

Strain Gauge Converter KFD2-WAC2-Ex1.D

- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- Strain gauge input (full or half bridge)
- Output 0 mA ... ± 20 mA or 0 V ... ± 10 V
- 2 relay contact outputs
- Programmable high/low alarm
- Configurable by PACTware or keypad
- RS-485 interface
- Line fault detection (LFD)

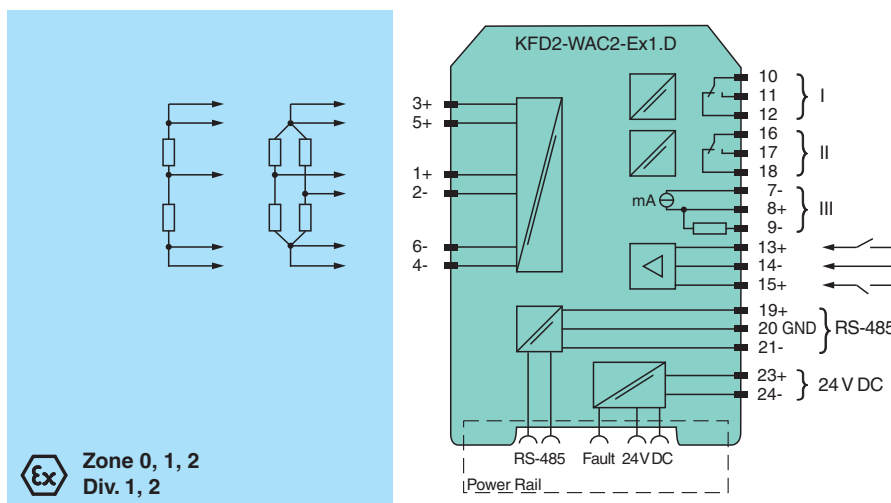

Function

This isolated barrier is used for intrinsic safety applications. The device is used with strain gauges, load cells and resistance measuring bridges. Designed to provide 5 V excitation voltage, this barrier's high quality A/D converter allows it to be used with those devices requiring 10 V. Up to four 350 Ω strain gauges connected in parallel may be powered and evaluated. The device is easily configured by the use of keypad or with the PACTware configuration software. The current measurement for tare, zero point, and final value can be entered in this manner. A fault is signaled by LEDs and a separate collective error message output. For additional information, refer to the manual and www.pepperl-fuchs.com.

Application

Single or parallel connection of strain gauges with resulting resistance between 116 Ω to 10 k Ω can be connected and will provide a 4 mA to 20 mA output and 2 relay outputs as well as an RS-485 interface in the non-hazardous area. The device supports the transmission of measured values via the RS-485 interface. In this mode of operation, input signal range may be transmitted with 20 bit resolution with up to 31 signal converters connected to the Power Rail UPR-05 or via terminals 19, 20 and 21. RS-485 communication may be done via the Power Rail when using power feed modules with bus access, e. g. KFD2- EB2.R4A.B or via the terminals 19, 20 and 21 of one module. The device is addressed via keypad and display or with a PC with PACTware and adapter K-ADP-USB. For additional information, refer to the manual and www.pepperl-fuchs.com.
