

Safety control unit SB4-OR-4CP-B-B-B-B

- Evaluation device for safety thru-beam sensors SLA12 and SLA29 and for 2 channel safety devices (emergency off)
- Expansion slots for SB4 modules for optional enhanced functionality
- Self-monitoring (type 4 according to IEC/EN 61496-1)
- Operating mode can be selected by means of DIP switches
- 7-segment diagnostic display
- Safety outputs OSSD, external status displays OSSD

SB4 series safety control unit with optional module slots for functional enhancement

Dimensions

| Model number | Number of | Housing width X |
|----------------------|----------------|-----------------|
| | optional slots | [mm] |
| SB4-OR-4CP-B | 1 | 67.8 |
| SB4-OR-4CP-B-B | 2 | 90.4 |
| SB4-OR-4CP-B-B-B | 3 | 113 |
| SB4-OR-4CP-B-B-B-B | 4 | 135.6 |
| SB4-OR-4CP-B-B-B-B-B | 5 | 180.8 |
| | | |

| | SLA29/73c | Safety thru-beam sensor |

The operating instructions that accompany the unit must be observed during planning, installation and operation.

The SB4 evaluation system is a type 4 (EN 61496-1 or IEC 61496-1) and category 4 (EN 954-1) AOPD. This system has also been designed and tested in accordance with IEC 61508. The system meets the requirements of SIL3.

At most 4 safety thru-beam sensors can be connected to the control interface in the default setting. Other contact-equipped safety devices can be connected instead of the thru-beam sensors.

The control interface has empty slots. They are used for individual function extensions with SB4 modules.

The following SB4 modules can be employed:

- SB4 modules 4C:SB4 modules 4C in various versions.
 - SB4 module for connecting four 2-wire sensors
- SB4 modules 4X:SB4 modules 4X in various versions.
 - SB4 module for connecting 3-wire sensors and safety devices with semiconductor switching outputs
- SB4 modules 6C:SB4 modules 6C in various versions.
 - SB4 module for connecting six 2-wire sensors
- SB4 modules 2E:SB4 modules 2E in various versions.

Additional 2 OSSDs, relay monitoring, restart connection and 2 connections for contact-equipped safety signals (e.g. emergency off switch), timer functions

- · SB4 modules 4M:SB4 modules 4M in various versions.
 - Muting module for connecting up to 4 muting sensors

Operating modes

The startup/restart interlock is activated by default.

All groups feature DIP switches to select the functions. Two switches must always be actuated in order to select a function. Switches on the first group:

| Switch | Position | Operating mode |
|---------|----------|---|
| 1 and 3 | OFF | Without startup/restart interlock (restart, RI) |
| | ON | With startup/restart interlock (restart, RI) |
| 2 and 4 | OFF | Without relay monitor (RM) |
| | ON | With relay monitor (RM) |

Switches on the second group:

| Switch | Position | Operating mode |
|---------|----------|---------------------------------|
| 1 and 3 | OFF | No complementary evaluation |
| | ON | Complementary evaluation active |
| 2 and 4 | OFF | No simultaneous evaluation |
| | ON | Simultaneous evaluation active |

Indicators

The OSSD-R/supply module in position 1 features a red/green LED to signal the OSSD off/on statuses, a yellow LED to indicate the "Ready for startup" status and a 7-segment display for system diagnostics.

The 7-segment display signals the system status and error codes.

| 7-segment display | | |
|--|--|--|
| | | |
| DIP switch setting not identical | | |
| Incorrect configuration | | |
| Time-out of one or more muting sensors | | |
| Transmitter fault | | |
| Muting lamp fault | | |
| Simultaneous monitoring fault | | |
| Receiver fault | | |
| Sensor channel fault | | |
| System fault | | |
| Relay monitor fault | | |
| Selection chain fault | | |
| Under/overvoltage detected | | |
