- Easy scanner connection by means of clamp terminals

PROFIBUS Connector box for barcode scanner

### Function

Devices from the CBX\* series enable RS232- and RS485-compatible devices to be connected quickly and easily. A wide variety of connections also allows other field devices to be connected.

By reducing installation time and the number of system failures when a device is replaced, your operating costs will be significantly lower. Standardized pinning of connections and simple attachment of cable ends using spring terminals ensures easy cable installation. The configuration of the connected scanner can be saved in backup modules and restored at a later date.

To facilitate installation of the device, the continuous mounting holes are easy to access and the top section of housing can be removed.

Note: Avoid mechanical stress, such as screwing the housing cover together, in deep-freeze areas.
