Description

- Inserts of the EPIC® H-BE series are considered classics in industry and are ideal for use at higher voltages and currents.
- In the EPIC® H-BE series, inserts of different connection types can be combined with each other as required within the same size (screw, crimp, cage clamp or push-in).
- Push-in connection allows the shortest connection times: strands with wire end ferrules can be inserted and contacted completely without tools; to release the contact, simply press the orange button. For strands without wire end ferrules, the button must be pressed to open the spring before insertion or removal
- The round test socket for 2mm standard test probes is positioned so that it is still accessible for a signal test even when the insert is already installed in the panel-mounting housing.
- Wide variety of suitable housing variations
