## Concept of operation Teach-in

The switching threshold is set automatically. Fine adjustment is possible using the “+”/“–” buttons.

### 1. No object or substrate in the beam path

Press the “+” and “–” buttons together and hold for 1 second. The red function indicator flashes slowly.

### 2. Object or label in the beam path

Press the “–” button for 1 second. Red function indicator goes out.

## Notes

Material speed = 0 (machine at a standstill).

-  Once teach-in process is complete, the switching threshold can be adjusted at any time using the “+” or “–” button. To make minor adjustments, press the “+” or “–” button once.
-  To configure settings quickly, keep the “+” or “–” button pressed for longer.

 Press both the “+” and “–” buttons together (3 seconds) to lock the device and prevent unintentional actuation.

 Press both the “+” and “–” buttons together (6 seconds) to define the switching function (light/dark switching). Standard setting:  $\bar{Q}$  = light switching.
