

Color Sensor

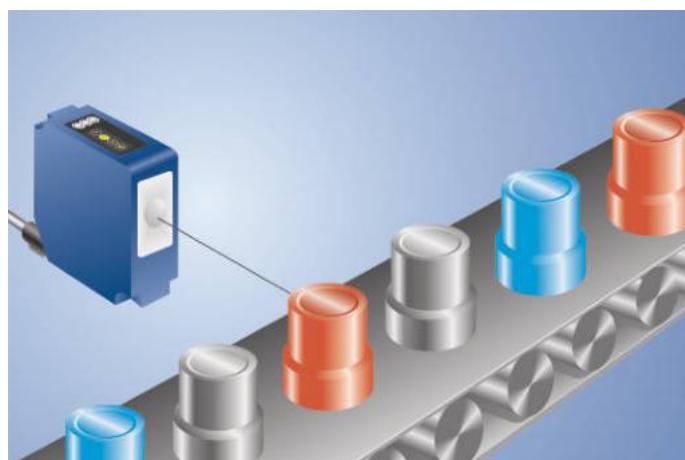

OFP401P0189

Part Number

- Extremely fine color nuances can be recognized
- Reflex mode operation
- Teach-in, external teach-in

This color sensor is capable of evaluating up to three colors simultaneously. A small spot and a large working range are made possible thanks to single-lens optics. All sensor settings can be selected by means of teach-in, as well as via the RS-232 interface. Values generated by the sensor can be read out via the interface or digital switching outputs. The sensor has 3 switching outputs and supplies RGB, XYZ and HSL color values via the interface.
