

Reflex Sensor with Background Suppression

P1NH701 LASER

PNG//smart

- Condition monitoring
- IO-Link 1.1
- Laser class 1
- Recognition of small parts

The reflex sensor with background suppression works with red light according to the angle measurement principle and is suitable for the detection of objects against any background. The sensor always has the same switching distance, regardless of the color, shape and surface of the objects. Minimal height differences can be detected with the sensors and, for example, various parts can be reliably differentiated from each other. The IO-Link interface can be used to configure the reflex sensors (PNP/NPN, NC/NO), as well as for reading out switching statuses.
