## OUR COMPETENCE IN AN OVERVIEW

Custom backplane

Project management

Development

Test laboratory

### Comprehensive standard backplane programme

AdvancedTCA - MicroTCA - CompactPCI - CompactPCI Serial - PXIe - VPX - VME - Schroff offers you an extensive standard backplane programme that is already ideally matched to your requirements. Should you still not find your backplane in our range, we can develop or modify to create your tailor-made backplane, quickly and on attractive terms. All our developing and manufacturing is done in-house and competent personnel are available at any time to deal with technical questions, quotes and project support.

### Custom development to customer requirements

From minor modifications to our standard backplanes through to specific form factors and connection topologies, Schroff has the right solution for you

### One contact partner as customer interface

Competent personnel are available at any time for technical questions, quotes, project support and after-sales care. If you wish, we are also happy to help you generate the specification for your custom backplane. Contact at an early stage between our technical staff and our customers helps us to develop cost-optimised projects that meet all our customers' requirements.

### Many years of experience

60 years of experience, continual fundamental research and innovation in the backplane sector. Active participation in standards committees and in the specification of new system architectures and high-speed transmission technologies.

### Modern design tools

Modern simulation tools and measurement equipment plus in-house developed high-performance test adaptors. Development of new technologies and topologies using high-speed measurements performed in-house.

## OUR COMPETENCE IN AN OVERVIEW

Solder paste printing

Automatic optical inspection (AOI)

Connector mounting

Conformal coating

Electrical final test

### Modern machine facilities in Straubenhardt

**Solder paste printing** is one of the quality-defining process steps in backplane manufacture. This solder-paste printer, based on innovative inkjet technology, allows fast, flexible and highly dependable solder paste printing. Since the process dispenses with the 'stencils' required by other methods, the printing program can be changed in a very short time. This means that small batches can also be printed cost-effectively.

Our modern **SMD placement machines** support a wide spectrum of components with a high placement performance. Small and large production runs can be implemented flexibly and time-efficiently.

**Vapour-phase soldering**, also known as vapour-phase reflow, is currently the most universal and most reliable soldering process. It is ideally suited to all types of SMD component and carrier material. The homogenous temperature distribution of the carrier medium allows the widest variety of sub-assemblies, from Flexprints to multilayer boards, to be soldered reliably without danger of overheating.

There is also the option of processing conventional components with our **wave-soldering system** and our **selective wave-soldering system**.

**Automatic optical inspection (AOI)** is an optical test procedure for sub-assemblies equipped with components. Highly-developed image processing systems reliably detect faulty soldered joints and wrongly placed or missing components.

Connectors are pressed into the backplane fully automatically. The **press-in technique** allows quick and economic mounting of the connector without subjecting the PCB to thermal stress. The press-in action creates a gas-tight, dependably electrically conductive and mechanically strong connection. Intelligent force/displacement measuring during the press-in action ensures consistent high quality.

Backplanes and boards that are subject to particular climatic stresses can be coated with a **protective lacquer (conformal coating)**. This coating protects the backplane from e.g. corrosion and mould. The fluorescent characteristic of the protective coating enables the coating to be checked for completeness or damage under UV light. The protective lacquer used on our automated coating machine is UL 94 V0 compliant, halogen free and conform to EN 45545-2, (HL1...HL3, R25)

No backplane leaves our production facility without **100% testing**. All backplanes are subjected to extensive electrical testing before despatch. An automatic process checks the entire backplane for continuity and short circuits. This testing also covers passive and simple active components such as resistors, capacitors and diodes and the description and testing of I2C EEPROMS or bus terminations. For this Schroff has a comprehensive automated and semi-automated testing facility.

## COMPACTPCI SERIAL BACKPLANES

12415020

- Conforms to PICMG CompactPCI Serial (CPCI-S.0 R2.0) specification
- 1 system slot and 0 ... 8 peripheral slots
- Supports PCIe (Gen3), USB 2.0 and USB 3.0, S-ATA (II & Rev. 3.0) and Ethernet (10GBase-T)
- PCIe: Up to two 8 x lanes and up to six 4 x lanes
- Powerbugs for +12 V payload voltage and Minifit plug for +5 V standby voltage
- Utility connector on rear of backplane
- Mechanical centering and keying/coding strip in stainless steel on every fully equipped front and rear slot
- PICMG 2.9 IPMB plug can be fitted on request

## COMPACTPCI SERIAL POWER BACKPLANE

- Power backplane for pluggable PSUs with FCI Power Blade plug
- 3 U, 8 HP, 1 PSU connector
- Separate inputs for AC and DC with Fastons
- Connector for 12 V, 5 V standby, utility signals, current sharing, power button, serial console to a UPS and digital I/O at the rear
- Optionally, the PICMG 2.9 SMBus plug and additional powerbugs for 12 V and 5 V standby can be fitted
- Geographical address can be set by means of a DIP switch

# Backplanes – CompactPCI

## COMPACTPCI BRIDGES

Photo shows 32-bit bridge

- In accordance with
  - PICMG 2.6 CompactPCI Bridging Specification
  - PCI 2.1 PCI Local Bus Specification, Rev. 2.1
- Bridge mounted on rear of backplane, hence no loss of slots
- Very compact and low bridge shape, no interference with rear transition boards
- Schroff CompactPCI backplanes with system slot right are used as primary backplane
- The 32-bit bridge is 33 MHz capable
- Bridges are designed for primary backplanes with system slot right; bridges for system slot left available on request
- A summary of possible backplane/bridge combinations can be found on the Schroff website

## COMPACTPCI SECONDARY BACKPLANES, SYSTEM SLOT TO RIGHT

12401021

Photo shows primary and secondary backplane with inserted bridge and fitted rear transition board

- In accordance with
  - PICMG 2.0 R3.0 CompactPCI Core Specification
  - PICMG 2.1 R2.0 Hot-swap Specification
  - PICMG 2.9 R1.0 System Management Bus Specification
  - PICMG 2.10 R1.0 Keying Specification
- Secondary backplane for use behind the bridge
- A summary of possible backplane/bridge combinations can be found on the Schroff website
- Secondary backplanes can also be used as tertiary backplanes; change of geographical address see user manual

## MONOLITHIC VME64X BACKPLANES (6 U)

Photo shows 23001-551

Backplane mounting: a: conductive, b: isolated

Connector for additional voltages V1/V2

- In accordance with:  
ANSI/VITA 1-1994 VME64 Standard  
ANSI/VITA 1.1-1997 VME64 Extension Standard  
ANSI/VITA 1.5-2003 VME2eSST Specification  
ANSI/VITA 1.7-2003 Increased Current Level  
ANSI/VITA 38 System Management on VME
- Monolithic backplane, 6 U with J1 and J2 plane
- Termination passive
- Electronic automatic daisy chain (EDC)
- Outstanding high-frequency noise suppression and very high MTBF values due to ceramic capacitors
- Connection or isolation between the digital GND and chassis GND can be effected via the screw fittings (see photo)
- Supply voltages can be applied via powerbugs (ring tag M4) or FASTON
- Utility connector for status signals
- System management bus (SMB) connector in accordance with VITA38
- Connector for additional voltages V1/V2 (see photo)

## POWER BACKPLANE WITH P47 CONNECTOR

01917001

- In accordance with: PICMG 2.11 R1.0 CompactPCI Power Interface specification and PICMG 2.9 R1.0 System Management Bus specification
- Single, parallel or redundant operation possible
- Direct current outlets for high currents with virtually no voltage reduction
- Geographical address adjustable
- Power supply over crimp contacts insertable into the plug, no supply voltage on the backplane
- Power cable available as an accessory
- DC outlets with powerbugs for extremely low drops in voltage

### DELIVERY INCLUDES

Item	Qty.	Description
1	1	Power backplane with P47 connector
2	1	Set, combination screw M4 x 6 in accordance with DIN 6900

## UNIVERSAL BACKPLANES

Universal backplanes with through-connected signal lines, 10 and 21 slot

12096003

Universal backplanes without through-connected signal lines, 21 slots

12006001

### With through-connected signal lines

- Power supply at each connector position (row 1 + 32)
- Adaptation fields for power connections on 2-layer backplanes
- Two versions:
  - 60 signal lines, through-connected from connector to connector (C64), row „b“ can be freely wired (2 layers with C96 connector), wire-wrap
  - 90 signal lines, through-connected from connector to connector

### Without through-connected signal lines

- Individual wiring of connectors is possible since signal lines are not through-connected
- Power supply at each connector position (row 1 + 32)
- Adaptation fields for connections

11100013

11100014

Test adaptor M (F24/H7), a: Measurement lugs, b: Measuring pin with jumper, c: Test bridge, diameter 4 mm

- For DIN 41612 connectors, type M
- M (F/H): with high-current contacts (H)
- Measuring field versions for current and voltage measurement (U/I):
  - M (F/H):
    - F: measurement lugs (a) and measurement pins (b) with jumpers
    - H: test bridges (c) (diameter 4 mm)

### DELIVERY COMPRISES

## TEST ADAPTORS FOR VMEBUS

Photo shows 6 U test adaptor

a: measuring field for current and voltage measurement  
b: Measuring pin, e.g. for test prod

Dimensional drawing of test adaptor

- Layout of conductive tracks and layer build-up match the requirements of the VME bus
- Measuring field version for current and voltage measurement (V/I), (a)
- Additional measuring pins, e.g. for the probe tips of an oscilloscope (b)
- 1 pin position for second test object,  
1 pin position for terminator board
- Voltage supply lines are designed for 2 A
- 6 U test adaptors consist of two 3 U test adaptors linked via an intermediate adaptor

## 6/9 U TEST ADAPTORS

6 U

9 U

A4-2550

- Suitable for types B, C, D, E, F
  - 6 U test adaptor can be made from:
    - 2 x equal length 3 U test adaptors (3/4)
    - 1 x intermediate adaptor 6 U (1)
    - or
    - 1 x 3 U test adaptor (3/4)
    - 1 x bare board (item 2 without connector)
    - 1 x intermediate adaptor 6 U (1)
  - 9 U test adaptor can be made from:
    - 3 x equal length 3 U test adaptors (3/4)
    - 2 x intermediate adaptor 9 U (1)
    - or
    - 2 x 3 U test adaptors (3/4)
    - 1 x bare board (item 2 without connector)
    - 2 x intermediate adaptor 9 U (1)
    - or other combinations
- test adaptor item 4, type x  
bare board: item 3

## TYPE/ BOARD VERSIONS

Epoxy fibreglass EP-GC02 to DIN 40802 (FR4).  
Outlying connections (e.g. pins 1a, b, c and pins 32a, b, c) each have a wider PCB track or large-surface tracks on inner layers – e.g. for shielding, V<sub>CC</sub>, GND.

Type	
1L	PCB single-sided, laminated (suitable for up to 2 MHz)
2L	PCB, double-sided, laminated and through-connected (suitable for up to approx. 8 MHz)
4L	Multi-layer, 4-layer (suitable for above 8 MHz): Multi-layer technology with large-area inner layers (signal-surface-surface-signal). In the coax version the large-area inner layers can be soldered to the desired pins by means of power links.
