5 Bare die product specifics

- Switching characteristics and thermal properties are depending strongly on package design and mounting technology and can therefore not be specified for a bare die.
- Test coverage at wafer level cannot cover all application conditions. Therefore, it is recommended to test all characteristics, which are relevant for the application at package level, including RBSOA and SCSOA.
- AQL 0.65 for visual inspection according to failure catalogue.
- Electrostatic discharge sensitive device according to MIL-STD 883.
- Further technical information about the performance of this chip in package PG-TO252-3 is given exemplarily at www.infineon.com/igbt. The chip qualification is independent of the qualification which is performed for the Discretes.
- The example application may be subject to change without prior notice. It is intended for information purposes only, and should not be interpreted as a commitment.
- Example application: IKD06N60RF
