notes:

1. Use this cable in combination with MR-AEPB2J10CBL03M-_-L or MR-AEP2J10CBL03M-_-L.

2. When using this cable or connector set for HK-KT series, use it in combination with MR-AEPB2J20CBL03M-_-L or MR-AEP2J20CBL03M-_-L.

Cables and connector sets for linear servo motors

Item	Model	Description		IP rating	Application
Encoder cable	MR-EKCBL2M-H	2 m	Long bending life	IP20	For connecting a linear encoder
	MR-EKCBL5M-H	5 m	Long bending life	IP20	
Junction cable for linear servo motors	MR-J4THCBL03M	0.3 m	—	—	For branching a thermistor
Encoder connector set	MR-ECNM	Junction connector × 1, servo amplifier connector × 1		IP20	For connecting a linear encoder
	MR-J3CN2	Servo amplifier connector × 1		—	For connecting a linear encoder or a thermistor
Connector set	MR-J3THMCN2	Junction connector × 2, servo amplifier connector × 1		—	For branching a thermistor

Connector sets for direct drive motors

Item	Model	Description	IP rating	Application
Encoder connector set	MR-J3DDCNS	Encoder connector or absolute position storage unit connector × 1, servo amplifier connector × 1	IP67	For TM-RG2M/TM-RU2M/TM-RFM (For connecting a direct drive motor and a servo amplifier, or an absolute position storage unit and a servo amplifier)
	MR-J3DDSPS	Encoder connector × 1, absolute position storage unit connector × 1	IP67	For TM-RG2M/TM-RU2M/TM-RFM (For connecting a direct drive motor and an absolute position storage unit)
Power connector set	MR-PWCNF	Power connector × 1	IP67	For TM-RG2M_, TM-RU2M_, TM-RFM_C20, and TM-RFM_E20
	MR-PWCNS4	Power connector × 1	IP67	For TM-RFM_G20
	MR-PWCNS5	Power connector × 1	IP67	For TM-RFM040J10 and TM-RFM120J10

Connectors for servo amplifiers

Item	Model	Description	IP rating	Application
Connector set	MR-CCN1	Servo amplifier connector × 1	—	For MR-J5-_G
	MR-J2CMP2	Servo amplifier connector × 1	—	For MR-J5W2-_G/ MR-J5W3-_G
	MR-ECN1	Servo amplifier connector × 20	—	
	MR-J3CN1	Servo amplifier connector × 1	—	For MR-J5-_A

Junction terminal blocks/Junction terminal block cables

Item	Model	Length	Application
Junction terminal block (26 pins)	MR-TB26A	—	For MR-J5W2-_G/ MR-J5W3-_G
Junction terminal block (50 pins)	MR-TB50	—	For MR-J5-_A
Junction terminal block cable	MR-J2HBUS05M	0.5 m	For connecting MR-J5-_G and PS7DW-20V14B-F
	MR-J2HBUS1M	1 m	
	MR-J2HBUS5M	5 m	
	MR-TBNATBL05M	0.5 m	For connecting MR-J5W2-_G/ MR-J5W3-_G, and MR-TB26A
	MR-TBNATBL1M	1 m	
	MR-J2M-CN1TBL05M	0.5 m	For connecting MR-J5-_A and MR-TB50
	MR-J2M-CN1TBL1M	1 m	

Batteries/Battery cases/Battery cables

Item	Model	Length	Application
Battery	MR-BAT6V1SET	—	For MR-J5-_G/ MR-J5-_A
	MR-BAT6V1SET-A	—	
	MR-BAT6V1	—	For MR-BAT6V1SET, MR-BAT6V1SET-A, and MR-BT6VCASE
Battery case	MR-BT6VCASE	—	For MR-J5-_G/ MR-J5W2-_G/ MR-J5W3-_G/ MR-J5-_A
Battery cable	MR-BT6V1CBL03M	0.3 m	For connecting MR-J5-_G/ MR-J5W2-_G/ MR-J5W3-_G/ MR-J5-_A, and MR-BT6VCASE
	MR-BT6V1CBL1M	1 m	
Junction battery cable	MR-BT6V2CBL03M	0.3 m	For MR-J5-_G/ MR-J5W2-_G/ MR-J5W3-_G/ MR-J5-_A
	MR-BT6V2CBL1M	1 m	

Regenerative options

Item	Model	Permissible regenerative power	Resistance value	Application
Regenerative option	MR-RB032	30 W	40 Ω	For MR-J5-10G to 60G and MR-J5-10A to 60A
	MR-RB12	100 W	40 Ω	For MR-J5-20G to 60G and MR-J5-20A to 60A
	MR-RB14	100 W	26 Ω	For MR-J5-70G, 100G, MR-J5-70A, 100A, MR-J5W2-22G, 44G, and MR-J5W3-222G, 444G
	MR-RB30	300 W	13 Ω	For MR-J5-200G and MR-J5-200A
	MR-RB3N	300 W	9 Ω	For MR-J5-350G, MR-J5-350A, and MR-J5W2-77G, 1010G
	MR-RB34	300 W	26 Ω	For MR-J5-70G, 100G, MR-J5-70A, 100A, and MR-J5W3-222G, 444G
	MR-RB50	500 W	13 Ω	For MR-J5-200G and MR-J5-200A
	MR-RB5N	500 W	9 Ω	For MR-J5-350G and MR-J5-350A

Peripheral units

Item	Model	Application
Simple converter	MR-CM3K	For MR-J5-10G/A to MR-J5-200G/A, MR-J5W2-22G to MR-J5W2-1010G, MR-J5W3-222G, and MR-J5W3-444G
Absolute position storage unit	MR-BTAS01	For MR-J5-_G/ MR-J5W2-_G/ MR-J5W3-_G/ MR-J5-_A
Replacement fan unit	MR-J5-FAN1	For MR-J5-70G/A and MR-J5-100G/A
	MR-J5-FAN2	For MR-J5-200G/A and MR-J5-350G/A
	MR-J5W-FAN1	For MR-J5W2-44G
	MR-J5W-FAN3	For MR-J5W2-77G and MR-J5W2-1010G
	MR-J5W-FAN2	For MR-J5W3-222G and MR-J5W3-444G

Peripheral cables/Connector sets

Item	Model	Length	Application
Personal computer communication cable (USB cable)	MR-J3USBCBL3M	3 m	For MR-J5-_G/ MR-J5W2-_G/ MR-J5W3-_G/ MR-J5-_A
Monitor cable	MR-ACN6CBL1M	1 m	For MR-J5-_G/ MR-J5-_A
	MR-J3CN6CBL1M	1 m	For MR-J5W2-_G/ MR-J5W3-_G
STO cable	MR-D05UDL3M-B	3 m	For connecting a safety control device with MR-J5-_G/ MR-J5-_A

Servo support software

Item	Model	Application
MELSOFT MR Configurator2 [Note1]	SW1DNC-MRC2-E	Servo setup software for AC servo

Notes:

1. MR Configurator2 is included in GX Works3, EM78 SDK (available soon), and MT Works2 with software version 1.34L or later.
If you have MELSOFT iQ Works, GX Works3, GX Works2, MT Works2, EM Software Development Kit, or CW Configurator, MR Configurator2 is available for free download.
Precautions

For your safety

- To use the products given in this catalog properly, be sure to read the User's Manuals and the appended document prior to use.

Precautions for model selection

- Select a rotary servo motor or a direct drive motor which has the rated torque equal to or higher than the continuous effective torque.
- Select a linear servo motor which has the continuous thrust equal to or higher than the continuous effective load thrust.
- When the linear servo motor is used for vertical axis, it is necessary to have anti-drop mechanism such as spring and counter balance in the machine side.
- When unbalanced torque is generated, such as in a vertical lift machine, keep the unbalanced torque of the machine under 70 % of the servo motor rated torque.
- Create operation patterns by considering the settling time (ts) to complete positioning.
- Load to motor inertia ratio or load to mass ratio must be below the recommended ratio. If the ratio is too large, the expected performance may not be achieved, and the dynamic brake may be damaged.

Speed / Command pattern / Actual servo motor operation / Command time / ts / Time / Positioning time

General safety precautions

1. Transportation/installation

- Combinations of the servo motor and the servo amplifier are predetermined. Confirm the models of the servo motor and the servo amplifier to be used before installation.
- Do not drop or apply strong impact on the servo amplifier and the servo motor as they are precision devices. They may be damaged from such stress or shock.
- When fumigants that contain halogen materials such as fluorine, chlorine, bromine, and iodine are used for disinfecting and protecting wooden packaging from insects, they cause malfunction when entering our products. Please take necessary precautions to ensure that remaining materials from fumigant do not enter our products, or treat packaging with methods other than fumigation (heat method). Additionally, disinfect and protect wood from insects before packing products.
- Do not get on or place heavy objects on the servo amplifier or the servo motor.
- The system must withstand high speeds and high acceleration/deceleration.
- To enable high-accuracy positioning, ensure the machine rigidity, and keep the machine resonance point at a high level.
- Mount the servo amplifier and the servo motor on nonflammable material. Mounting them directly on or near flammable material may result in fires.
- The regenerative option becomes hot (the temperature rise of 100 °C or higher) with frequent use. Do not install within flammable objects or objects subject to thermal deformation. Make sure that wires do not come into contact with the unit.
- Securely fix the servo motor onto the machine.
- Install electrical and mechanical stoppers at the stroke end.
- Mount the servo amplifier vertically on a wall.
- Do not block intake and exhaust areas of the servo amplifier. Doing so may cause the servo amplifier to malfunction.

- When installing multiple servo amplifiers in a row in a sealed cabinet, leave space around the servo amplifiers as described in User's Manuals. To ensure the life and reliability of the servo amplifiers, prevent heat accumulation by keeping space as open as possible toward the top plate.

2. Environment

- Use the servo amplifier and the servo motor in the designated environment.
- Avoid installing the servo amplifier and the servo motor in areas with oil mist or dust. When installing in such areas, be sure to enclose the servo amplifier in a sealed cabinet, and protect the servo motor by furnishing a cover or by taking similar measures.
- Do not use in areas where the servo motor may be constantly subject to cutting fluid or lubricant oil, or where dew could condense because of oil mist, overcooling or excessive humidity. Doing so may deteriorate the insulation of the servo motor.

3. Grounding

- Securely ground to prevent electric shocks and to stabilize the potential in the control circuit.
- Connect the grounding wire to the cabinet protective earth (PE) terminal via the servo amplifier protective earth (PE) terminal for the servo motor grounding.
- Faults such as a position mismatch may occur if the grounding is insufficient.

4. Wiring

- Do not supply power to the output terminals (U, V, and W) of the servo amplifier or the input terminals (U, V, and W) of the servo motor. Doing so damages the servo amplifier and the servo motor.
- Connect the servo motor to the output terminals (U, V, and W) of the servo amplifier.
- Match the phase of the input terminals (U, V, and W) of the servo motor to the output terminals (U, V, and W) of the servo amplifier when connecting them. If they do not match, the servo motor does not operate properly.
- Check the wiring and sequence program thoroughly before switching the power on.
- Carefully select the cable clamping method, and make sure that bending stress and the stress of the cable's own weight are not applied on the cable connection section.
- In an application where the servo motor moves, determine the cable bending radius based on the cable bending life and wire type.

5. Initial settings

- For MR-J5-A(-RJ), select a control mode from position, speed or torque with [Pr. PA01.0]. Position control mode is set as default. Change the parameter setting value when using the other control modes. For MR-J5-G(-RJ) and MR-J5W_-G, the control mode is set by the controller.
- When using the regenerative option, change [Pr. PA02.0-1]. The regenerative option is disabled as default.

6. Operation

- Do not use a product which is damaged or has missing parts. In that case, replace the product.
- Turn on FLS and RLS (Upper/Lower stroke limit), or LSP and LSN (Forward/Reverse rotation stroke end) in position or speed control mode. The servo motor will not start if the signals are off.
- When a magnetic contactor is installed on the primary side of the servo amplifier, do not perform frequent starts and stops with the magnetic contactor. Doing so may damage the servo amplifier.

- When an error occurs, the servo amplifier stops outputting the power with activation of the protective function, and the servo motor stops immediately with the dynamic brake.
- The dynamic brake is a function for emergency stop. Do not use it to stop the servo motor in normal operations.
- As a rough guide, the dynamic brake withstands 1000 times of use when a machine which has load to motor inertia ratio equals to or lower than the recommended ratio stops from the rated speed every 10 minutes.
- When an error occurs, ensure safety by turning the power off, etc., before dealing with the error. Otherwise, it may cause an accident.
- If the protective functions of the servo amplifier activate, turn the power off immediately. Remove the cause before turning the power on again.
- The servo amplifier, the regenerative resistor, and the servo motor can be very hot during or after operation. Take safety measures such as covering them to prevent your hand and/or parts including cables from coming in contact with them.
- Do not touch the servo amplifier, the regenerative resistor, or the servo motor while the power is on or for a while after the power is turned off. Otherwise, an electric shock may occur. Make sure that the charge light is off, and check the voltage between P+ and N- with a voltage tester before wiring or inspection.
- In a maintenance inspection, make sure that the emergency stop circuit operates properly such that an operation can be stopped immediately and a power can be shut off by the emergency stop switch.

7. Others
- Do not touch the servo amplifier or the servo motor with wet hands.
- Do not modify the servo amplifier or the servo motor.

Precautions for Ethernet cables

- Do not apply excessive tension on the Ethernet cable when cabling.
- Refer to relevant Ethernet cable manual to keep the bending radius within the range of specifications.
- Avoid laying the Ethernet cables and the power cables side by side or do not bundle them together. Separate the Ethernet cables from the power cables.

Precautions for rotary servo motors and direct drive motors

- Do not hammer the shaft of the rotary servo motor and the rotor of the direct drive motor when installing a pulley or a coupling. Doing so may damage the encoder. When installing the pulley or the coupling to the key shaft servo motor, use the screw hole on the shaft end. Use a pulley extractor when removing the pulley.
- Do not apply a load exceeding the tolerable load onto the rotary servo motor shaft or the direct drive motor rotor. The shaft or the rotor may break.

- When the rotary servo motor is mounted with the shaft vertical (shaft up), take measures on the machine side so that oil from the gear box does not get into the servo motor.
- Mount the geared servo motor in a direction described in "Rotary Servo Motor User's Manual".
- When the direct drive motor is used in a machine such as vertical axis which generates unbalanced torque, be sure to use it in absolute position detection system.
- Do not use the 24 V DC interface power supply for the electromagnetic brake. Provide a dedicated power supply to the electromagnetic brake.
- Do not apply the electromagnetic brake when the servo is on. Doing so may cause the servo amplifier overload or shorten the brake life. Apply the electromagnetic brake when the servo is off.
- Torque may drop due to temperature increase of the rotary servo motor or the direct drive motor. Be sure to use the motor within the specified ambient temperature.

Precautions for linear encoders

- If the linear encoder is improperly mounted, an alarm or a positioning deviation may occur. Refer to the following general inspections of linear encoder to verify the mounting state. Contact the relevant linear encoder manufacturers for more details.
- General inspections of linear encoder
  (a) Verify that the gap between the linear encoder head and the linear encoder is appropriate.
  (b) Check for any rolling or yawing (looseness) on the linear encoder head.
  (c) Check for contaminations and scratches on the linear encoder head and scale surface.
  (d) Verify that vibration and temperature are within the specified range.
  (e) Verify that the speed is within the tolerable range even when overshooting.

Precautions

Precautions for linear servo motors

- The linear servo system uses powerful magnets on the secondary side. Magnetic force is inversely proportional to the square of the distance from the magnetic material. Therefore, the magnetic force will be significantly stronger as closer to the magnetic material. Persons installing the linear servo motor as well as operating the machine must be fully cautious. Persons with pacemakers or other medical devices must keep away from the machine.
- Keep cell phones, watches, calculators and other products which may malfunction or fail due to the magnetic force away from the machine. Avoid wearing metals including earrings and necklaces when handling the machine.
- Place a caution sign such as "CAUTION! POWERFUL MAGNET" to give warning against the machine.
- Use non-magnetic tools, when installing or working near the linear servo motor.
  e.g., explosion-proof beryllium copper alloy safety tools
    (BEALON manufactured by NGK Insulators, Ltd.)
- The permanent magnets on the secondary side generate attraction force, and there is a risk that your hand may be caught. Handle the linear servo motor carefully to avoid serious injury especially when installing the primary side after installing the secondary side.
- If the linear servo motor is used in such an environment where there is magnetic powder, the powder may adhere to the permanent magnets of the secondary side and cause a damage. In that case, take measures to prevent the magnetic powder or pieces from being attracted to the permanent magnets of the secondary side or from going into the gap between primary side and secondary side.
- The linear servo motor is rated IP00. Provide protection measures to prevent dust and oil, etc., as necessary.
- Install the moving part in such manner that the center of gravity of the moving part comes directly above the center of the primary side.
- Lead wires or cables led from the primary side do not have a long bending life. Fix the lead wires or cables to a moving part to prevent the lead wires or cables from repetitive bending.
- Increase in the temperature of the linear servo motor causes a thrust drop. Be sure to use the motor within the specified ambient temperature.

Disposal of linear servo motors

- Dispose the primary side as industrial waste.
- Demagnetize the secondary side with a heat of 300 °C or higher, and dispose as industrial waste. Please contact your local sales office if you have any questions about disposal.
- Do not leave the product unattended.

For safety standard certification

Even though the MR-J5 series servo amplifiers are certified to various safety standards, this does not guarantee that the systems in which they are installed will also be certified. The entire system shall observe the following:

(1) For safety circuits, use parts and/or devices whose safety are confirmed or which satisfy safety standards.
(2) For details regarding the use of the servo amplifiers and other cautionary information, refer to relevant User's Manuals.
(3) Perform risk assessment on the entire machine/system. It is recommended to use a Certification Body for final safety certification.

Servo system controller

Warranty

1. Warranty period and coverage

We will repair any failure or defect (hereinafter referred to as "failure") in our FA equipment (hereinafter referred to as the "Product") arisen during warranty period at no charge due to causes for which we are responsible through the distributor from which you purchased the Product or our service provider. However, we will charge the actual cost of dispatching our engineer for an on-site repair work on request by customer in Japan or overseas countries. We are not responsible for any on-site readjustment and/or trial run that may be required after a defective unit is repaired or replaced.

[Term]

For terms of warranty, please contact your local FA center.

[Limitations]

(1) You are requested to conduct an initial failure diagnosis by yourself, as a general rule.
It can also be carried out by us or our service company upon your request and the actual cost will be charged.
However, it will not be charged if we are responsible for the cause of the failure.

(2) This limited warranty applies only when the condition, method, environment, etc. of use are in compliance with the terms and conditions and instructions that are set forth in the instruction manual and user manual for the Product and the caution label affixed to the Product.

(3) Even during the term of warranty, the repair cost will be charged on you in the following cases;

(i) a failure caused by your improper storing or handling, carelessness or negligence, etc., and a failure caused by your hardware or software problem

(ii) a failure caused by any alteration, etc. to the Product made on your side without our approval

(iii) a failure which may be regarded as avoidable, if your equipment in which the Product is incorporated is equipped with a safety device required by applicable laws and has any function or structure considered to be indispensable according to a common sense in the industry

(iv) a failure which may be regarded as avoidable if consumable parts designated in the instruction manual, etc. are duly maintained and replaced

(v) any replacement of consumable parts (battery, fan, smoothing capacitor, etc.)

(vi) a failure caused by external factors such as inevitable accidents, including without limitation fire and abnormal fluctuation of voltage, and acts of God, including without limitation earthquake, lightning and natural disasters

(vii) a failure generated by an unforeseeable cause with a scientific technology that was not available at the time of the shipment of the Product from our company

(viii) any other failures which we are not responsible for or which you acknowledge we are not responsible for

2. Term of warranty after the stop of production

(1) We may accept the repair at charge for another seven (7) years after the production of the product is discontinued. The announcement of the stop of production for each model can be seen in our Sales and Service, etc.

(2) Please note that the Product (including its spare parts) cannot be ordered after its stop of production.

3. Service in overseas countries

Our regional FA Center in overseas countries will accept the repair work of the Product. However, the terms and conditions of the repair work may differ depending on each FA Center. Please ask your local FA Center for details.

4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:

(1) Damages caused by any cause found not to be the responsibility of Mitsubishi.

(2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.

(3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.

(4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

5. Change of Product specifications

Specifications listed in our catalogs, manuals or technical documents may be changed without notice.

6. Application and use of the Product

(1) For the use of our Motion module, its applications should be those that may not result in a serious damage even if any failure or malfunction occurs in Motion module, and a backup or fail-safe function should operate on an external system to Motion controller/Simple Motion module when any failure or malfunction occurs.

(2) Our Motion module is designed and manufactured as general purpose product for use at general industries.
Therefore, applications substantially influential on the public interest for such as atomic power plants and other power plants of electric power companies, and also which require a special quality assurance system, including applications for railway companies and government or public offices are not recommended, and we assume no responsibility for any failure caused by these applications when used.
In addition, applications which may be substantially influential to human lives or properties for such as airlines, medical treatments, railway service, incineration and fuel systems, man-operated material handling equipment, entertainment machines, safety machines, etc. are not recommended, and we assume no responsibility for any failure caused by these applications when used.
We will review the acceptability of the abovementioned applications, if you agree not to require a specific quality for a specific application. Please contact us for consultation.

Precautions before use

This publication explains the typical features and functions of the products herein and does not provide restrictions or other information related to usage and module combinations. Before using the products, always read the product user manuals. Mitsubishi Electric will not be held liable for damage caused by factors found not to be the cause of Mitsubishi Electric; opportunity loss or lost profits caused by faults in Mitsubishi Electric products; damage, secondary damage, or accident compensation, whether foreseeable or not, caused by special factors; damage to products other than Mitsubishi Electric products; or any other duties.

⚠ **For safe use**

- To use the products given in this publication properly, always read the relevant manuals before beginning operation.
- The products have been manufactured as general-purpose parts for general industries, and are not designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the products for special purposes such as nuclear power, electric power, aerospace, medicine or passenger-carrying vehicles, consult with Mitsubishi Electric.
- The products have been manufactured under strict quality control. However, when installing the products where major accidents or losses could occur if the products fail, install appropriate backup or fail-safe functions in the system.

CC-Link IE TSN   MELSOFT

YOUR SOLUTION PARTNER
Mitsubishi Electric offers a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines.

A NAME TO TRUST

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation is active in space development, transportation, semi-conductors, energy systems, communications and information processing, audio visual equipment and home electronics, building and energy management and automation systems, and has 237 factories and laboratories worldwide in over 121 countries.

This is why you can rely on Mitsubishi Electric automation solution - because we know first hand about the need for reliable, efficient, easy-to-use automation and control in our own factories.

As one of the world's leading companies with a global turnover of over 4 trillion Yen (over $40 billion), employing over 100,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

Low voltage: MCCB, MCB, ACB
Medium voltage: VCB, VCC

Power monitoring, energy management

Compact and Modular Controllers

Inverters, Servos and Motors

Visualisation: HMIs

Numerical Control (NC)
