Concept of operation Teach-in dynamic via plus/minus buttons

1. Position label or substrate in the active area of the fork sensor

Press both the “+” and “-” buttons together, hold > 1 s and then release the teach-in buttons. The red LED flashes.

2. Move multiple labels through the fork sensor

Press “-” button, teach-in process is finished.

Notes

Switching threshold adaptation:

Only, the first teach-in procedure after switching on is permanently stored. Teach-in can be repeated cyclically. Switching output also during teach-in active.

[+] Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “-” button. To make minor adjustments, press the “+” or “-” button once. To configure settings quickly, keep the “+” or “-” button pressed for longer.

$\pm \frac{Q/D}{3s}$ Press both the “+” and “-” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

$\pm \frac{L/D}{6s}$ Press both the “+” and “-” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting: Q = light switching.

Teach-in (static): Setting the switching threshold without movements of label, cf. operating instruction.
