S2FP002

Part Number

- **Continuously monitored locking force of 1150 N**
- **Escape release**
- **Performance Level: Cat. 4 PL e**
- **Power to unlock principle**

The electromechanical guard locking device is distinguished by a high, continuously monitored locking force of 1150 N. As a result, only one guard locking device is required in order to fulfill a safety level of category 4 PL e (EN ISO 13849-1). The safety level, as well as reaction time and risk time, remain unchanged when connected in series. Extensive diagnosis functions enhance system availability and simplify installation and maintenance. The unique star handle operating concept is especially well-suited for rotary and sliding doors.
